# Outline

information visualization motivation

designing for humans

information visualization techniques

future directions

# Information visualization

interactive visual representation of abstract data

- help human perform some task more effectively

# Interactivity

## static images

- 10,000 years
- art, graphic design

## moving images

- 100 years
- cinematography

## interactive graphics

- 20 years
- computer graphics, human-computer interaction

# Information visualization

interactive visual representation of abstract data

- help human perform some task more effectively

external representation

- reduces load on working memory

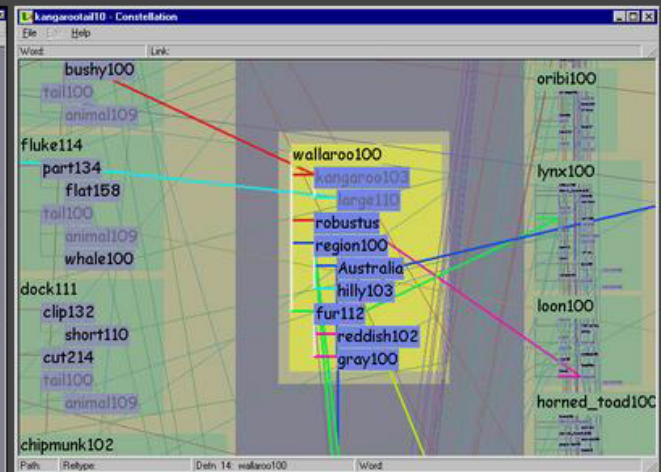

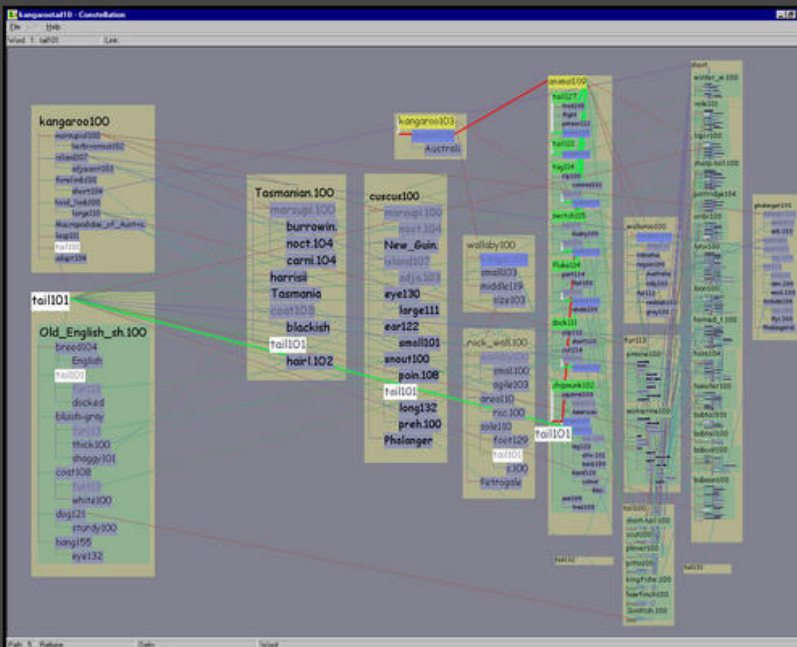

bridging many fields

- graphics: interacting in realtime
- cognitive psych: finding appropriate representation
- HCI: using task to guide design and evaluation

