[@tamaramunzner](#)

Outline

- **Session 1** 9:00-10:30am
 - Analysis: What, Why, How
 - Marks and Channels
 - Arrange Tables
 - Arrange Spatial Data
 - Arrange Networks and Trees
- **Session 2** 10:50am-12:20pm
 - Map Color and Other Channels
 - Manipulate: Change, Select, Navigate
 - Facet: Juxtapose, Partition, Superimpose
 - Reduce: Filter, Aggregate
 - Embed: Focus+Context

Defining visualization (vis)

Computer-based visualization systems provide visual representations of datasets designed to help people carry out tasks more effectively.

Why?...

Why have a human in the loop?

Computer-based visualization systems provide visual representations of datasets designed to help people carry out tasks more effectively.

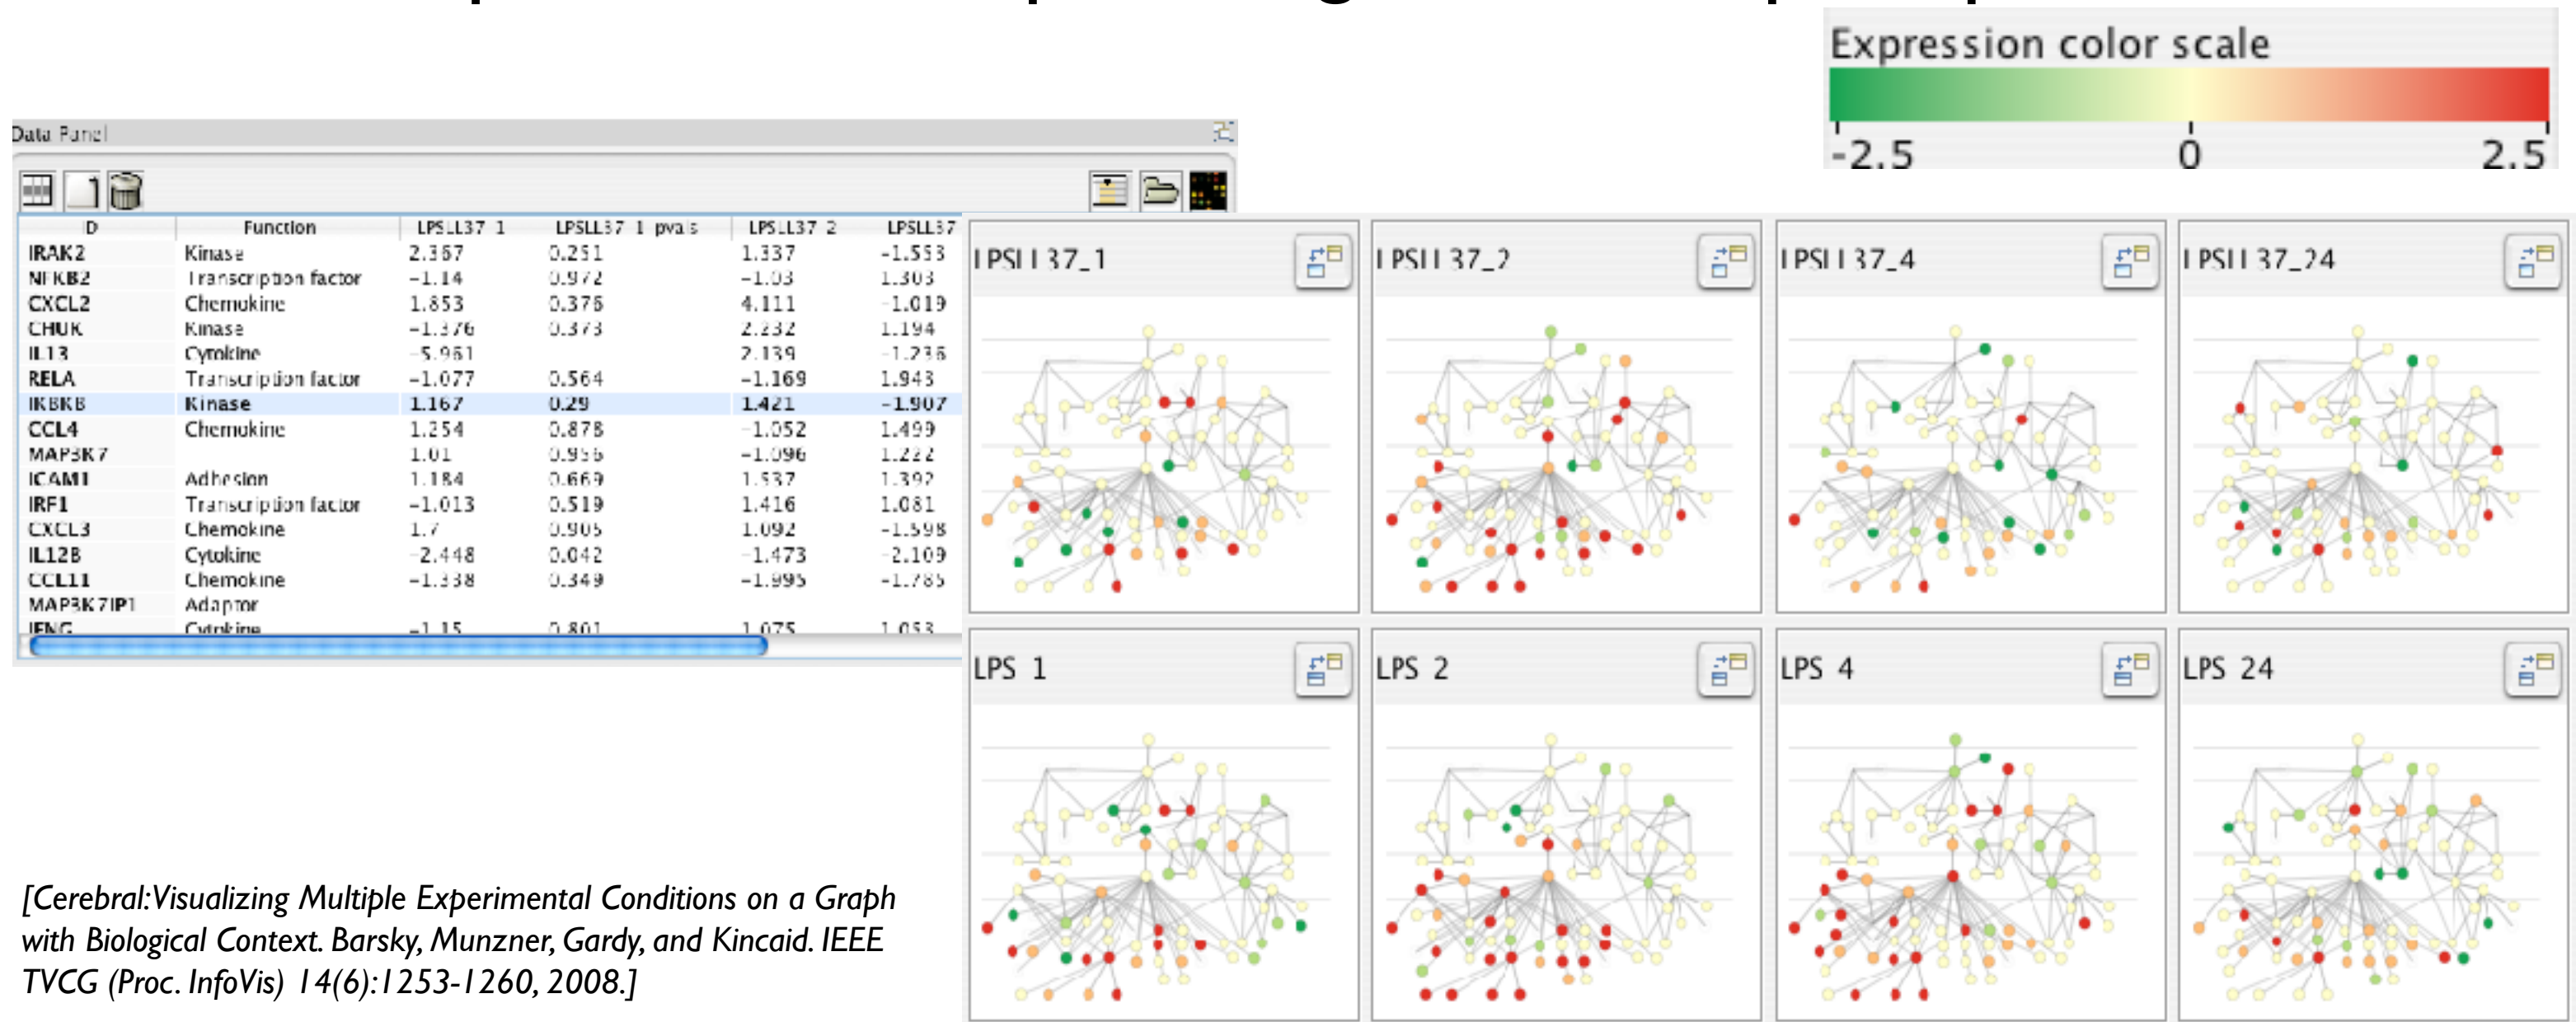

Visualization is suitable when there is a need to augment human capabilities rather than replace people with computational decision-making methods.

- don't need vis when fully automatic solution exists and is trusted
- many analysis problems ill-specified
 - don't know exactly what questions to ask in advance
- possibilities
 - long-term use for end users (ex: exploratory analysis of scientific data)
 - presentation of known results (ex: New York Times Upshot)
 - stepping stone to better understanding of requirements before developing models
 - help developers of automatic solution refine/debug, determine parameters
 - help end users of automatic solutions verify, build trust

Why use an external representation?

Computer-based visualization systems provide **visual representations** of datasets designed to help people carry out tasks more effectively.

- external representation: replace cognition with perception

[Cerebral: Visualizing Multiple Experimental Conditions on a Graph with Biological Context. Barsky, Munzner, Gardy, and Kincaid. IEEE TVCG (Proc. InfoVis) 14(6):1253-1260, 2008.]

Why represent all the data?

Computer-based visualization systems provide visual representations of datasets designed to help people carry out tasks more effectively.

- summaries lose information, details matter
 - confirm expected and find unexpected patterns
 - assess validity of statistical model

Anscombe's Quartet

Identical statistics

x mean	9
x variance	10
y mean	7.5
y variance	3.75
x/y correlation	0.816

Why analyze?

- imposes structure on huge design space
 - scaffold to help you think systematically about choices
 - analyzing existing as stepping stone to designing new
 - most possibilities ineffective for particular task/data combination

SpaceTree

