# Interview-based Study

5 professional developers, using a project environment with feeds

2 interview sessions per developer, each 20 – 60 minutes, four days apart

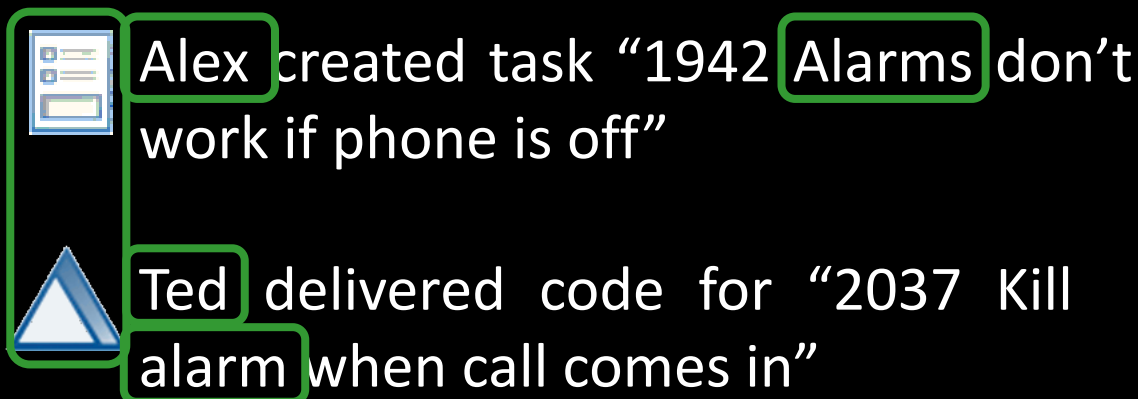

30 recent and randomly selected news items per session from 2 feeds (change set and work items)