# Task-oriented design

custom design for checking semantic networks

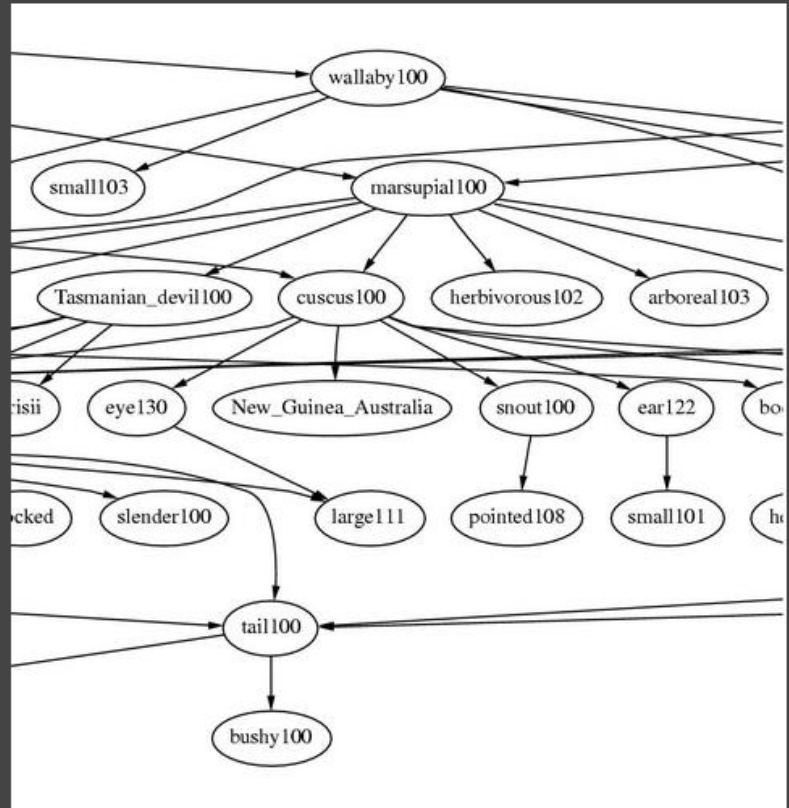

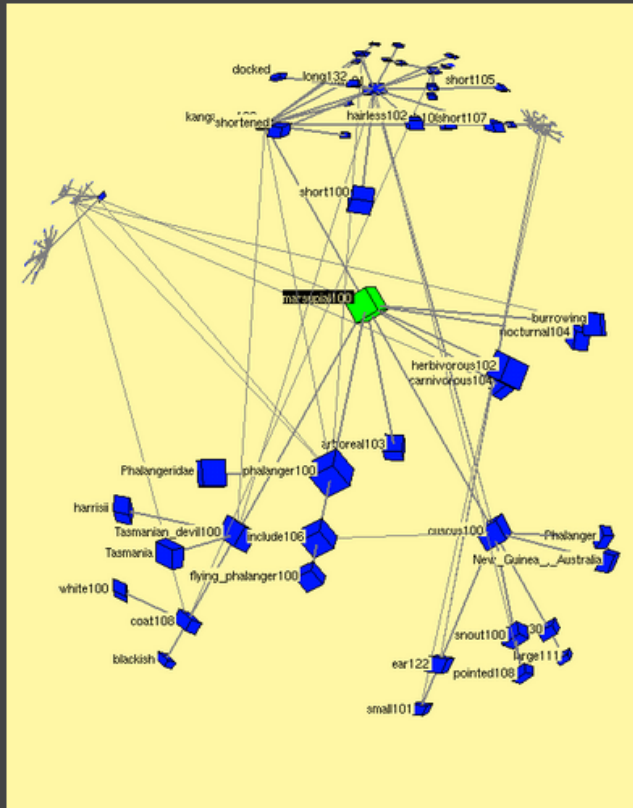

- reading definition subgraph labels

[[graphics.stanford.edu/papers/munzner\\_thesis/html/node10.html#layoutefffig](http://graphics.stanford.edu/papers/munzner_thesis/html/node10.html#layoutefffig)]

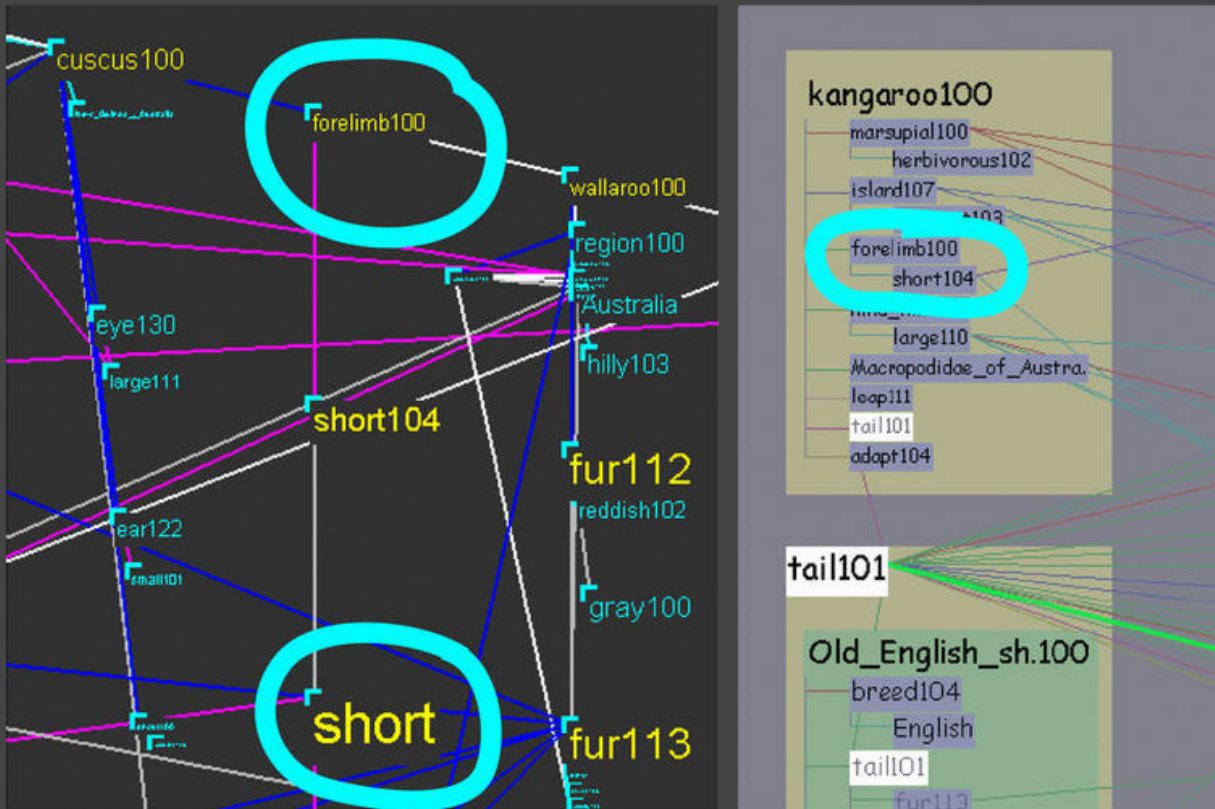

# Task-oriented design

previous general methods

# Design tradeoffs

information density vs. visual salience

[graphics.stanford.edu/papers/munzner\_thesis/html/node11.html#noncanonfig]