[SpaceTree: Supporting Exploration in Large Node Link Tree, Design Evolution and Empirical Evaluation. Grosjean, Plaisant, and Bederson. Proc. InfoVis 2002, p 57–64.]

TreeJuxtaposer

[TreeJuxtaposer: Scalable Tree Comparison Using Focus+Context With Guaranteed Visibility. ACM Trans. on Graphics (Proc. SIGGRAPH) 22:453– 462, 2003.]

What?

Why?

How?

→ Tree

→ Actions

→ Present → Locate → Identify

→ Targets

→ Path between two nodes

→ SpaceTree

→ Encode → Navigate → Select → Filter → Aggregate

→ TreeJuxtaposer

→ Encode → Navigate → Select → Arrange

What?

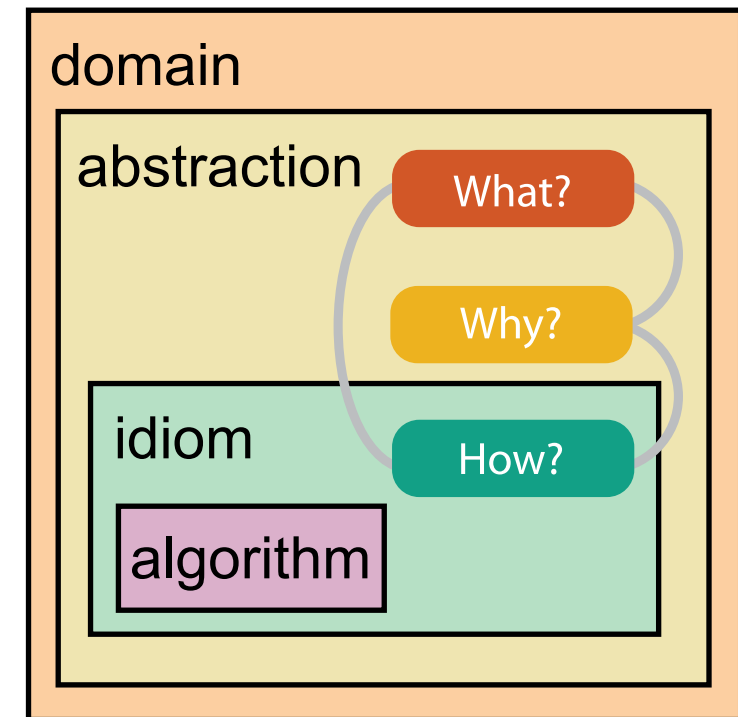

Why?

How?

Analysis framework: Four levels, three questions

- *domain situation*
 - who are the target users?
- *abstraction*
 - translate from specifics of domain to vocabulary of vis
 - **what** is shown? **data** abstraction
 - **why** is the user looking at it? **task** abstraction
- *idiom*
 - **how** is it shown?
 - **visual encoding** idiom: how to draw
 - **interaction** idiom: how to manipulate
- *algorithm*
 - efficient computation

[A Nested Model of Visualization Design and Validation.
Munzner. *IEEE TVCG* 15(6):921-928, 2009
(Proc. InfoVis 2009).]

[A Multi-Level Typology of Abstract Visualization Tasks
Brehmer and Munzner. *IEEE TVCG* 19(12):2376-2385,
2013 (Proc. InfoVis 2013).]

Why is validation difficult?

- different ways to get it wrong at each level

 **Domain situation**
You misunderstood their needs

 **Data/task abstraction**
You're showing them the wrong thing

 **Visual encoding/interaction idiom**
The way you show it doesn't work

 **Algorithm**
Your code is too slow

Why is validation difficult?

- solution: use methods from different fields at each level

Design Study Methodology: Reflections from the Trenches and the Stacks

- definitions
- 9-stage framework
- 32 pitfalls
and how to avoid them

PF-1	premature advance: jumping forward over stages	general
PF-2	premature start: insufficient knowledge of vis literature	learn
PF-3	premature commitment: collaboration with wrong people	winnow
PF-4	no real data available (yet)	winnow
PF-5	insufficient time available from potential collaborators	winnow
PF-6	no need for visualization: problem can be automated	winnow
PF-7	researcher expertise does not match domain problem	winnow
PF-8	no need for research: engineering vs. research project	winnow
PF-9	no need for change: existing tools are good enough	winnow

[Sedlmair, Meyer, Munzner.
*IEEE Trans. Visualization and
Computer Graphics*
18(12): 2431-2440, 2012
(Proc. InfoVis 2012).]

What?