➤ Developer statements for each item on relevancy

27% of items relevant, 8% somewhat, 65% not relevant

# Reasons for Identifying News Items as Relevant or Irrelevant

- Content
- Target of Content
- Previous Interaction
- Relation with Creator

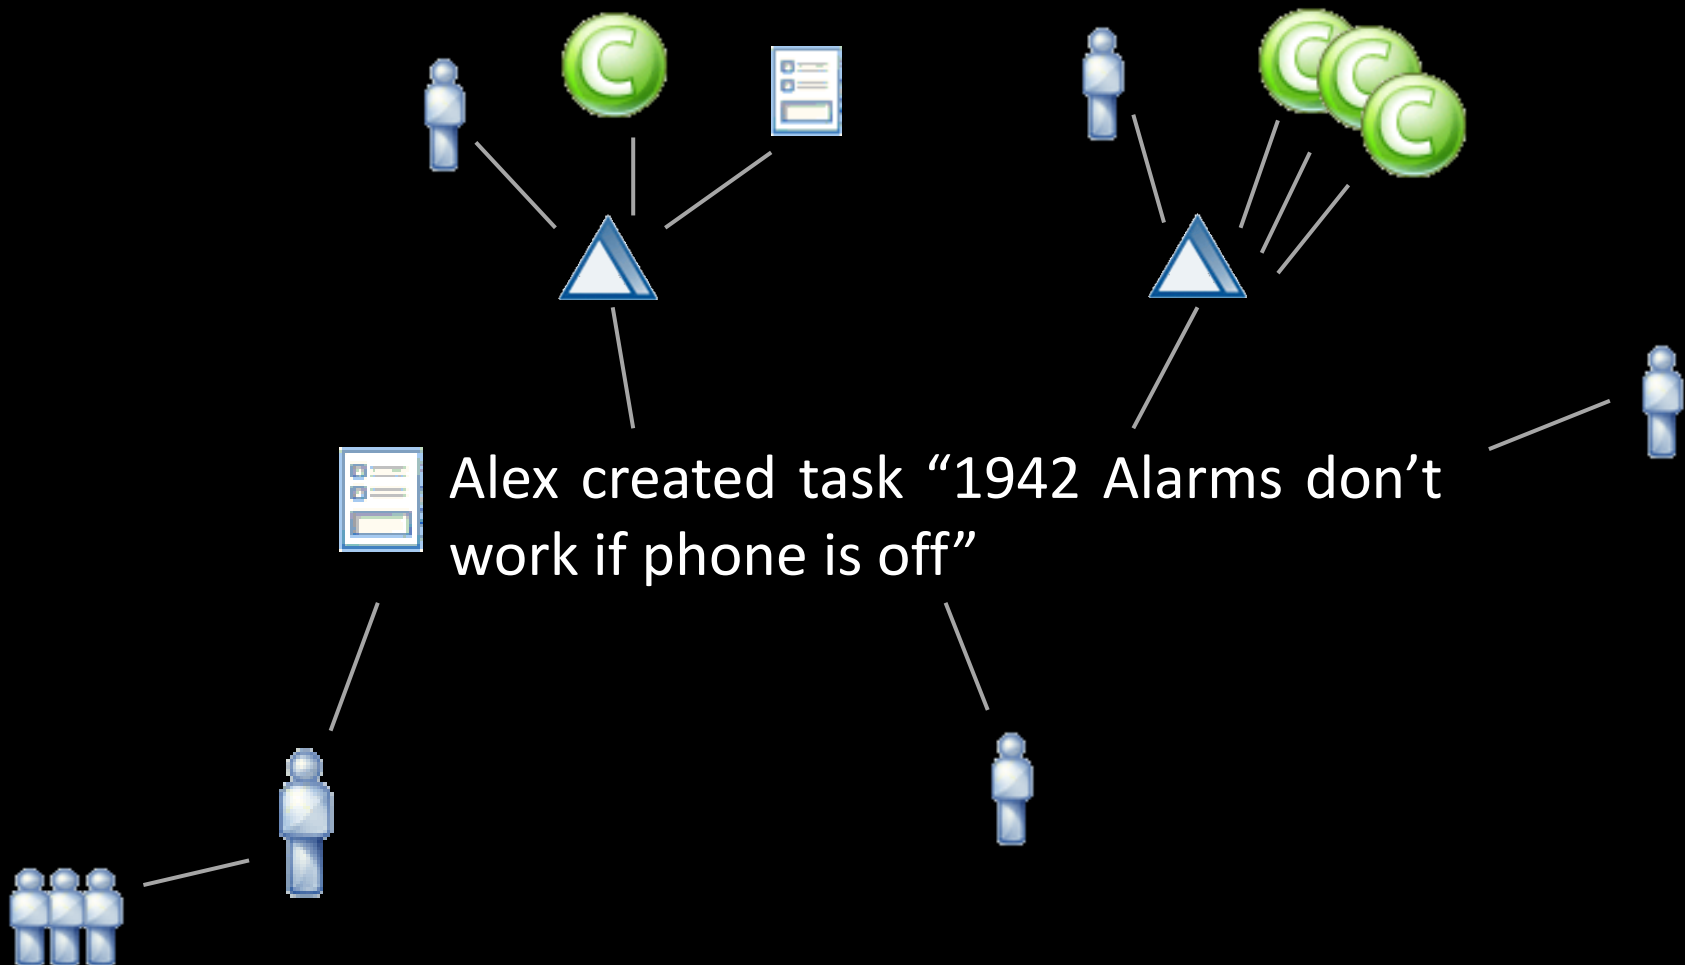

A screenshot of a task creation interface. The interface shows a list of tasks. The first task is "1942 Alarms don't work if phone is off" and the second is "2037 Kill alarm when call comes in". The names of the creators, "Alex" and "Ted", are highlighted with green boxes. The task titles "1942 Alarms" and "2037 Kill alarm" are also highlighted with green boxes. The interface includes a list icon on the left and a blue triangle icon below the first task.