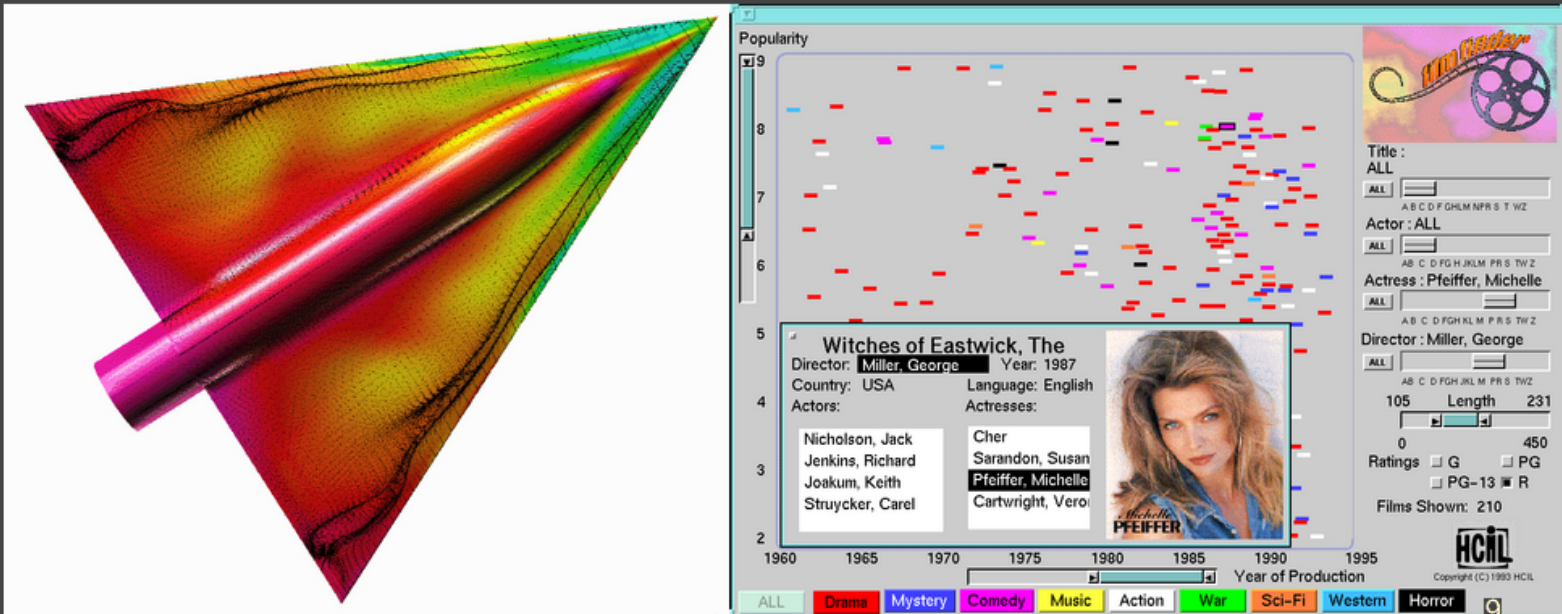

# Scientific vs. information visualization

scivis: inherently spatial data

- fluid flow over airplane wing

infovis: abstract data, choice of spatialization

- FilmFinder

# Example: node-link graphs

powerful abstraction

common in many domains

[Cox and Patterson 92]

[[www.dinoheart.org/images/cladogram.gif](http://www.dinoheart.org/images/cladogram.gif)]

# Why visualize graphs?

Example: book topic relationships

· [Godel, Escher, Bach. Hofstadter 1979]

