

Lecture 3, InfoVis MiniCourse

Navigation/Zooming, Focus+Context, Graphs/Trees, Scalability, Task-Centered Design

LaBRI, University of Bordeaux
18 June 2004

Tamara Munzner

Mini-Course Outline

- Perception
- Frameworks
- Color
- Space/Order
- Depth/Occlusion
- High Dimensionality
- Interaction
- Navigation/Zooming
- Focus+Context
- Graphs/Trees
- Scalability
- Task-Centered Design

2

Spatial Navigation

real navigation only partially understood

- compared to low-level perception, JNDs
- 3D vs. 2D: we don't fly, we walk!

spatial memory / environmental cognition

- city: landmark/path/whole
- [The Image of the City, Kevin Lynch, MIT Press 1960]

synthetic vs. real displays

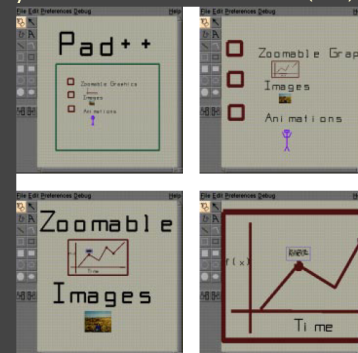

- even perception not always the same!

[Overestimation of heights in virtual reality is influenced more by perceived distal size than by the 2-D versus 3-D dimensionality of the display. Dixon and Proffitt. Perception, 31, 103-112, 2002]

3

Pad++

"infinitely" zoomable user interface (ZUI)

4

Space-Scale Diagrams

reasoning about navigation and trajectories

Figure 1. The basic construction of a Space-Scale diagram from a 2D picture.

[Space-Scale Diagrams: Understanding Multiscale Interfaces
George Furnas and Ben Bederson, Proc SIGCHI '95.
www.cs.umd.edu/hcil/pad++/papers/chi-95-spacescale/chi-95-spacescale.pdf]

5

Viewing Window

[www.cs.umd.edu/hcil/pad++/papers/chi-95-spacescale/chi-95-spacescale.pdf]

6

1D Version

[www.cs.umd.edu/hcil/pad++/papers/chi-95-spacescale/chi-95-spacescale.pdf] 7

Pan-Zoom Trajectories

[www.cs.umd.edu/hcil/pad++/papers/chi-95-spacescale/chi-95-spacescale.pdf]

Joint Pan-Zoom Problem

[www.cs.umd.edu/hcil/pad++/papers/chi-95-spacescale/chi-95-spacescale.pdf]

Shortest Path?

[www.cs.umd.edu/hcil/pad++/papers/chi-95-spacescale/chi-95-spacescale.pdf] 10

Shortest Path

[www.cs.umd.edu/hcil/pad++/papers/chi-95-spacescale/chi-95-spacescale.pdf]

Shortest Path, Details

[www.cs.umd.edu/hcil/pad++/papers/chi-95-spacescale/chi-95-spacescale.pdf]

Speed-Dependent Automatic Zooming

automatic zoom

- amount depends on how far to pan

[demo]

[www-ui.is.s.u-tokyo.ac.jp/~takeo/java/autozoom/autozoom.htm]

[video]

[www-ui.is.s.u-tokyo.ac.jp/~takeo/video/autozoom.mov]

[Speed-Dependent Automatic Zooming for Browsing Large Documents
Takeo Igarashi and Ken Hinckley, Proc. UIST'00, pp. 139-148.
www-ui.is.s.u-tokyo.ac.jp/~takeo/papers/uist2000.pdf]

13

Smooth and Efficient Zooming

uw space: $u = \text{pan}$, $w = \text{zoom}$

- horiz axis: cross-section through objects
- point = camera at height w above object
- path = camera path

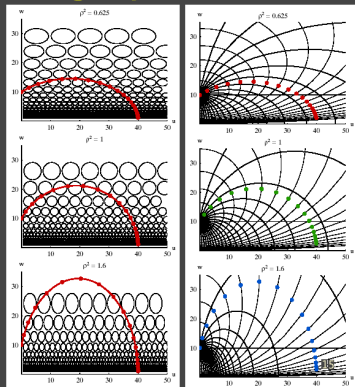

[Smooth and Efficient Zooming and Panning.
Jarke J. van Wijk and Wim AA Nuij, Proc InfoVis 2003.
<http://www.win.tue.nl/~vanwijk/zoompan.pdf>]

14

Optimal Paths Through Space

at each step, cross same number of ellipses

cross minimal number of ellipses total

Multiscale Display

[www.cs.umd.edu/hcil/pad++/papers/chi-95-spacescale/chi-95-spacescale.pdf]

16

What's This?