Alex created task "1942 Alarms don't work if phone is off"

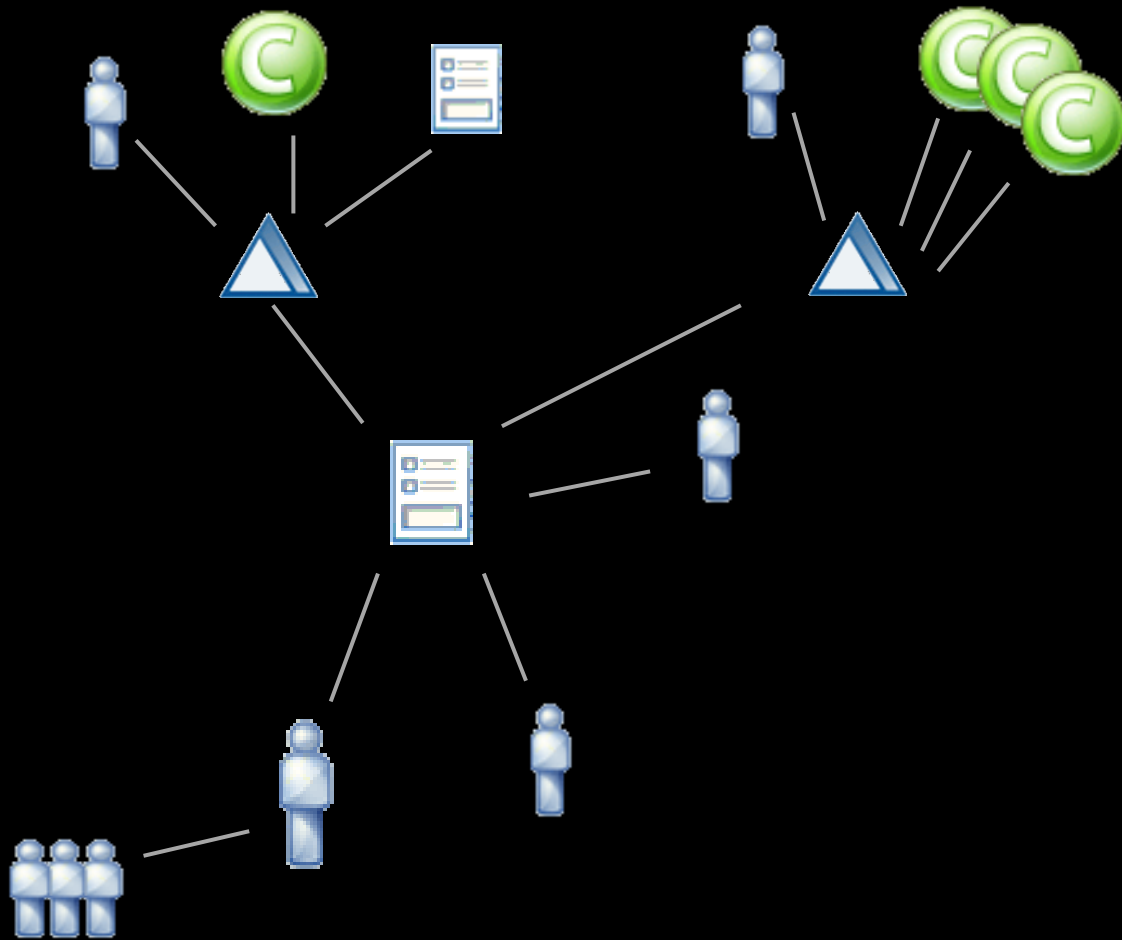

Ted delivered code for "2037 Kill alarm when call comes in"