**Paradoxes** – Lewis Carroll

Turing – Halting problem

Halting problem – Infinity

**Paradoxes** – Infinity

Infinity – Lewis Carroll

Infinity – Unpredictably long searches

Infinity – Recursion

Infinity – Zeno

Infinity – **Paradoxes**

Lewis Carroll – Zeno

Lewis Carroll – Wordplay

Halting problem – Decision procedures

BlooP and FlooP – AI

Halting problem – Unpredictably long searches

BlooP and FlooP – Unpredictably long searches

BlooP and FlooP – Recursion

Tarski – Truth vs. provability

Tarski – Epimenides

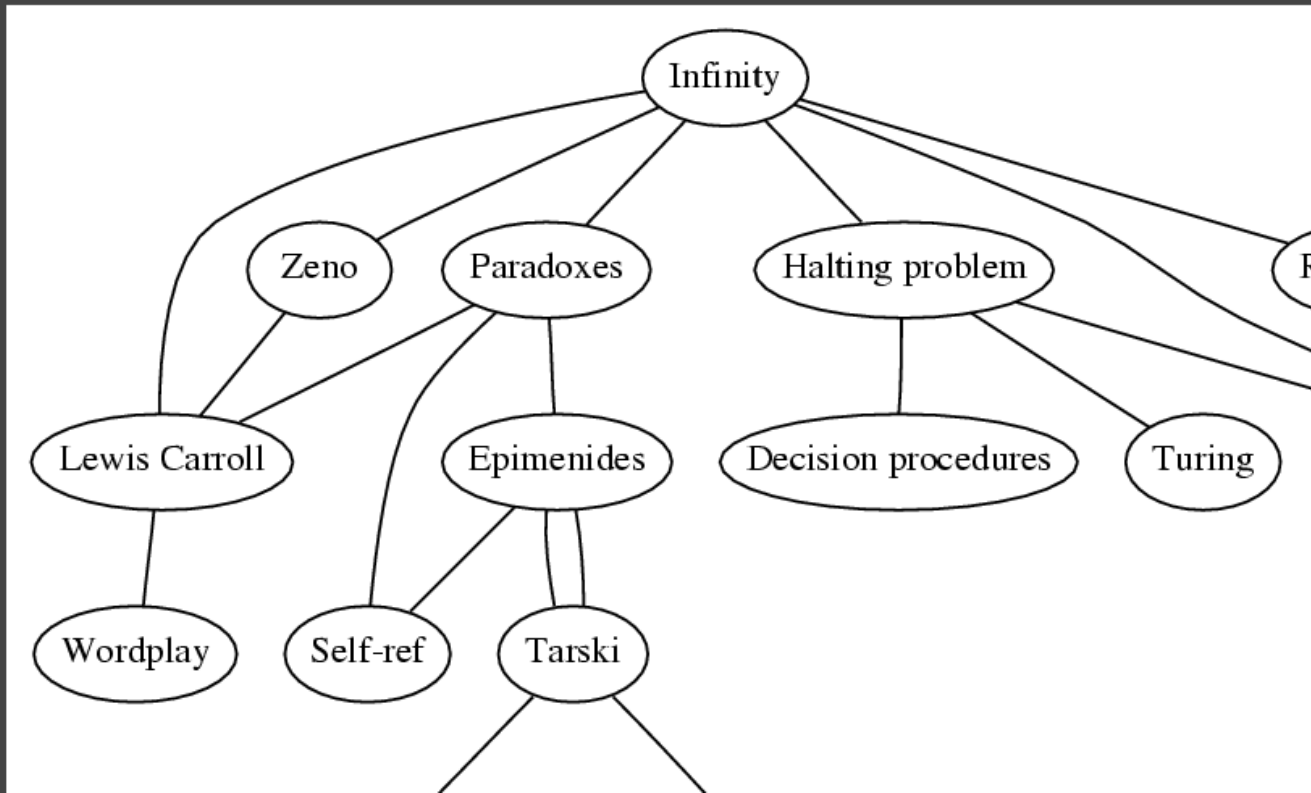

Tarski – Undecidability

Paradoxes – Self-ref

[...]

# Why visualize graphs?

offload cognition to visual systems  
minimal attention to read answer

# Why draw graphs automatically?

manual: hours, days

automatic: seconds

[Gödel, Escher, Bach. Hofstadter 79]

dot, [Gansner et al 93]

# Outline

information visualization motivation

designing for humans

information visualization techniques

future directions

# Human perception

sensors/transducers

- psychophysics: determine characteristics

relative judgements: strong

absolute judgements: weak

different optimizations than most machines

- eyes are not cameras
- perceptual dimensions not nD array
- (brains are not hard disks)

# Preattentive visual dimensions

color (hue) alone: preattentive

- attentional system not invoked
- search speed independent of distractor count

[Chris Healey, Preattentive Processing, [www.csc.ncsu.edu/faculty/healey/PP/PP.html](http://www.csc.ncsu.edu/faculty/healey/PP/PP.html)]

# Preattentive visual dimensions

many preattentive dimensions of visual modality

- hue
- shape
- texture
- length
- width
- size
- orientation
- curvature
- intersection
- intensity
- flicker
- direction of motion
- stereoscopic depth
- lighting direction

# Preattentive visual dimensions

color alone: preattentive

shape alone: preattentive

combined hue and shape: multimodal

- requires attention
- search speed linear with distractor count

# Dimensional ranking

# Data types

continuous (quantitative)

- 10 inches, 17 inches, 23 inches

ordered (ordinal)

- small, medium, large

categorical (nominal)

- apples, oranges, bananas

[[graphics.stanford.edu/papers/polaris](http://graphics.stanford.edu/papers/polaris)]

# Dimensional ranking varies by data type

spatial position best for all types

[Mackinlay, Automating the Design of Graphical Presentations of Relational Information, ACM TOG 5:2, 1986]

# Nonlinear perception of magnitudes

sensory dimensions **not** equally discriminable

- Stevens power law

[Stevens, On the Theory of Scales of Measurement, Science 103:2684, 1946]

# Dimensional dynamic range

linewidth: limited discriminability

# Integral vs. separable dimensions

red-green  
yellow-blue

x-size  
y-size

size  
orientation

color  
shape

color  
motion

color  
location

# Color/Brightness Constancy

segmentation: relative judgements

[courtesy of John McCann, from Stone 2001 SIGGRAPH course

- org
- net
- other

The graph of the Internet was created by parsing the whois and netname information contained in a directory file listing 137,000 domains listed in the public domain register of the Internet for .mil and other administrative routing purposes. The data were collected in January 1, 2002.

Published by  
QUMETA  
www.qumeta.com

Colors from the 22 top-level Internet domains whose national websites exist are assigned. 20 countries are included. (See graph of country website map also a color which is listed in this map and in Researchgate's map website.)

# Coloring Categorical Data

discrete small patches separated in space

limited distinguishability: around 8–14

- channel dynamic range: low

maximally discriminable colors from Ware

- maximal saturation for small areas

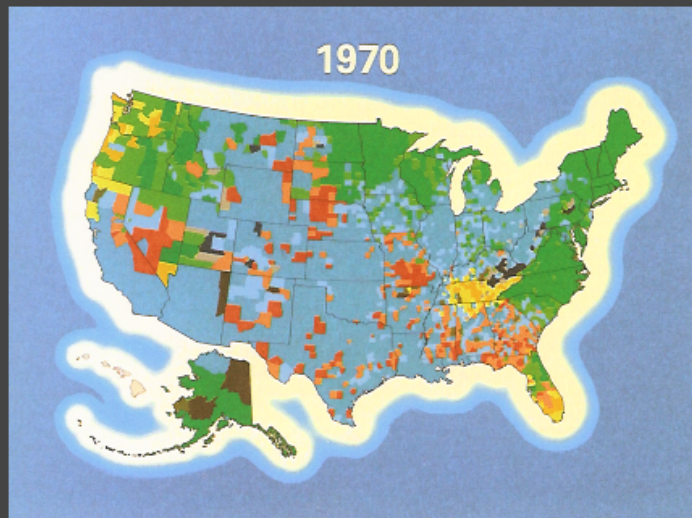

[Colin Ware, Information Visualization: Perception for Design.  
Morgan Kaufmann 1999. Figure 4.21]

choose bins explicitly for maximum mileage

# Minimal Saturation for Large Areas

avoid saturated color in large areas

- "excessively exuberant"