Datasets

Attributes

→ Data Types

- Items
- Attributes
- Links
- Positions
- Grids

→ Data and Dataset Types

Tables	Networks & Trees	Fields	Geometry	Clusters, Sets, Lists
Items	Items (nodes)	Grids	Items	Items
Attributes	Links	Positions	Positions	
	Attributes	Attributes		

→ Attribute Types

- Categorical

- Ordered

- Ordinal

- Quantitative

→ Dataset Types

- Tables

- Networks

- Fields (Continuous)

- Multidimensional Table

- Trees

→ Ordering Direction

- Sequential

- Diverging

- Cyclic

- Geometry (Spatial)

→ Dataset Availability

- Static

- Dynamic

Three major datatypes

→ Dataset Types

- visualization vs computer graphics
 - geometry is design decision

Attribute types

➔ Attribute Types

➔ Categorical

➔ Ordered

➔ *Ordinal*

➔ *Quantitative*

➔ Ordering Direction

➔ Sequential

➔ Diverging

➔ Cyclic

👉 Actions

🎯 Targets

➔ **Analyze**

- ➔ Consume
 - ➔ Discover
 - ➔ Present
 - ➔ Enjoy
- ➔ Produce
 - ➔ Annotate
 - ➔ Record
 - ➔ Derive

➔ **Search**

	Target known	Target unknown
Location known	<i>Lookup</i>	<i>Browse</i>
Location unknown	<i>Locate</i>	<i>Explore</i>

➔ **Query**

- ➔ Identify
- ➔ Compare
- ➔ Summarize

➔ **All Data**

- ➔ Trends
- ➔ Outliers
- ➔ Features

➔ **Attributes**

- ➔ One
 - ➔ Distribution
 - ➔ Extremes
- ➔ Many
 - ➔ Dependency
 - ➔ Correlation
 - ➔ Similarity

➔ **Network Data**

- ➔ Topology
- ➔ Paths

➔ **Spatial Data**

- ➔ Shape

- {action, target} pairs
 - discover distribution
 - compare trends
 - locate outliers
 - browse topology

Actions: Analyze, Query

- analyze

- consume

- discover vs present

- aka explore vs explain

- enjoy

- aka casual, social

- produce

- annotate, record, derive

- query

- how much data matters?

- one, some, all

- independent choices

- analyze, query, (search)

→ Analyze

- Consume

- Discover

- Present

- Enjoy

- Produce

- Annotate

- Record

- Derive

→ Query

- Identify

- Compare

- Summarize

Derive

- don't necessarily just draw what you're given!
 - decide what the right thing to show is
 - create it with a series of transformations from the original dataset
 - draw that
- one of the four major strategies for handling complexity

Original Data

$$\text{trade balance} = \text{exports} - \text{imports}$$

Derived Data

Analysis example: Derive one attribute

- Strahler number
 - centrality metric for trees/networks
 - derived quantitative attribute
 - draw top 5K of 500K for good skeleton

[Using Strahler numbers for real time visual exploration of huge graphs. Auber. Proc. Intl. Conf. Computer Vision and Graphics, pp. 56–69, 2002.]

Task 1

In
Tree

Visual encoding

- analyze idiom structure

Definitions: Marks and channels

- marks

 - geometric primitives

→ Points

→ Lines

→ Areas

- channels

 - control appearance of marks

→ Position

→ Horizontal

→ Vertical

→ Both

→ Color

- channel properties differ

 - type & amount of information that can be conveyed to human perceptual system

 - show magnitude vs. identity

 - accuracy of perception

 - number of discriminable bins

→ Shape

→ Tilt

→ Size

→ Length

→ Area

→ Volume

Visual encoding

- analyze idiom structure
 - as combination of marks and channels

1:
vertical position

mark: line

2:
vertical position
horizontal position

mark: point

3:

Accuracy: Vis experiments

Cleveland & McGill's Results

Crowdsourced Results

[Crowdsourcing Graphical Perception: Using Mechanical Turk to Assess Visualization Design. Heer and Bostock. Proc ACM Conf. Human Factors in Computing Systems (CHI) 2010, p. 203–212.]

Discriminability: How many usable steps?

- must be sufficient for number of attribute levels to show
 - linewidth: few bins

[mappa.mundi.net/maps/maps_014/telegeography.html]

Separability vs. Integrality

Position
+ Hue (Color)

Fully separable

2 groups each

Size
+ Hue (Color)

Some interference

2 groups each

Width
+ Height

Some/significant
interference

3 groups total:
integral area

Red
+ Green

Major interference

4 groups total:
integral hue

Popout

- find the red dot
 - how long does it take?
- parallel processing on many individual channels
 - speed independent of distractor count
 - speed depends on channel and amount of difference from distractors
- serial search for (almost all) combinations
 - speed depends on number of distractors

Popout

- many channels: tilt, size, shape, proximity, shadow direction, ...
- but not all! parallel line pairs do not pop out from tilted pairs

Grouping

- containment
- connection

- proximity
 - same spatial region
- similarity
 - same values as other categorical channels

Marks as Links

➔ Containment

Recursive Subdivision

② Axis Orientation

→ Rectilinear

→ Parallel

→ Radial

② Layout Density

→ Dense

→ Space-Filling

Keys and values

- key
 - independent attribute
 - used as unique index to look up items
 - simple tables: 1 key
 - multidimensional tables: multiple keys
- value
 - dependent attribute, value of cell
- classify arrangements by key count
 - 0, 1, 2, many...

→ Tables

→ *Multidimensional Table*

⊕ Express Values

→ 1 Key
List

→ 2 Keys
Matrix

→ 3 Keys
Volume

→ Many Keys
Recursive Subdivision

Idiom: scatterplot

- **express** values
 - quantitative attributes
- no keys, only values
 - data
 - 2 quant attribs
 - mark: points
 - channels
 - horiz + vert position
 - tasks
 - find trends, outliers, distribution, correlation, clusters
 - scalability
 - hundreds of items

⊞ Express Values

Some keys: Categorical regions

→ Separate

→ Order

→ Align

- **regions**: contiguous bounded areas distinct from each other
 - using space to **separate** (proximity)
 - following expressiveness principle for categorical attributes
- use ordered attribute to **order** and **align** regions

→ 1 Key
List

→ 2 Keys
Matrix

→ 3 Keys
Volume

→ Many Keys
Recursive Subdivision

Idiom: bar chart

- one key, one value

- data

- 1 categ attrib, 1 quant attrib

- mark: lines

- channels

- length to express quant value
- spatial regions: one per mark
 - separated horizontally, aligned vertically
 - ordered by quant attrib

- » by label (alphabetical), by length attrib (data-driven)

- task

- compare, lookup values

- scalability

- dozens to hundreds of levels for key attrib

Idiom: stacked bar chart

- one more key
 - data
 - 2 categ attrib, 1 quant attrib
 - mark: vertical stack of line marks
 - **glyph**: composite object, internal structure from multiple marks
 - channels
 - length and color hue
 - spatial regions: one per glyph
 - aligned: full glyph, lowest bar component
 - unaligned: other bar components
 - task
 - part-to-whole relationship
 - scalability
 - several to one dozen levels for stacked attrib

[Using Visualization to Understand the Behavior of Computer Systems. Bosch. Ph.D. thesis, Stanford Computer Science, 2001.]

Idiom: **streamgraph**

- generalized stacked graph
 - emphasizing horizontal continuity
 - vs vertical items
 - data
 - 1 categ key attrib (artist)
 - 1 ordered key attrib (time)
 - 1 quant value attrib (counts)
 - derived data
 - geometry: layers, where height encodes counts
 - 1 quant attrib (layer ordering)
 - scalability
 - hundreds of time keys
 - dozens to hundreds of artist keys
 - more than stacked bars, since most layers don't extend across whole chart

[Stacked Graphs Geometry & Aesthetics. Byron and Wattenberg. IEEE Trans. Visualization and Computer Graphics (Proc. InfoVis 2008) 14(6): 1245–1252, (2008).]