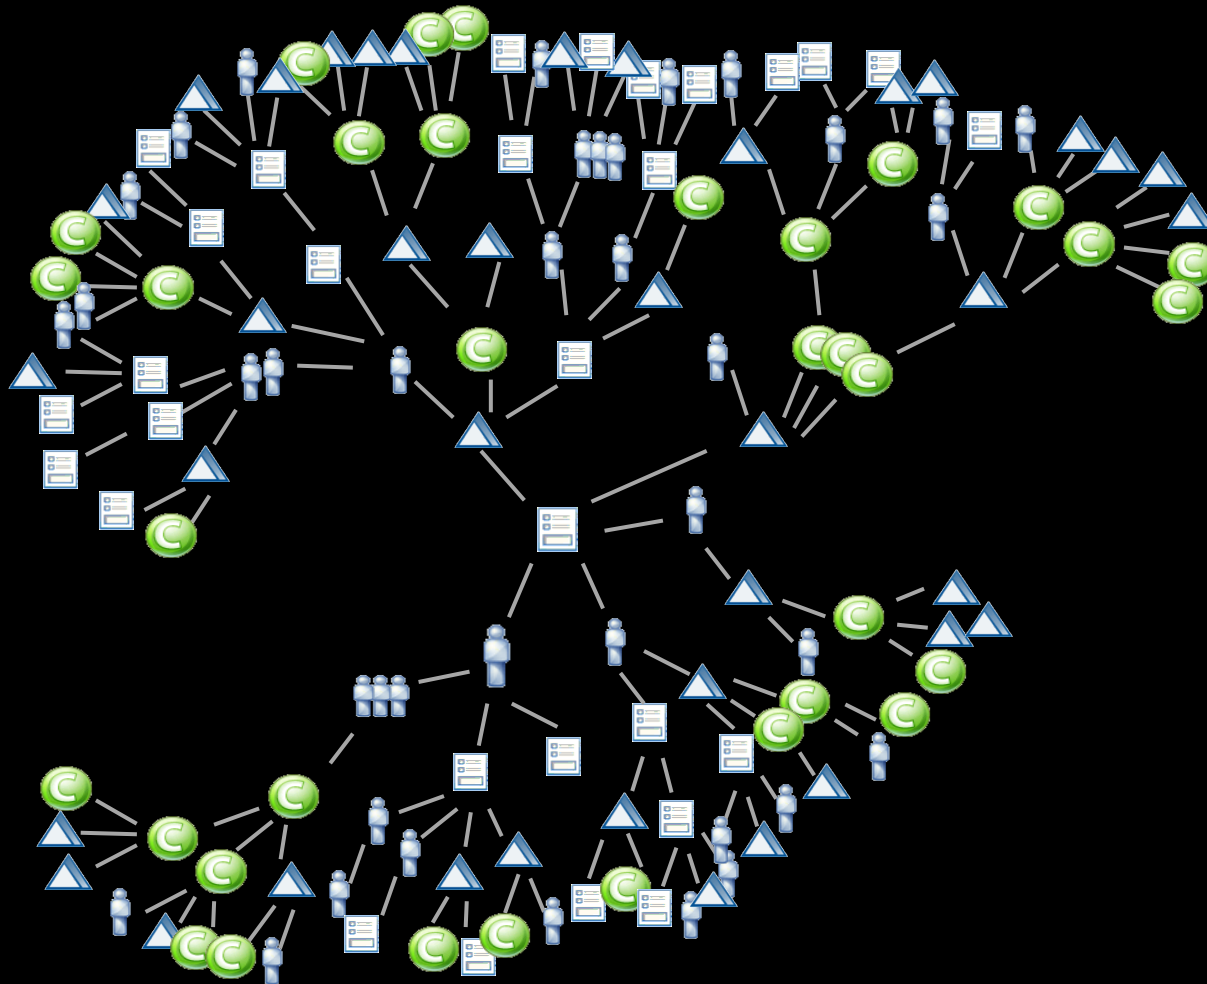

# Information in a Project Environment

# Information in a Project Environment

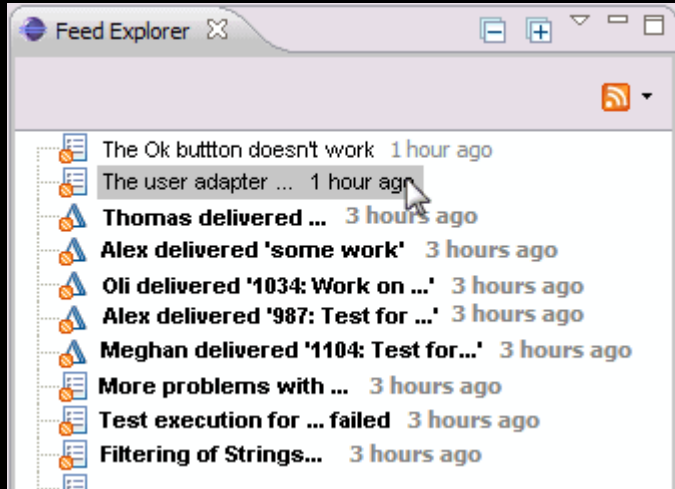

# Information in a Project Environment

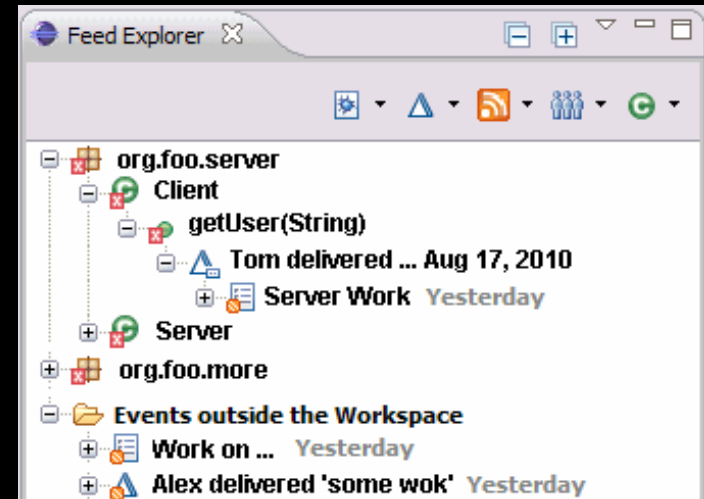

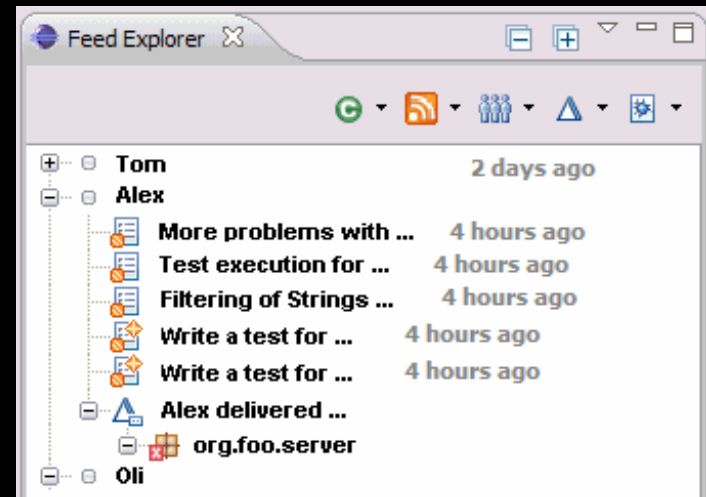

# Context to Ease Relevancy Determination (Second Session)

Context

Team  
Context

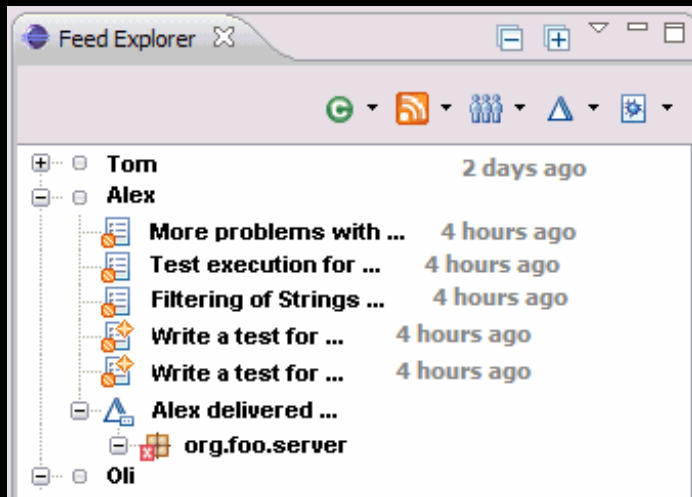

# Context to Ease Relevancy Determination (Second Session)

## Work Context (source code)

- Helpful for 79% of news items in context
- 60% participants conceived it as generally helpful

## Team Context

- 80% participants conceived it as generally helpful

# Summary

Determination of relevancy (and irrelevancy) is individual and situation dependent

Structure of information can be used to provide context and ease determination