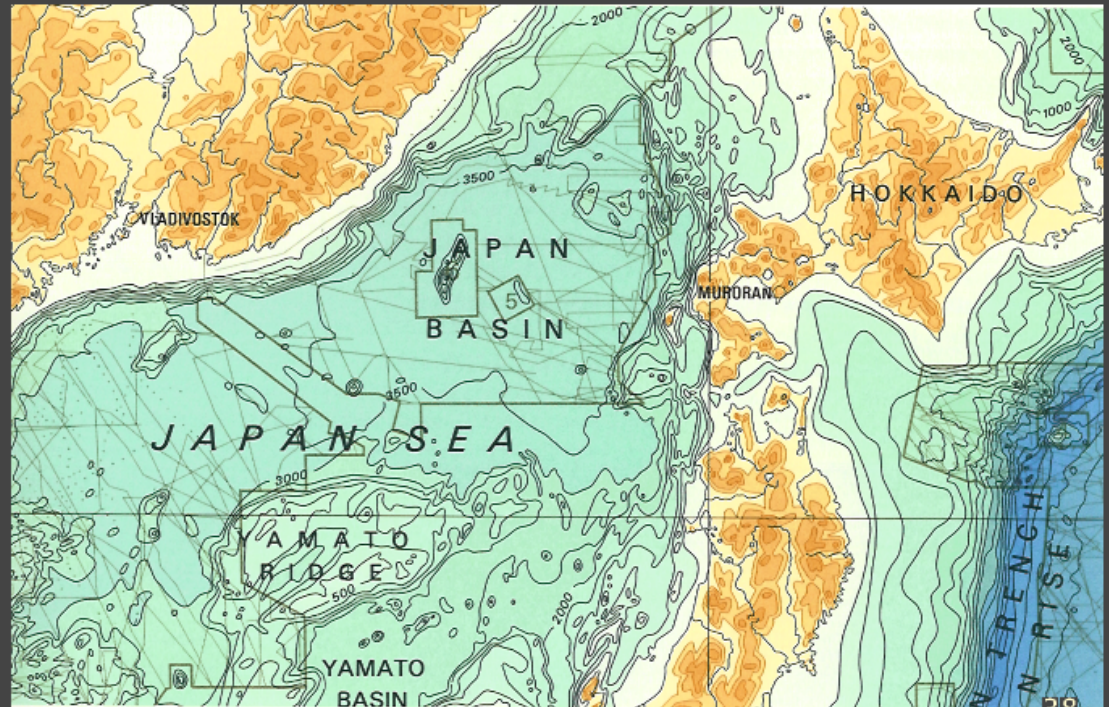

[Edward Tufte, Envisioning Information, p.82]

# Minimal Saturation for Large Areas

large continuous areas in pastel

- diverging colormap (bathymetric/hypsometric)

# Coloring Ordered Data

innate visual order

- greyscale/luminance
- saturation
- brightness

unclear visual order

- hue

# Coloring Quantitative Data

continuous field

side by side patches highly distinguishable

- channel dynamic range: high

mediocre

- hue (rainbow)

good

- greyscale/luminance
- saturation
- brightness

[[www.research.ibm.com/visualanalysis/perception.html](http://www.research.ibm.com/visualanalysis/perception.html)]

# Rainbow Colormap Advantages

low-frequency segmentation

- "the red part", "the orange part", "the green part"

[Rogowitz and Treinish, Why Should Engineers and Scientists Be Worried About Color? <sup>41</sup>  
<http://www.research.ibm.com/people/l/lloyd/color/color.HTM>

# Rainbow Colormap Disadvantages

segmentation artifacts

- popular interpolation perceptually nonlinear!

solution

- create perceptually isolinear map

[Kindlmann, Reinhard, and Creem.

Face-based Luminance Matching for Perceptual Colormap Generation. Proc. Vis 02  
[www.cs.utah.edu/~gk/lumFace](http://www.cs.utah.edu/~gk/lumFace)]

# Non-Rainbow Colormap Advantages

high-frequency continuity

- interpolating between just two hues

[Rogowitz and Treinish, How NOT to Lie with Visualization,

# Segmenting Colormaps

explicit rather than implicit segmentation

[Rogowitz and Treinish, How NOT to Lie with Visualization, [www.research.ibm.com/dx/proceedings/pravda/truevis.htm](http://www.research.ibm.com/dx/proceedings/pravda/truevis.htm)]

# Color Deficiency

very low channel dynamic range for some!

protanope

deutanope

- has red/green deficit
- 10% of males!

