

# RADIAL VISUALIZATION OF MULTIDIMENSIONAL/MULTIVARIATE DATA: A SURVEY

Gabriel Zhou

## RADIAL VISUALIZATION

- Radial visualization describes any interactive system that arranges data in a circular fashion.

## MULTIDIMENSIONAL/MULTIVARIATE

- Key attributes (independent attributes) and value attributes (dependent attributes)
  - Key attributes act as index to look up value attributes
  - Multidimensional – multiple key attributes
  - Multivariate – multiple value attributes
- 
- Attributes, dimensions, and variables are used as synonyms in visualization papers. Multidimensional data are often referred to multivariate data.

# WHY USE RADIAL VISUALIZATION TO PRESENT MULTIDIMENSIONAL/MULTIVARIATE DATA ?

Position on common scale		Effectiveness ↑ Most ↓ Least	
Position on unaligned scale			
Length (1D size)			
Tilt/angle			
Area (2D size)			
Depth (3D position)			
Color luminance			Same
Color saturation			
Curvature			Same
Volume (3D size)			

[Fig 5. I. T. Munzner, Visualization Analysis and Design, Florida: A K Peters/CRC Press, 2014.]

WHY USE RADIAL VISUALIZATION TO PRESENT  
MULTIDIMENSIONAL/MULTIVARIATE DATA ?

- Inherent cyclic

# WHY USE RADIAL VISUALIZATION TO PRESENT MULTIDIMENSIONAL/MULTIVARIATE DATA ?

- Compactness

AXIS BASED

SEGMENT BASED

OTHERS

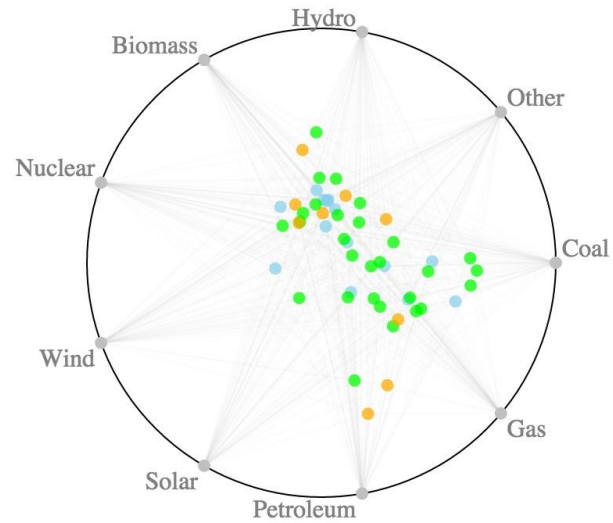

## AXIS BASED

- Compare data
- Discover clusters, patterns, outliers, etc.

## SEGMENT BASED

- Time referenced data
- Periodic property
- Discover trends, patterns, correlations of data over time

Circle Segments

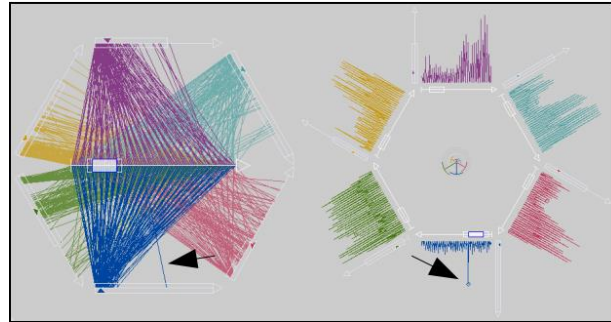

Circle View
