

THE UNIVERSITY OF BRITISH COLUMBIA
Curriculum Vitae for Faculty Members

Date: April 22, 2024

Initials: RH

1. SURNAME: Holmes

FIRST NAME: Reid

MIDDLE NAME: Thomas

2. DEPARTMENT/SCHOOL: Computer Science

3. FACULTY: Science

4. PRESENT RANK: Professor

5. POST-SECONDARY EDUCATION

University or Institution	Degree	Subject Area	Dates
University of Calgary	PhD	Computer Science	09/2004 – 08/2008
University of British Columbia	MSc	Computer Science	09/2002 – 06/2004
University of British Columbia	BSc	Computer Science	09/1997 – 06/2002

6. EMPLOYMENT RECORD

(a) Prior to Coming to UBC

University, Company or Organization	Rank or Title	Dates
University of Waterloo	Associate Professor	07/2015 – 08/2015
University of Waterloo	Assistant Professor	08/2010 – 07/2015
University of Washington	Adjunct Professor	09/2011 – 09/2013
University of Washington	NSERC Postdoctoral Fellow	08/2008 – 08/2010
Microsoft Research	Research Intern	09/2007 – 12/2007
IBM Canada	Visiting Researcher	07/2006 – 08/2006
University of Calgary	Research Assistant	09/2004 – 08/2008
University of British Columbia	Research Assistant	09/2002 – 06/2004
Microsoft	Program Manager	05/2002 – 08/2002
Pivotal Corporation	Software Engineer	04/2001 – 08/2001
University of British Columbia	Undergraduate Researcher	04/2000 – 12/2000
Suncor Energy	Information Technologist	01/1999 – 08/1999
University of British Columbia	Network Engineer	09/1997 – 01/1999

(b) At UBC

Rank	Dates
Professor	07/2022 – present
Associate Professor	09/2015 – 07/2022

(c) Date of granting of tenure at UBC: September 3, 2015.

7. LEAVES OF ABSENCE

Location	Type of Leave	Dates
École Polytechnique Fédérale de Lausanne (EPFL)	Sabbatical	01/2022 – 06/2022
University of British Columbia	Sabbatical	07/2021 – 12/2021

8. TEACHING

(a) Areas of Special Interest and Accomplishments

Experiential learning is at the core of my undergraduate teaching philosophy. To support this, I redeveloped CPSC 310 in 2016 and filmed the entire course in the UBC Studio so it could be used both online via edX and to enrich in person classes. This redesign built the course around a medium-sized programming task completed over the duration of the term, requiring students to write over 2,500 lines of code. Students find this project extremely challenging, but is core to helping students learn what non-trivial software development tasks involve. This course was adapted to support the integration of formative-AI tools in 2023W1, and our experience suggests we will continue to allow these tools going forward.

To enable TAs to spend less time marking and more time interacting with students, and to provide learners with formative assessments of their work, I created the AutoTest platform. AutoTest is a substantial engineering task for which I wrote over 25,000 lines of code and is used by over 1,000 UBC undergraduate students each year.

I strongly believe in the principled improvement of teaching practice; to support this, I often innovate in my classroom teaching and report these findings to the community through competitive peer-reviewed education venues (e.g., [C-20, C-15, C-11, C-10, C-5, C-8]).

(b) Courses Taught

Two of my former graduate students (Katharine Kerr and Nick Bradley) taught CPSC 310 for the first time in 2023W2, fulfilling a key departmental teaching need. I have actively worked with both of

¹CPSC 310: Introduction to Software Engineering (Undergraduate course)

²CPSC 507: Advanced Topics in Software Engineering (Graduate course)

³CPSC 410: Advanced Software Engineering (Undergraduate course)

them during this time to mentor them while they are teaching for the first time, as well as actively managing and improving the course backend for them so they can focus on the core teaching aspects of the course.

Graduate Student Awards Under my Supervision

Nick Bradley:

- Awarded the NSERC PGS-D. 2018
- Awarded the UBC 4YF scholarship. 2018

Quinn Hanam:

- Awarded the UBC 4YF scholarship. 2016

Laura Inozemtseva:

- Microsoft PhD Fellowship, the 2nd Canadian student to win this award (\$64,000). 2015
- Murray Martin Prize for the best research paper in Math at UWaterloo (\$5,000). 2015
- Cheriton Graduate Scholarship at the UWaterloo (\$20,000). 2014
- Ontario Graduate Scholarship (\$15,000). 2014
- President's Graduate Scholarship at UWaterloo (\$10,000). 2014
- Invited to attend the Future of Software Engineering Symposium by the NSF. 2013

9. SCHOLARLY AND PROFESSIONAL ACTIVITIES

(a) Areas of Special Interest and Accomplishments

My research impact has been recognized through multiple avenues. I was awarded the 2018 CS-Can/Info-Can *Outstanding Young Computer Science Researcher Award*, recognizing “excellence in research...in Canadian Computer Science departments”. In 2016 I received a NSERC Discovery Accel-

erator (top top 2% of applicants). I have received five ACM SIGSOFT Distinguished Paper Awards at the top two Software Engineering Conferences, ICSE and FSE (top 3% of submissions). My record significantly contributes to UBC's ranking as one of the top Universities in Canada for Software Engineering³⁸.