tritanope

- has yellow/blue deficit

<http://www.vischeck.com/vischeck>

- test your images

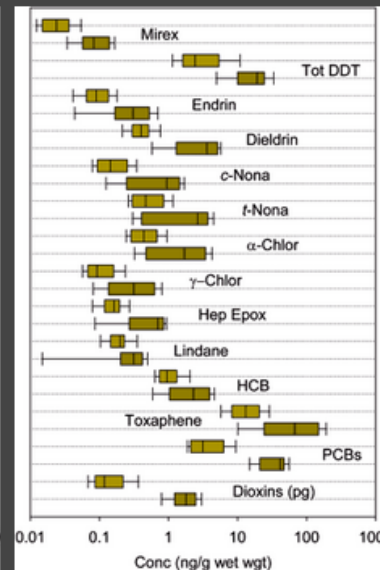

# Color Deficiency Examples: vischeck

original

protanope

deuteranope

tritanope

[[www.cs.ubc.ca/~tmm/courses/cpsc533c-04-spr/a1/dmitry/533a1.html](http://www.cs.ubc.ca/~tmm/courses/cpsc533c-04-spr/a1/dmitry/533a1.html),  
citing Global Assessment of Organic Contaminants in Farmed Salmon,  
Ronald A. Hites, Jeffery A. Foran, David O. Carpenter, M. Coreen  
Hamilton, Barbara A. Knuth, and Steven J. Schwager, 2004 303: 226-229.]

# Designing Around Deficiencies

red/green could have domain meaning  
then distinguish by more than hue alone

- redundantly encode with saturation, brightness

original

protanope

deuteranope

tritanope

# Overview+detail

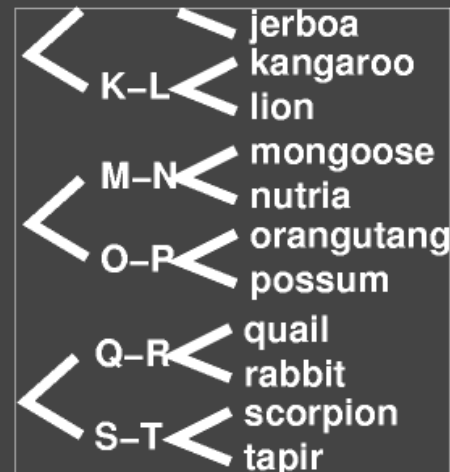

## problem

- avoid user disorientation when inspecting detail
- hard for big datasets

bad: one window, must remember position

global overview

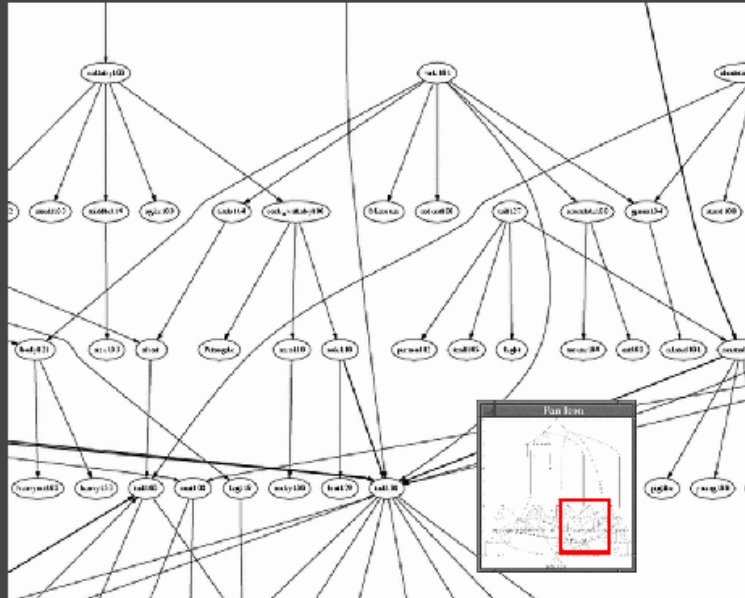

local detail

# Overview and detail

better: add linked overview window(s)

how to create overview?

# Overview and detail

SeeSoft: software maintenance

- (colormaps: segmented vs. continuous)

code age

platform dependencies

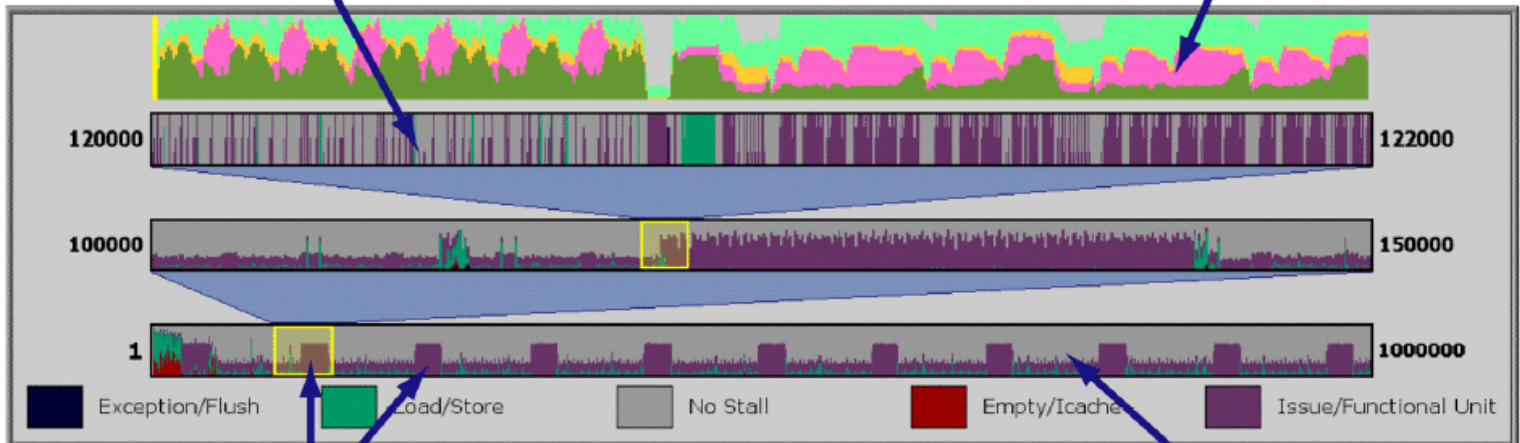

# Overview+detail

## Rivet: performance tuning

- level of detail

③ We are able to focus the area of interest to 2000 cycles – few enough cycles that we can use animation for further investigation.