Idiom: **line chart / dot plot**

- one key, one value

- data

- 2 quant attribs

- mark: points

- line connection marks between them

- channels

- aligned lengths to express quant value
- separated and ordered by key attrib into horizontal regions

- task

- find trend

- connection marks emphasize ordering of items along key axis by explicitly showing relationship between one item and the next

Choosing bar vs line charts

- depends on type of key attrib
 - bar charts if categorical
 - line charts if ordered
- do not use line charts for categorical key attribs
 - violates expressiveness principle
 - implication of trend so strong that it overrides semantics!
 - “The more male a person is, the taller he/she is”

after [Bars and Lines: A Study of Graphic Communication. Zacks and Tversky. *Memory and Cognition* 27:6 (1999), 1073–1079.]

Idiom: heatmap

- two keys, one value

- data

- 2 categ attribs (gene, experimental condition)
 - 1 quant attrib (expression levels)

- marks: area

- separate and align in 2D matrix
 - indexed by 2 categorical attributes

- channels

- color by quant attrib
 - (ordered diverging colormap)

- task

- find clusters, outliers

- scalability

- 1K categorical levels, 1M items; only ~10 quantitative attribute levels

→ 1 Key
List

→ 2 Keys
Matrix

→ Many Keys
Recursive Subdivision

➔ Axis Orientation

➔ Rectilinear

➔ Parallel

➔ Radial

Idioms: scatterplot matrix, parallel coordinates

- scatterplot matrix (SPLOM)

- rectilinear axes, point mark
- all possible pairs of axes
- scalability
 - one dozen attribs
 - dozens to hundreds of items

- parallel coordinates

- parallel axes, jagged line representing item
- rectilinear axes, item as point
 - axis ordering is major challenge

- scalability

- dozens of attribs
- hundreds of items

Scatterplot Matrix

Parallel Coordinates

Table

Math	Physics	Dance	Drama
85	95	70	65
90	80	60	50
65	50	90	90
50	40	95	80
40	60	80	90

Task: Correlation

- scatterplot matrix
 - positive correlation
 - diagonal low-to-high
 - negative correlation
 - diagonal high-to-low
 - uncorrelated
- parallel coordinates
 - positive correlation
 - parallel line segments
 - negative correlation
 - all segments cross at halfway point
 - uncorrelated
 - scattered crossings

[A layered grammar of graphics. Wickham. *Journ. Computational and Graphical Statistics* 19:1 (2010), 3–28.]

Figure 3. Parallel Coordinate Plot of Six-Dimensional Data Illustrating Correlations of $\rho = 1, .8, .2, 0, -.2, -.8, \text{ and } -1$.

[Hyperdimensional Data Analysis Using Parallel Coordinates. Wegman. *Journ. American Statistical Association* 85:411 (1990), 664–675.]

Idioms: pie chart, polar area chart

- pie chart

- area marks with angle channel

- accuracy: angle/area much less accurate than line length

- arclength also less accurate than line length

- polar area chart

- area marks with length channel

- more direct analog to bar charts

- data

- I categ key attrib, I quant value attrib

- task

- part-to-whole judgements

Idioms: **normalized stacked bar chart**

- task
 - part-to-whole judgements
- **normalized stacked bar chart**
 - stacked bar chart, normalized to full vert height
 - single stacked bar equivalent to full pie
 - high information density: requires narrow rectangle
- **pie chart**
 - information density: requires large circle

<http://bl.ocks.org/mbostock/3887235>,

<http://bl.ocks.org/mbostock/3886208>,

<http://bl.ocks.org/mbostock/3886394>.

Idiom: **glyphmaps**

- rectilinear good for linear vs nonlinear trends
- radial good for cyclic patterns

➔ Axis Orientation

➔ Rectilinear

➔ Parallel

➔ Radial

[Glyph-maps for Visually Exploring Temporal Patterns in Climate Data and Models. Wickham, Hofmann, Wickham, and Cook. *Environmetrics* 23:5 (2012), 382–393.]

Orientation limitations

- **rectilinear: scalability wrt #axes**
 - 2 axes best
 - 3 problematic
 - more in afternoon
 - 4+ impossible
- **parallel: unfamiliarity, training time**
- **radial: perceptual limits**
 - angles lower precision than lengths
 - asymmetry between angle and length
 - can be exploited!

[Uncovering Strengths and Weaknesses of Radial Visualizations - an Empirical Approach. Diehl, Beck and Burch. IEEE TVCG (Proc. InfoVis) 16(6):935–942, 2010.]

➔ **Axis Orientation**

➔ Rectilinear

➔ Parallel

➔ Radial

Outline

- **Session 1** 9-10:30am
 - Analysis: What, Why, How
 - Marks and Channels
 - Arrange Tables
 - **Arrange Spatial Data**
 - Arrange Networks and Trees
- **Session 2** 10:50am-12:20pm
 - Map Color and Other Channels
 - Manipulate: Change, Select, Navigate
 - Facet: Juxtapose, Partition, Superimpose
 - Reduce: Filter, Aggregate
 - Embed: Focus+Context