[www.cs.umd.edu/hcil/pad++/papers/chi-95-spacescale/chi-95-spacescale.pdf]

17

Fisheye Focus+Context View!

leads to next topic...

[www.cs.umd.edu/hcil/pad++/papers/chi-95-spacescale/chi-95-spacescale.pdf]

Mini-Course Outline

- Perception
- Frameworks
- Color
- Space/Order
- Depth/Occlusion
- High Dimensionality
- Interaction
- Navigation/Zooming
- Focus+Context**
- Graphs/Trees
- Scalability
- Task-Centered Design

Intuition

move part of surface closer to eye

stretchable rubber sheet
 borders tacked down

merge overview and detail into combined view

[A Review and Taxonomy of Distortion-Oriented Presentation Techniques.
 Leung and Apperley, www.ai.mit.edu/people/jimmylin/papers/Leung94.pdf]

Bifocal

transformation

magnification

1D

2D

Polyfocal: Continuous Mag

transformation

magnification

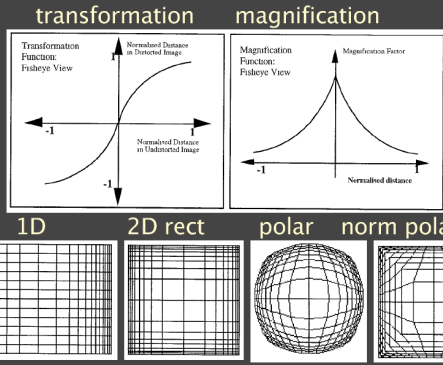

1D

2D

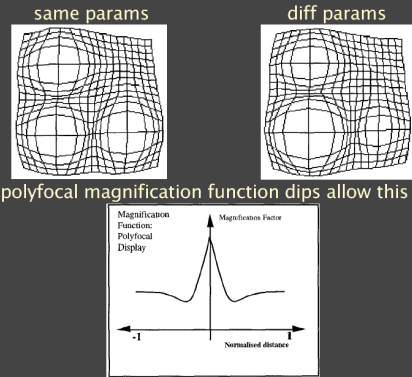

[A Review and Taxonomy of Distortion-Oriented Presentation Techniques]

Fisheye Views: Continuous Mag

[A Review and Taxonomy of Distortion-Oriented Presentation Techniques]

Multiple Foci

26

Nonlinear Magnification Functions

- transformation
 - distortion
- magnification
 - derivative of transformation
- directionality
 - easy: compute transformation given magnification derivative
 - hard: compute magnification given transformation integration
- new mathematical framework
 - approximate integration, iterative refinement
 - minimize "error mesh"

27

[Nonlinear Magnification Fields. Alan Keahey, Proc InfoVis 1997]

Expressiveness

- magnification is more intuitive control
- allow expressiveness, data-driven expansion

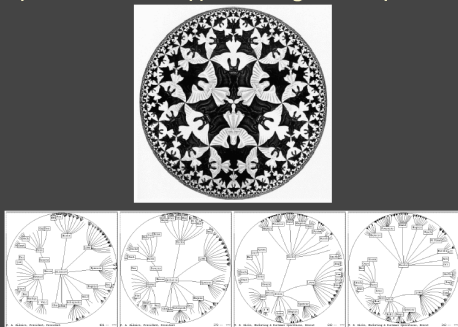

[Nonlinear Magnification Fields. Alan Keahey, Proc InfoVis 1997
<http://ftp.cs.indiana.edu/pub/keahey/papers/Infovis.97.pdf>]

28

2D Hyperbolic Trees

fish-eye effect from hyperbolic geometry

29

[The Hyperbolic Browser: A Focus + Context Technique for Visualizing Large Hierarchies. John

3D Hyperbolic Graphs: H3

3D hyperbolic geometry, tree as backbone

[video]
graphics.stanford.edu/videos/h3

[H3: Laying Out Large Directed Graphs in 3D Hyperbolic Space.
 Tamara Munzner, Proc InfoVis 97. <http://graphics.stanford.edu/papers/h3>]