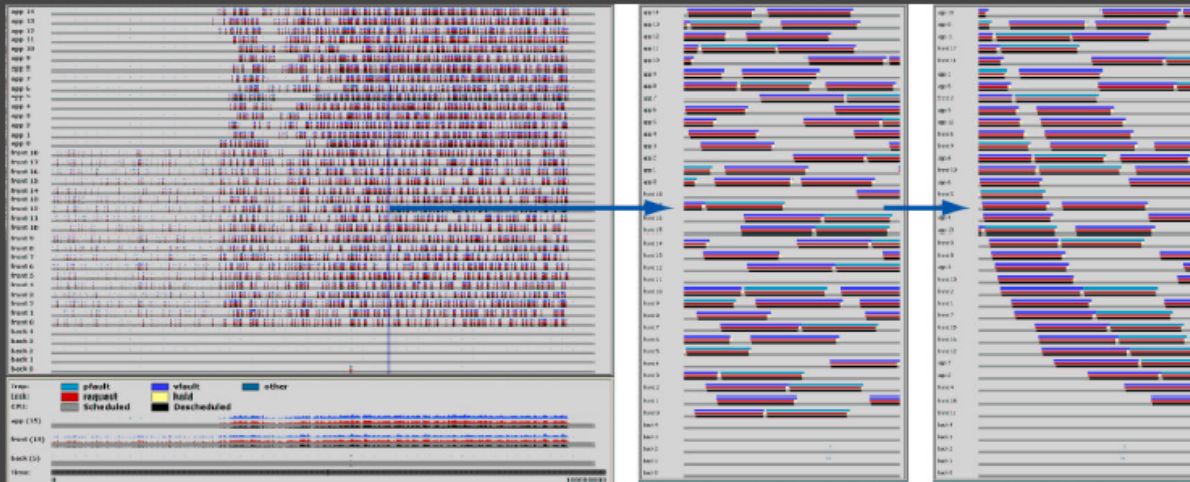

④ The instruction mix chart lets us see what types of instructions are in the pipeline during the time interval of interest.

② There are periods of increased pipeline stall throughout the execution

① The overview displays stall and throughput information for the entire execution.

# Overview to detail to sorting

[Bosch, Performance Analysis and Visualization of Parallel Systems Using SimOS and Rivet: A Case Study, HPCA6, 2000. [graphics.stanford.edu/papers/rivet\\_argus](http://graphics.stanford.edu/papers/rivet_argus)]

# Focus+context

linked windows

- still have cognitive load to correlate

good solution:

- merge overview, detail into single window

fisheye views [Furnas 86], [Sarkar et al 94]

# Focus+context

linked windows

- still have cognitive load to correlate

good solution:

- merge overview, detail into single window

fisheye views [Furnas 86], [Sarkar et al 94]

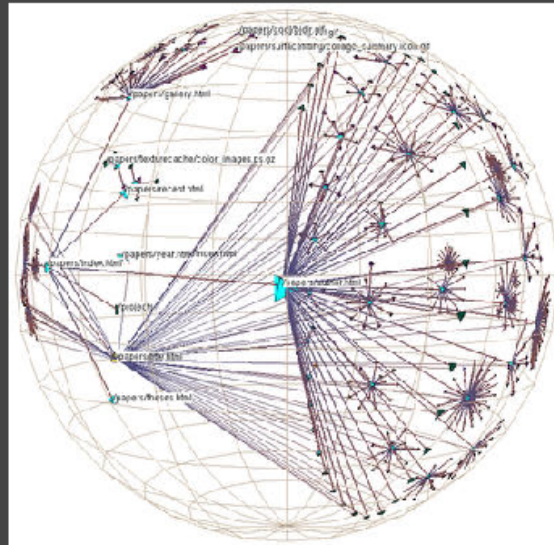

nonlinear magnification [Keahey 96]

# Focus+context

## H3 [Munzner 97]

- task: browsing large quasi-hierarchical graphs
- [demo]

[Munzner 1997, 1998a, 1998b]

# Global focus+context

## TreeJuxtaposer: comparing trees

- linked highlighting
- [demo]

# Space vs. Time: Showing Change

animation: show time using temporal change

- good: show process

[[www.geom.uiuc.edu/docs/outreach/oi/evert.mpg](http://www.geom.uiuc.edu/docs/outreach/oi/evert.mpg)]

# Space vs. Time: Showing Change

animation: show time using temporal change

- good: show process
- good: compare by flipping between two things

[[www.geom.uiuc.edu/docs/outreach/oi/evert.mpg](http://www.geom.uiuc.edu/docs/outreach/oi/evert.mpg)] [[www.astroshow.com/ccdpho/pluto.gif](http://www.astroshow.com/ccdpho/pluto.gif)]

# Space vs. Time: Showing Change

animation: show time using temporal change

- good: show process
- good: compare by flipping between two things
- bad: compare between many things

[[www.geom.uiuc.edu/docs/outreach/oi/evert.mpg](http://www.geom.uiuc.edu/docs/outreach/oi/evert.mpg)] [[www.astroshow.com/ccdpho/pluto.gif](http://www.astroshow.com/ccdpho/pluto.gif)]