I have served as an Associate Editor for the ACM TSE, the most prestigious journal in Software Engineering (2016-2021) and consistently serve on top-tier program committees. My research has been widely funded beyond the standard NSERC Discovery (and Accelerator) grants. This includes an industrial grant with ABB involving a \$375,000 CAD cash contribution, matched by NSERC for a total of \$750,000.

(b) *Awards for Scholarship*

ICSE and FSE represent the two most prestigious and selective publication venues in software engineering. ACM SIGSOFT Distinguished Paper Awards are awarded to less than 10% of accepted papers (which represents less than 3% of submitted work).

- **Nominated for the Journal of Computer Languages Best Paper Award:** “Language Impact on Productivity for Industrial End Users: A Case Study from Programmable Logic Controllers.” *Journal of Computer Languages (COLA)* 2022
- **ACM Distinguished Paper Award:** “CodeShovel: Constructing Method-Level Source Code Histories.” *International Conference on Software Engineering (ICSE)* 2021
- **UBC Open Education Resource Champion** “*Outstanding Research Into Teaching Application-based Software Development.*” 2019
- **Outstanding Young Computer Science Researcher Award** CS—Can | Info—Can 2018
- **ACM Distinguished Paper Award:** “Are Mutants a Valid Substitute for Real Faults in Software Testing?” *Foundations of Software Engineering (FSE)* 2014
- **ACM Distinguished Paper Award:** “Coverage Is Not Strongly Correlated With Test Suite Effectiveness.” *International Conference on Software Engineering (ICSE)* 2014
- **Distinguished Paper Award:** “The Influence of Non-Technical Factors on Code Review.” *Working Conference on Reverse Engineering (WCRE)* 2013

- **ACM Distinguished Paper Award:** “Proactive Detection of Collaboration Conflicts.” *Foundations of Software Engineering (FSE)* 2011
- Nominated for the Governor General’s Gold Medal 2009
- Nominated for the Chancellor’s Graduate Medal 2009

- Departmental Research Award – \$8,000 2004

13. OTHER RELEVANT INFORMATION

This section provides some important context on the venues I choose for publication and aspects of my research approach that influence publication velocity.

Publication venues. The majority of Software Engineering research appears in archival-quality conferences. These conferences usually have acceptance rates $< 25\%$. In Software Engineering, the top two conferences are the International Conference on Software Engineering (ICSE), and the Symposium on the Foundations of Software Engineering (FSE), both of which I have published at and have received distinguished paper awards from. The next tranche of SE conference venues, all rated A by CORE, include OOPSLA/SPLASH, ASE, and ICSME.

COVID-19 has increased interest in journal submissions (both within my group and across the field) as in the absence of international meetings to present work, top journals offer more flexible review schedules with high visibility. Top journals in Software Engineering include the Transactions on Software Engineering (TSE, where I have served as an Associate Editor), the Transactions on Software Engineering and Methodology (TOSEM), and the Empirical Software Engineering Journal (EMSE).

For education-related work, I prefer to publish work at SPLASH-E and ICSE-SEET, as both venues focus on teaching students beyond their first year. Also, their parent venues are software engineering conferences, which tend to attract participants who can more directly apply the approaches I have developed and evaluated in my courses. That said, SIGCSE remains one of the most prominent and influential educational venues, and I have published there as well.

System building and research throughput. My research often involves building systems to operationalize hypothesis testing that is undertaken with real systems and software engineers. This kind of research approach requires much more stringent tool building than an independent analysis performed by graduate students. There are two factors accounting for this: First, real systems are extremely complex and building tools that work broadly is challenging and time-consuming. Second, industrial engineers are experts at working with tools; if an intervention is of low quality it is impossible to tell if the hypothesis was wrong, or if the tool was just poorly built. Real world evaluations are crucial though for understanding both the importance of a problem and the strengths and weaknesses of the hypotheses we are trying to investigate. Unfortunately, building industrial-strength tools and conducting industrial evaluations significantly lengthens the duration of a research project. Examples of these projects include building interventions for industrial engineers work on their own tasks [ICSE 2021], working with a large number of real-world systems [FSE 2017, ICSE 2021], or approaches that were evaluated with industrial engineers who were working on controlled tasks [ICSE 2018, VISSOFT 2020, TSE 2022].

Publication venue. In Software Engineering the impactful work appears in conferences rather than journals. These top venues typically have acceptance rates ranging between 9-25% and provide the greatest opportunity for my students to present their work to the broadest community of international scholars.

Author order. The author order in my field typically follow the order of contribution, with the exception of the last author. The last author is typically the main supervisor of the project.

Student authors. The bolded author names in the publication lists indicate students and postdocs who I either supervised or co-supervised.