30

Layout

problem

- general problem is NP-hard

31

Layout

problem

- general problem is NP-hard

solution

- tractable spanning tree backbone
- match mental model "quasi-hierarchical"
- use domain knowledge to construct select parent from incoming links

32

Layout

problem

- general problem is NP-hard

solution

- tractable spanning tree backbone
- match mental model "quasi-hierarchical"
- use domain knowledge to construct select parent from incoming links
- non-tree links on demand

33

Avoiding disorientation

problem

- maintain user orientation when showing detail
- hard for big datasets

exponential in depth: node count, space needed

global overview

local detail

34

Overview and detail

two windows: add linked overview

- cognitive load to correlate

solution

- merge overview, detail
- "focus+context"

35

Progressive rendering

want fast update during user interaction

- fill in details when user is idle

guaranteed frame rate algorithm

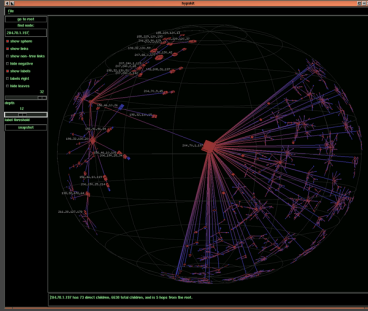

[Drawing Large Graphs with H3Viewer and Site Manager, Tamara Munzner Proc. Graph Drawing 98, <http://graphics.stanford.edu/papers/h3draw>]

36

H3 discussion: scalability

focus+context layout

- cognitive limit: if graph diameter \gg visible area

37

[http://www.caida.org/tools/measurement/skitter/viz/hypview/mrtdhygui_hires.gif]

TreeJuxtaposer

keep root, landmark locations visible

- move from local F+C to global F+C
- rubber sheet with borders tacked down
- guaranteed visibility
- [demo]

[TreeJuxtaposer: Scalable Tree Comparison using Focus+Context with Guaranteed Visibility. Munzner et al. SIGGRAPH 2003. <http://www.cs.ubc.ca/~tmm/papers/tj>]

38

- High Dimensionality
- Interaction
- Navigation/Zooming
- Focus+Context
- Graphs/Trees
- Scalability
- Task-Centered Design

40

Hermann survey

true survey, won't try to summarize here

nice abstraction work by authors

- Strahler skeletonization
- ghosting, hiding, grouping

[Graph Visualisation in Information Visualisation: a Survey. Ian Herman, Guy Melancon, M. Scott Marshall. IEEE Transactions on Visualization and Computer Graphics, 6(1), pp. 24-44, 2000. <http://citeseer.nj.nec.com/herman0graph.html>]

41

Animated Radial Layouts

static radial layouts: known algorithm

[Animated Exploration of Graphs with Radial Layout. Ka-Ping Yee, Danyel Fisher, Rachna Dhamija, and Marti Hearst, Proc. InfoVis 2001. <http://bailando.sims.berkeley.edu/papers/infovis01.htm>]

42

Dynamic Graph Layout

little previous work

- DynaDAG [North, Graph Drawing 95]
- DA-TU [Huang, Graph Drawing 98]

minimize visual changes

stay true to current dataset structure

[video]

43

Animation

polar interpolation

maintain neighbor order

[<http://bailando.sims.berkeley.edu/papers/infvis01.htm>]

44

SpaceTree

focus+context tree

- animated transitions

semantic zooming

[demo]

[SpaceTree <ftp://ftp.cs.umd.edu/pub/hcil/Reports-Abstracts-Bibliography/2002-05html/2002-05.pdf>]

45

Treemaps

containment not connection

difficulties reading

46

Cushion Treemaps

show structure with shading

- scale parameter controls global vs. local

[Cushion Treemaps. Jack J. van Wijk and Huub van de Wetering, Proc InfoVis 1999, pp 73-78. <http://www.win.tue.nl/~swanwijk/ctm.pdf>]