# Space vs. Time: Showing Change

animation: show time using temporal change

- good: show process
  - good: compare by flipping between two things
  - bad: compare between many things
- interference from intermediate frames

[[www.geom.uiuc.edu/docs/outreach/oi/evert.mpg](http://www.geom.uiuc.edu/docs/outreach/oi/evert.mpg)] [[www.astroshow.com/ccdpho/pluto.gif](http://www.astroshow.com/ccdpho/pluto.gif)]

# Space vs. Time: Showing Change

small multiples: show time using space

- overview: show each time step in array
- compare: side-by-side easier than temporal  
external cognition instead of internal memory
- general technique, not just for temporal changes

# Minimizing occlusion

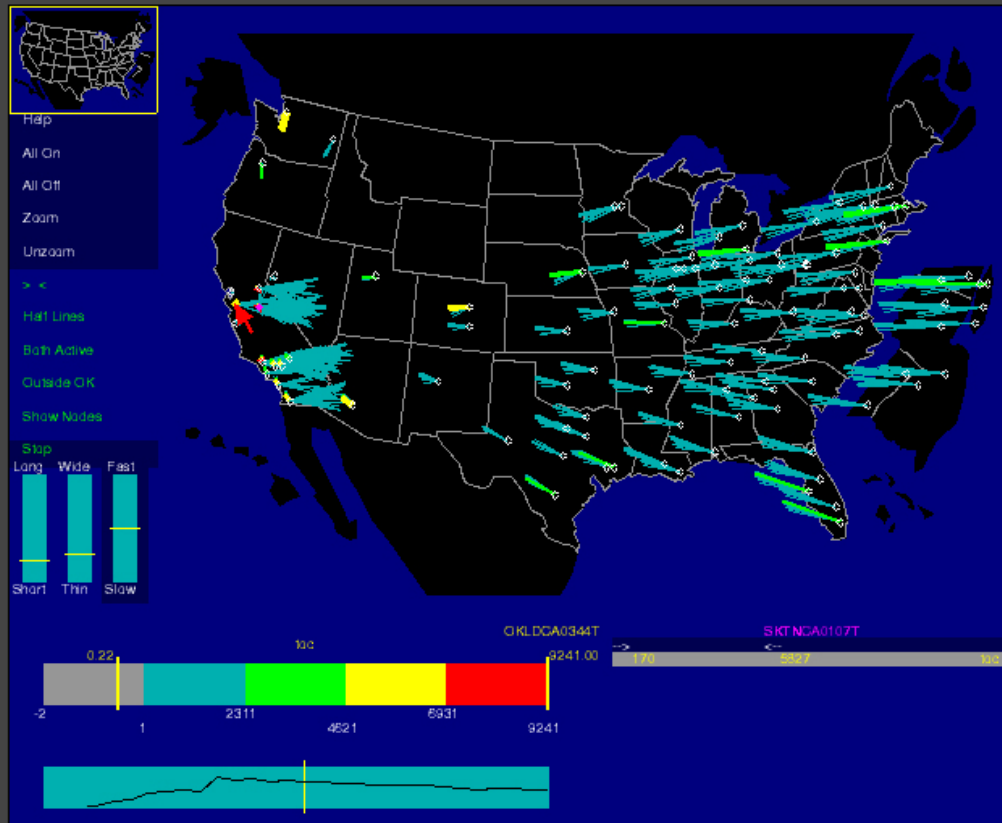

bad: Midwestern occlusion

[[citeseer.nj.nec.com/becker95visualizing.html](http://citeseer.nj.nec.com/becker95visualizing.html)]  
[Becker, Eick, and Wilks. Visualizing Network Data, IEEE TVCG 1995]

# Minimizing occlusion

good: show only start and end of lines

# Minimizing occlusion: 3D vs. 2D

bad: 3D pretty but not useful

- metacognitive gap: lose by adding dimension

# Minimizing occlusion: 3D vs. 2D

good: 2D display of category clusters

[van Wijk and van Selow, Cluster and Calendar based Visualization of Time Series Data, InfoVis99, [citeseer.nj.nec.com/vanwijk99cluster.html](http://citeseer.nj.nec.com/vanwijk99cluster.html)]

# Motion: clarify structure

## navigation

- rotate/translate/zoom

## object recognition

- moving lights at joints  
Johansson 1973

[[www.psy.vanderbilt.edu/faculty/blake/biowalker.gif](http://www.psy.vanderbilt.edu/faculty/blake/biowalker.gif)]

## animated transitions

- avoid change blindness
  - jump increases cognitive load
- smooth transition from one state to next
  - maintain object constancy

# Outline

information visualization motivation

designing for humans

information visualization techniques

future directions

# Future: scaling to huge datasets

## data explosion

- sensors
  - Human Genome Project
  - Sloan Digital Sky Survey
- simulation
  - Accelerated Strategic Computing Initiative
  - microprocessor design
- logging
  - long-distance telephony backbone
  - Web traffic

# Future: dynamic data

static

- hyperlink structure of entire Web

dynamic

- entire Web changing through time (Internet Archive)

open problem: incremental/online layout

- minimal visual changes: maintain user's mental model
- faithfully represent current state

# Future: scaling display resolution

always pixel-bound in past

high-res displays now available

- 4K x 2K: 9Mpixels vs 1 Mpixel
- pixel rich

interactivity + resolution of paper

- add physical navigation (walk closer) to virtual navigation

# Project domains

## current

- bioinformatics
- data mining
- environmental sustainability

## past

- topology
- networking
- computational linguistics
- web site design