Arrange spatial data

→ Use Given

→ Geometry

→ *Geographic*

→ *Other Derived*

→ Spatial Fields

→ *Scalar Fields (one value per cell)*

→ *Isocontours*

→ *Direct Volume Rendering*

→ *Vector and Tensor Fields (many values per cell)*

→ *Flow Glyphs (local)*

→ *Geometric (sparse seeds)*

→ *Textures (dense seeds)*

→ *Features (globally derived)*

Idiom: **choropleth map**

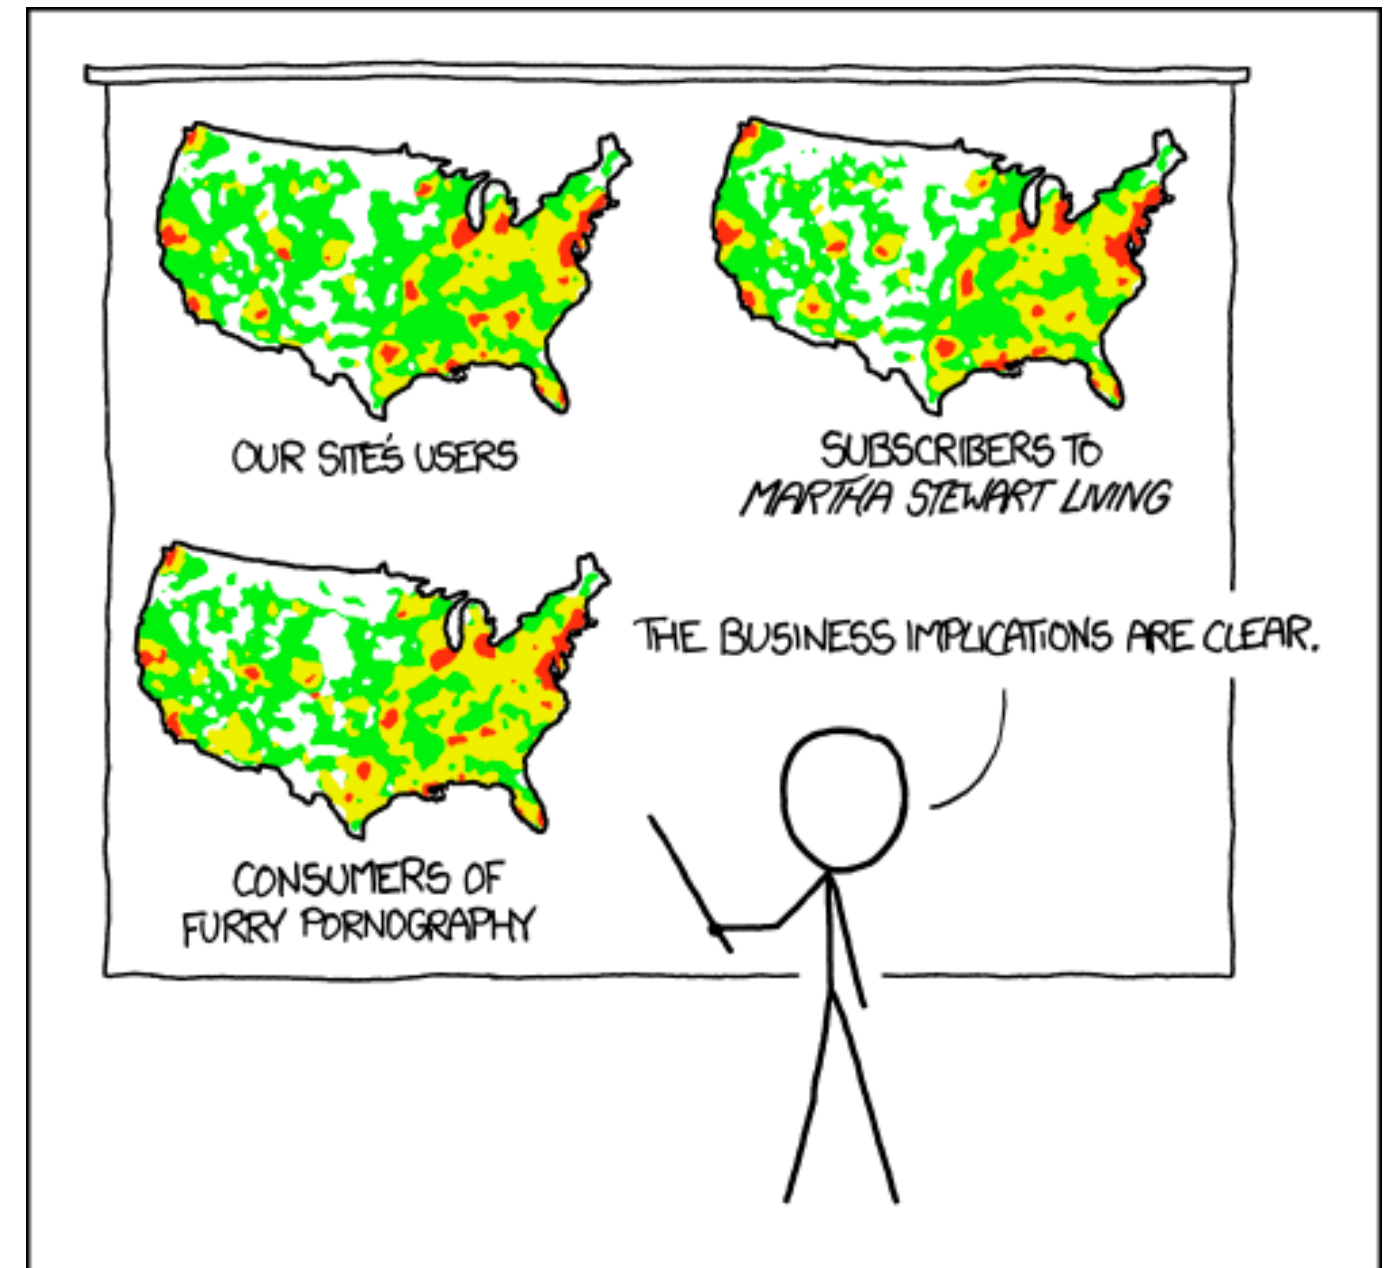

- **use** given spatial data
 - when central task is understanding spatial relationships
- **data**
 - geographic geometry
 - table with 1 quant attribute per region
- **encoding**
 - use given geometry for area mark boundaries
 - sequential segmented colormap *[more later]*

<http://bl.ocks.org/mbostock/4060606>

Beware: Population maps trickiness!

- consider when to normalize by population density
- general issue
 - absolute counts vs relative/normalized data

PET PEEVE #208:
GEOGRAPHIC PROFILE MAPS WHICH ARE
BASICALLY JUST POPULATION MAPS

[<https://xkcd.com/1138>]

Idiom: **topographic map**

- data
 - geographic geometry
 - scalar spatial field
 - 1 quant attribute per grid cell
- derived data
 - isoline geometry
 - isocontours computed for specific levels of scalar values

Land Information New Zealand Data Service

Idioms: **isosurfaces**, **direct volume rendering**

- **data**
 - scalar spatial field
 - 1 quant attribute per grid cell
- **task**
 - shape understanding, spatial relationships
- **isosurface**
 - derived data: isocontours computed for specific levels of scalar values
- **direct volume rendering**
 - transfer function maps scalar values to color, opacity
 - no derived geometry

[Interactive Volume Rendering Techniques. Kniss. Master's thesis, University of Utah Computer Science, 2002.]

[Multidimensional Transfer Functions for Volume Rendering. Kniss, Kindlmann, and Hansen. In The Visualization Handbook, edited by Charles Hansen and Christopher Johnson, pp. 189–210. Elsevier, 2005.]

Vector and tensor fields

- data
 - many attribs per cell
- idiom families
 - flow glyphs
 - purely local
 - geometric flow
 - derived data from tracing particle trajectories
 - sparse set of seed points
 - texture flow
 - derived data, dense seeds
 - feature flow
 - global computation to detect features
 - encoded with one of methods above

[Comparing 2D vector field visualization methods: A user study. Laidlaw et al. *IEEE Trans. Visualization and Computer Graphics (TVCG)* 11:1 (2005), 59–70.]

[Topology tracking for the visualization of time-dependent two-dimensional flows. Tricoche, Wischgoll, Scheuermann, and Hagen. *Computers & Graphics* 26:2 (2002), 249–257.]

Idiom: **similarity-clustered streamlines**

- data
 - 3D vector field
- derived data (from field)
 - streamlines: trajectory particle will follow
- derived data (per streamline)
 - curvature, torsion, tortuosity
 - signature: complex weighted combination
 - compute cluster hierarchy across all signatures
 - encode: color and opacity by cluster
- tasks
 - find features, query shape
- scalability
 - millions of samples, hundreds of streamlines

[Similarity Measures for Enhancing Interactive Streamline Seeding. McLoughlin, Jones, Laramee, Malki, Masters, and Hansen. IEEE Trans. Visualization and Computer Graphics 19:8 (2013), 1342–1353.]

Outline

- **Session 1** 9-10:30am
 - Analysis: What, Why, How
 - Marks and Channels
 - Arrange Tables
 - Arrange Spatial Data
 - **Arrange Networks and Trees**
- **Session 2** 10:50am-12:20pm
 - Map Color and Other Channels
 - Manipulate: Change, Select, Navigate
 - Facet: Juxtapose, Partition, Superimpose
 - Reduce: Filter, Aggregate
 - Embed: Focus+Context

Arrange networks and trees

→ Node–Link Diagrams Connection Marks

✓ NETWORKS ✓ TREES

→ Adjacency Matrix Derived Table

✓ NETWORKS ✓ TREES

→ Enclosure Containment Marks

✗ NETWORKS ✓ TREES

Idiom: **force-directed placement**

- visual encoding: node-link diagram
 - link connection marks, node point marks
- algorithm: energy minimization
 - analogy: nodes repel, links draw together like springs
 - optimization problem: minimize crossings
- spatial position: no meaning directly encoded
 - sometimes proximity meaningful
 - sometimes proximity arbitrary, artifact of layout algorithm
- tasks
 - explore topology; locate paths, clusters
- scalability
 - node/edge density $E < 4N$

<http://mbostock.github.com/d3/ex/force.html>

Idiom: **sfdp** (multi-level force-directed placement)

- data
 - original: network
 - derived: cluster hierarchy atop it
- considerations
 - better algorithm for same encoding technique
 - same: fundamental use of space
 - hierarchy used for algorithm speed/quality but not shown explicitly
- scalability
 - nodes, edges: 1K-10K
 - hairball problem still hits eventually

[Efficient and high quality force-directed graph drawing. Hu. The Mathematica Journal 10:37–71, 2005.]