47

Cushion Treemaps

application

- SequoiaView, Windows app
- hard drive usage
- <http://www.win.tue.nl/sequoiaview/>

treemap strength

- showing an attribute

48

Graphs: Matrix vs. Node-Link

large software project, implementation vs. spec
link matrix vs. node network

[Using Multilevel Call Matrices in Large Software Projects. Frank van Ham, Proc. InfoVis 2003, pp.227-232] 49

Matrices

uniform, recursive, stable
subdivide by

total component count visible subcomponent count

[Using Multilevel Call Matrices in Large Software Projects. Frank van Ham, Proc. InfoVis 2003, pp.227-232]

50

Zooming

abstraction levels

linear interpolation plus crossfade
trajectories: will read van Wijk 03 in week 6

[Using Multilevel Call Matrices in Large Software Projects. van Ham]

Additional Encoding

color:
call allowed
by spec

color:
local region
closest red

transparency:
call density

histograms: size distribution

[Using Multilevel Call Matrices in Large Software Projects. Frank van Ham, Proc. InfoVis 2003, pp.227-232]

52

Tasks Successfully Supported

- visual categorization
 - i.e. libraries with mostly incoming calls
- previous summary shown to be incomplete
- spotting unwanted calls
- determining component dependencies

53

Multiscale Small-World Graphs

[Multiscale Visualization of Small World Networks. David Auber, Yves Chircota, Fabien Jourdan, Guy Melancon, Proc. InfoVis 2003.]

High Dimensionality
Interaction
Navigation/Zooming
Focus+Context
Graphs/Trees
Scalability
Task-Centered Design

56

Million Items Viz

scaling up treemaps

· 1600x1200 pixels, million items

item

· atomic object displayed as distinguishable contiguous area using one viz technique

[Interactive Information Visualization of a Million Items
Jean-Daniel Fekete and Catherine Plaisant, Proc InfoVis 2002
<http://www.cs.umd.edu/local-cgi-bin/hcil/rr.pl?number=2002-01>]

57

Rendering Techniques

shading not outline

· visually distinguish items with less pixels

show overlap

· calculate with stencil buffer

transparency, stereo

· only for interactive/transient exploring

[Interactive Information Visualization of a Million Items
Jean-Daniel Fekete and Catherine Plaisant, Proc InfoVis 2002
<http://www.cs.umd.edu/local-cgi-bin/hcil/rr.pl?number=2002-01>]

58

Interaction Techniques

flipping/blinking
dynamic queries

· assign depth
· change Z-buffer with slider
excentric labels

animated transitions

· stabilized layouts
· separate translation, scaling
· switching representations

[no video]

[Interactive Information Visualization of a Million Items
Jean-Daniel Fekete and Catherine Plaisant, Proc InfoVis 2002
<http://www.cs.umd.edu/local-cgi-bin/hcil/rr.pl?number=2002-01>]

59

Incremental Dynamic Queries

dynamic queries: user-controlled slider

60

Data Structures

setup

- data set

selection

- picking particular range slider

querying

- moving the slider

maximum hit set

- state of other sliders
- extreme range of this slider
- precompute bins in the range so slider movement fast

61

Critique

good: complexity analysis

bad: far too little detail to replicate

- nothing on incremental rendering
- insufficient on computation data structures

62

63

Mini-Course Outline

Perception
Frameworks
Color
Space/Order
Depth/Occlusion
High Dimensionality
Interaction
Navigation/Zooming
Focus+Context
Graphs/Trees
Scalability
Task-Centered Design

64

Task Analysis

what is the user's general job?
how might infovis help – specific tasks?

do humans need to keep model of complex data
inside head?

- if small dataset, maybe don't need infovis
- if humans don't need to directly understand,
automate instead of visualize!

working directly with users very helpful

- driving problems keeps you honest
- they know tasks
- you know design possibilities

65

Methodology

iterative refinement

- user is not always right
- initial discussion is start, not end

scenario

- exactly how would tool be used
- detailed examples

mockup

- sketch on paper what interface would look like
- much less work than programming
- can try and discuss several alternatives

cognitive walkthrough

- think about places where users might make mistakes

66

Evaluation

adoption

- is it used?

anecdotal

- did somebody discover something?

formal user studies

- large groups for statistical significance
- show it was XX% faster or YY% fewer errors
- cannot design good experiment without training!
- collaborate with psychologist, HCI

informal usability evaluations

- generally much faster

justify design given conceptual framework

- visual encoding given task and data

67