Idiom: adjacency matrix view

- data: network
 - transform into same data/encoding as heatmap
- derived data: table from network
 - 1 quant attrib
 - weighted edge between nodes
 - 2 categ attribs: node list x 2
- visual encoding
 - cell shows presence/absence of edge
- scalability
 - 1K nodes, 1M edges

[NodeTrix: a Hybrid Visualization of Social Networks. Henry, Fekete, and McGuffin. IEEE TVCG (Proc. InfoVis) 13(6):1302-1309, 2007.]

[Points of view: Networks. Gehlenborg and Wong. Nature Methods 9:115.]

Connection vs. adjacency comparison

- adjacency matrix strengths
 - predictability, scalability, supports reordering
 - some topology tasks trainable
- node-link diagram strengths
 - topology understanding, path tracing
 - intuitive, no training needed
- empirical study
 - node-link best for small networks
 - matrix best for large networks
 - if tasks don't involve topological structure!

<http://www.michaelmcguffin.com/courses/vis/patternsInAdjacencyMatrix.png>

[On the readability of graphs using node-link and matrix-based representations: a controlled experiment and statistical analysis. Ghoniem, Fekete, and Castagliola. Information Visualization 4:2 (2005), 114–135.]

Idiom: **treemap**

- data
 - tree
 - 1 quant attrib at leaf nodes
- encoding
 - area containment marks for hierarchical structure
 - rectilinear orientation
 - size encodes quant attrib
- tasks
 - query attribute at leaf nodes
- scalability
 - 1M leaf nodes

http://tulip.labri.fr/Documentation/3_7/userHandbook/html/ch06.html

Link marks: Connection and containment

- marks as links (vs. nodes)
 - common case in network drawing
 - 1D case: connection
 - ex: all node-link diagrams
 - emphasizes topology, path tracing
 - networks and trees
 - 2D case: containment
 - ex: all treemap variants
 - emphasizes attribute values at leaves (size coding)
 - only trees

➔ Connection

➔ Containment

Encode

→ Arrange

→ Express

→ Separate

→ Order

→ Align

→ Use

→ Map

from **categorical** and **ordered** attributes

→ Color

→ Hue

→ Saturation

→ Luminance

→ Size, Angle, Curvature, ...

→ Shape

→ Motion

Direction, Rate, Frequency, ...

Decomposing color

- first rule of color: do not talk about color!
 - color is confusing if treated as monolithic
- decompose into three channels
 - ordered can show magnitude
 - luminance
 - saturation
 - categorical can show identity
 - hue

Luminance

- need luminance for edge detection
 - fine-grained detail only visible through luminance contrast
 - legible text requires luminance contrast!
- HLS better than RGB for encoding but beware
 - L lightness \neq L^* luminance

Lightness information

Color information

Corners of the RGB color cube

L from HLS

All the same

Luminance values

[Seriously Colorful: Advanced Color Principles & Practices. Stone.Tableau Customer Conference 2014.]

Colormaps

→ Categorical

→ Ordered

→ Sequential

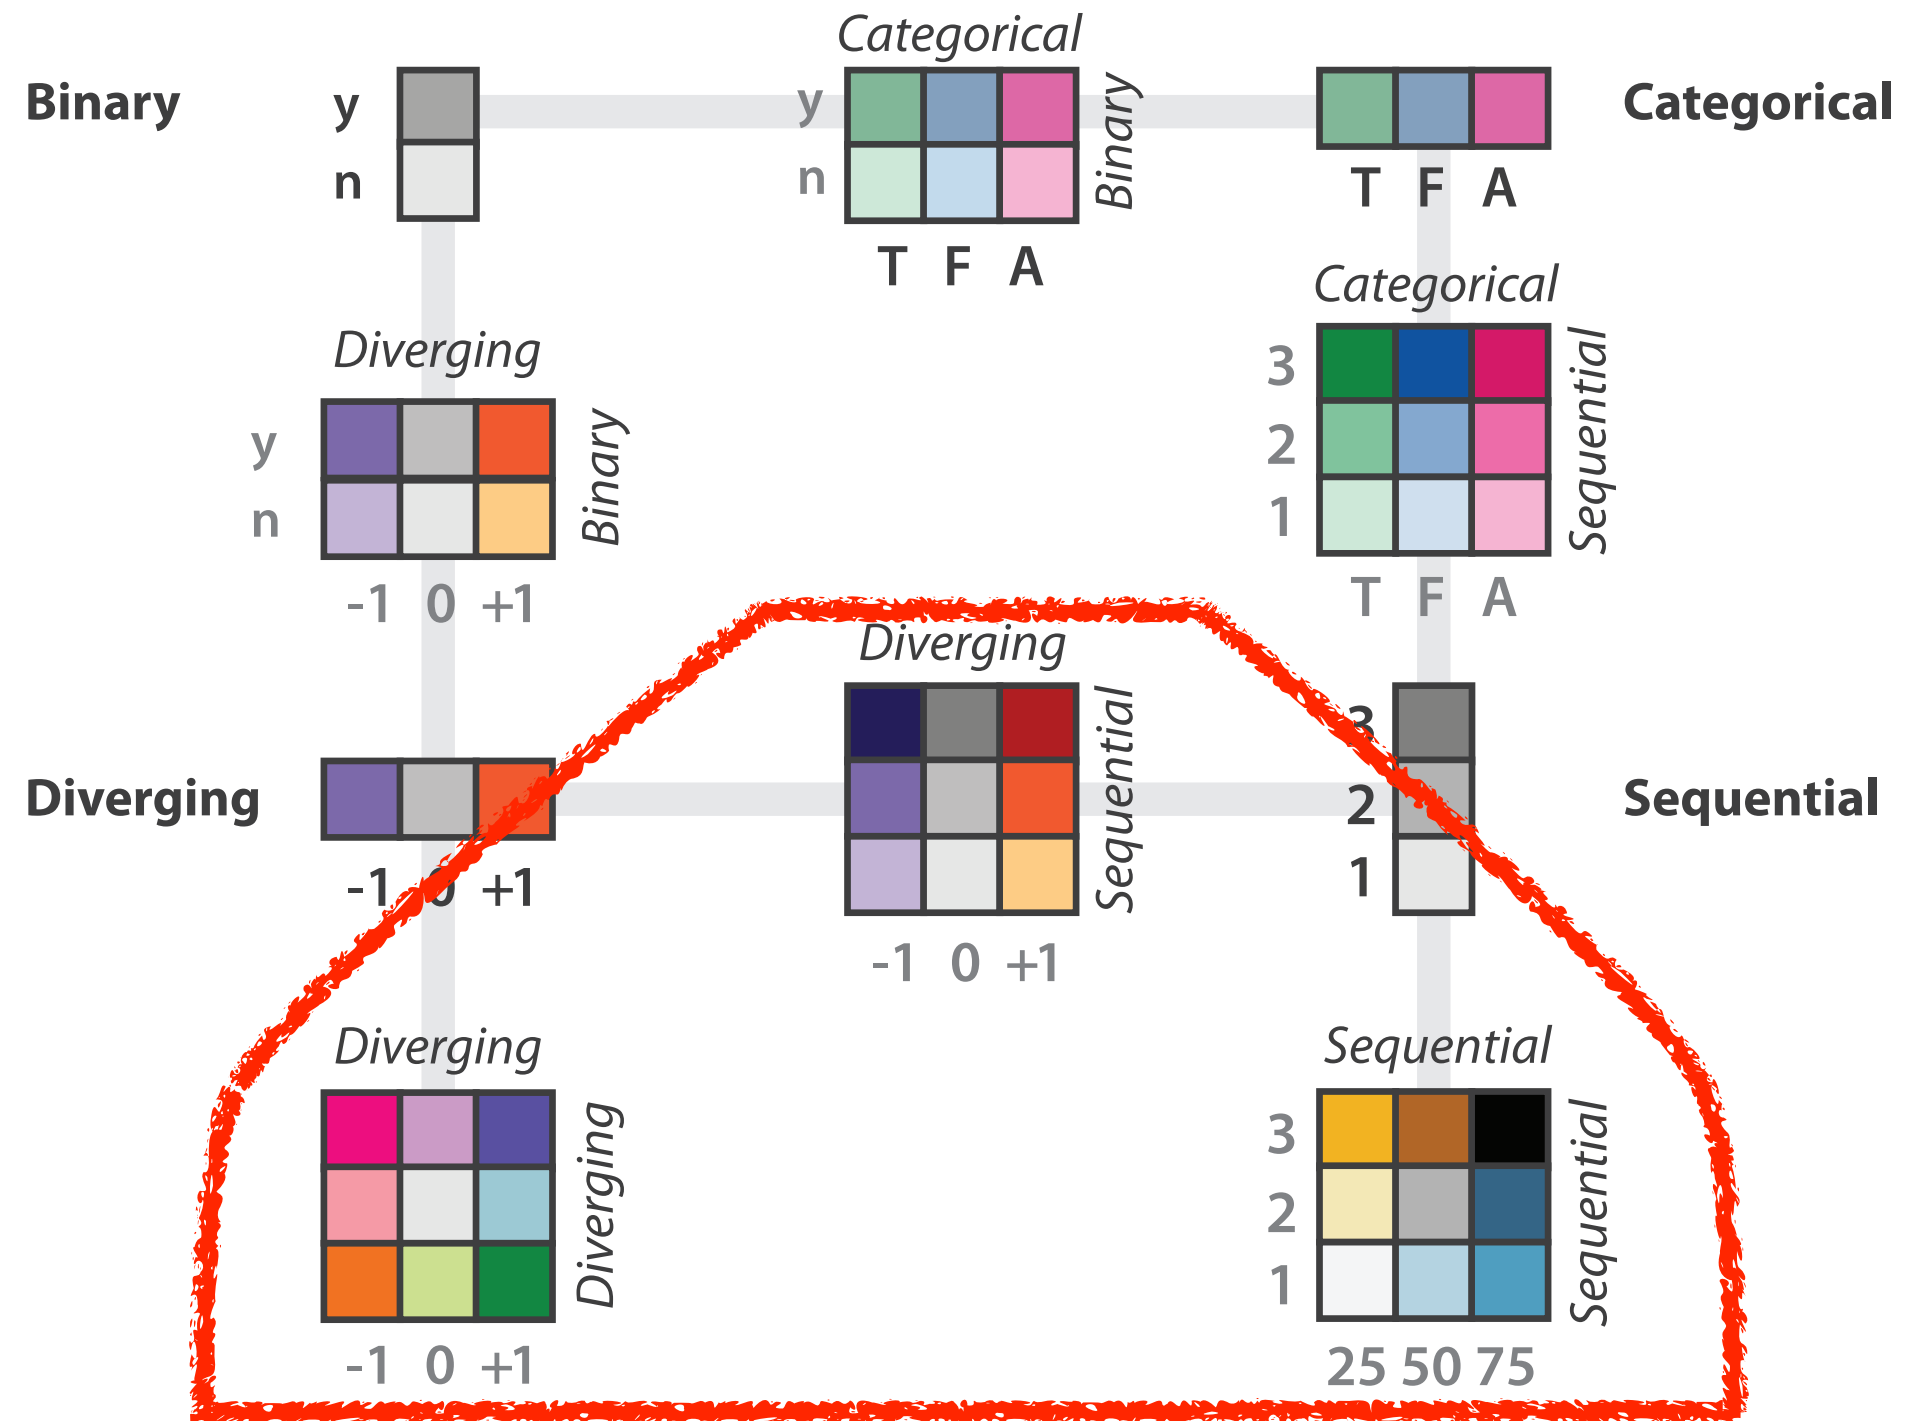

→ Diverging

→ Bivariate

use with care if more than two levels (binary)!

after [Color Use Guidelines for Mapping and Visualization. Brewer, 1994. <http://www.personal.psu.edu/faculty/cl/cab38/ColorSch/Schemes.html>]

Colormaps

→ Categorical

→ Ordered

→ Sequential

→ Diverging

→ Bivariate

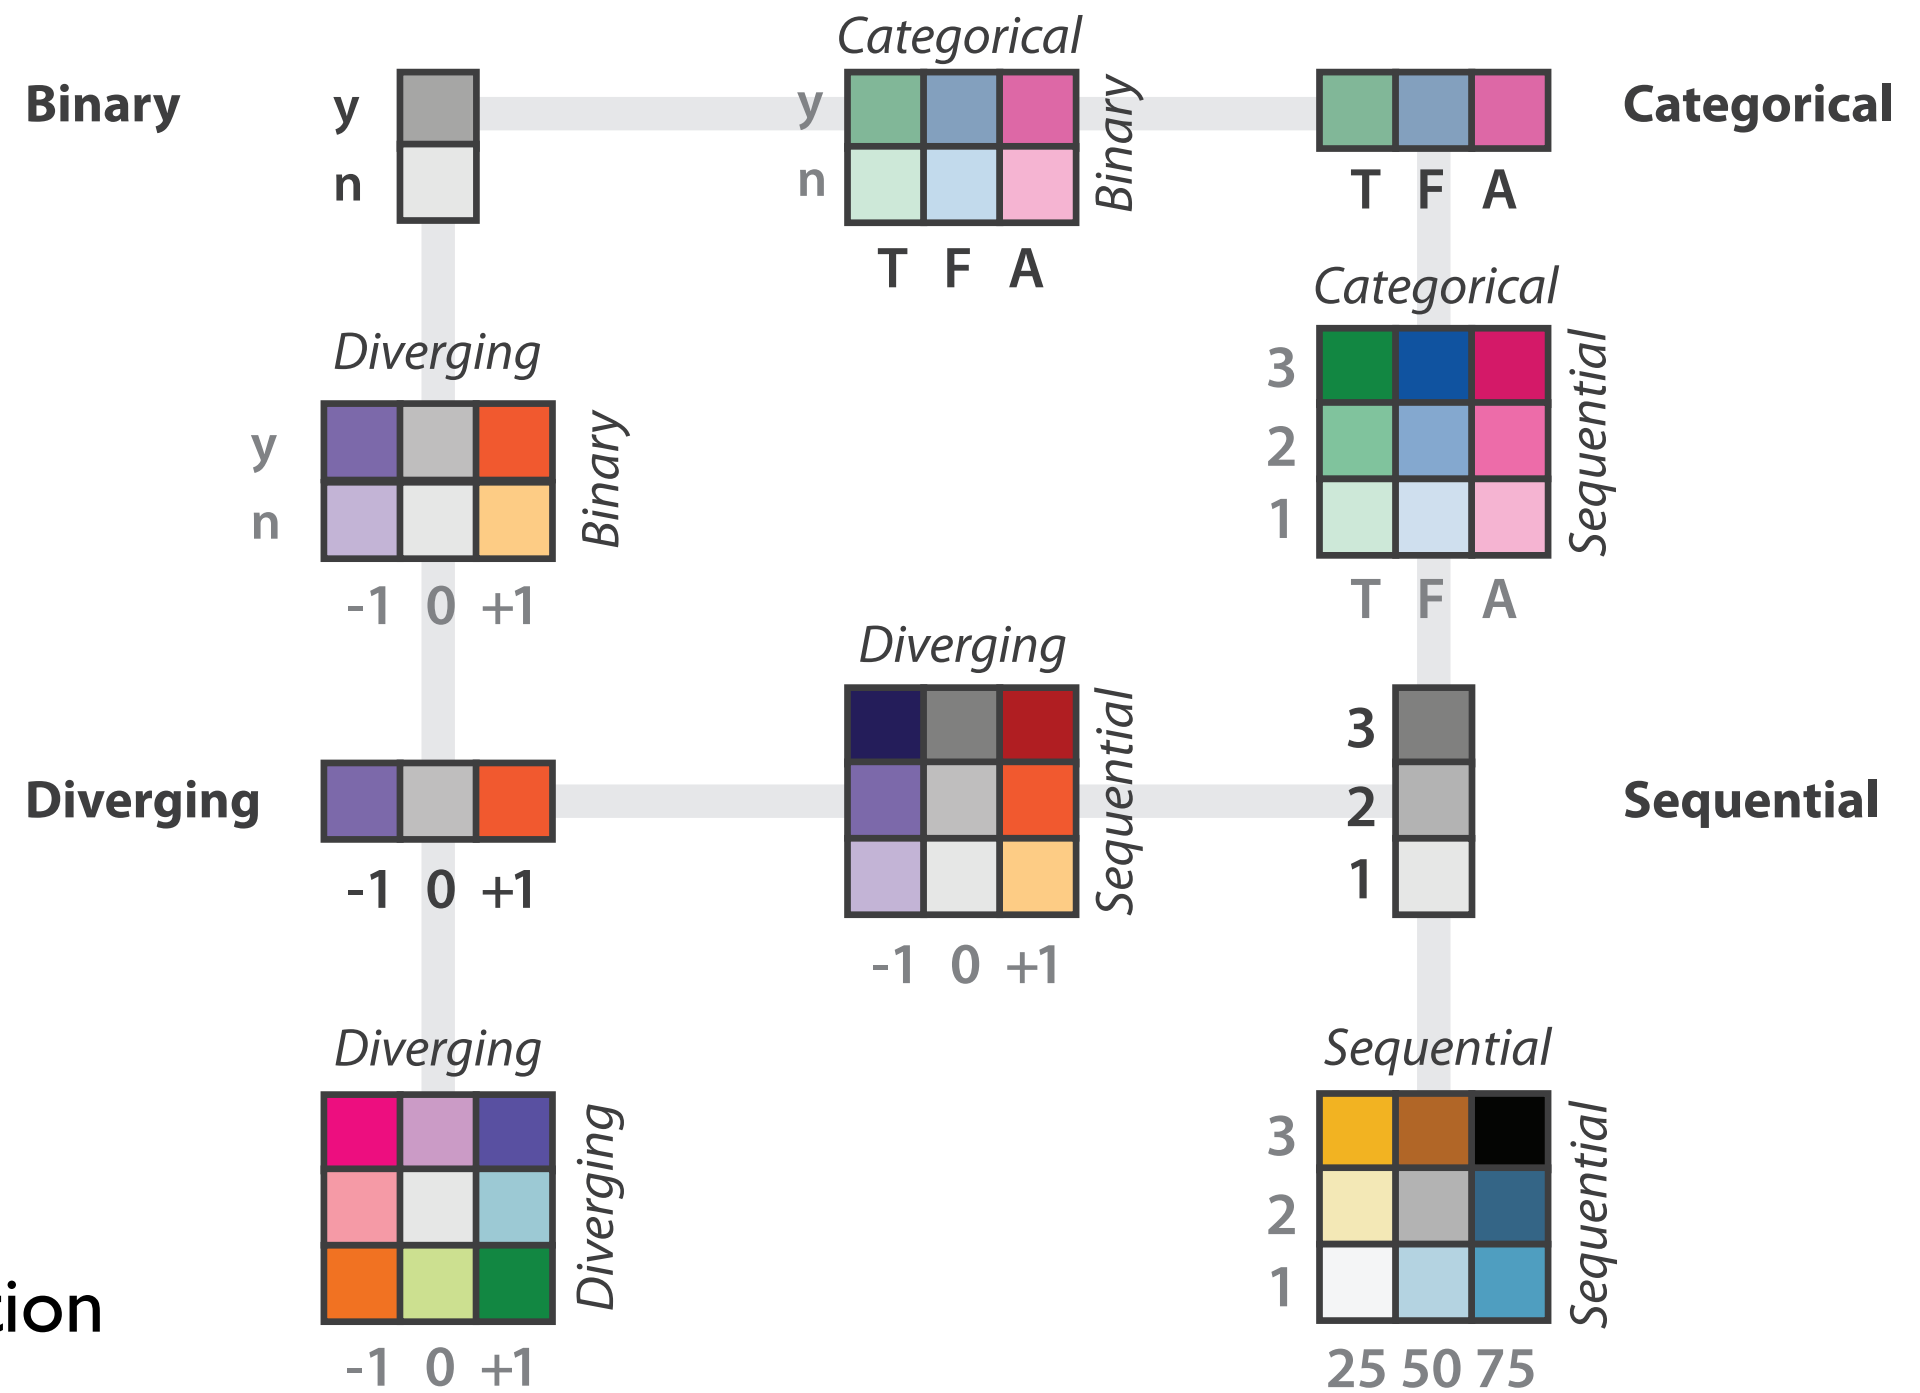

- color channel interactions

- size heavily affects salience

- small regions need high saturation
- large need low saturation

- saturation & luminance: 3-4 bins max

- also not separable from transparency

after [Color Use Guidelines for Mapping and Visualization. Brewer, 1994. <http://www.personal.psu.edu/faculty/cl/cab38/ColorSch/Schemes.html>]

Categorical color: Discriminability constraints

- noncontiguous small regions of color: only 6-12 bins

[Cinteny: flexible analysis and visualization of synteny and genome rearrangements in multiple organisms. Sinha and Meller. *BMC Bioinformatics*, 8:82, 2007.]

Ordered color: Rainbow is poor default

- problems
 - perceptually unordered
 - perceptually nonlinear
- benefits
 - fine-grained structure visible and nameable

[A Rule-based Tool for Assisting Colormap Selection. Bergman, Rogowitz, and Treinish. Proc. IEEE Visualization (Vis), pp. 118–125, 1995.]

[Why Should Engineers Be Worried About Color? Treinish and Rogowitz 1998. <http://www.research.ibm.com/people/llloyd/color/color.HTM>]

Ordered color: Rainbow is poor default

- problems
 - perceptually unordered
 - perceptually nonlinear
- benefits
 - fine-grained structure visible and nameable
- alternatives
 - large-scale structure: fewer hues

[A Rule-based Tool for Assisting Colormap Selection. Bergman, Rogowitz, and Treinish. Proc. IEEE Visualization (Vis), pp. 118–125, 1995.]

[Why Should Engineers Be Worried About Color? Treinish and Rogowitz 1998. <http://www.research.ibm.com/people/lloyd/color/color.HTM>]

Ordered color: Rainbow is poor default

- problems
 - perceptually unordered
 - perceptually nonlinear
- benefits
 - fine-grained structure visible and nameable
- alternatives
 - large-scale structure: fewer hues
 - fine structure: multiple hues with monotonically increasing luminance [eg viridis]

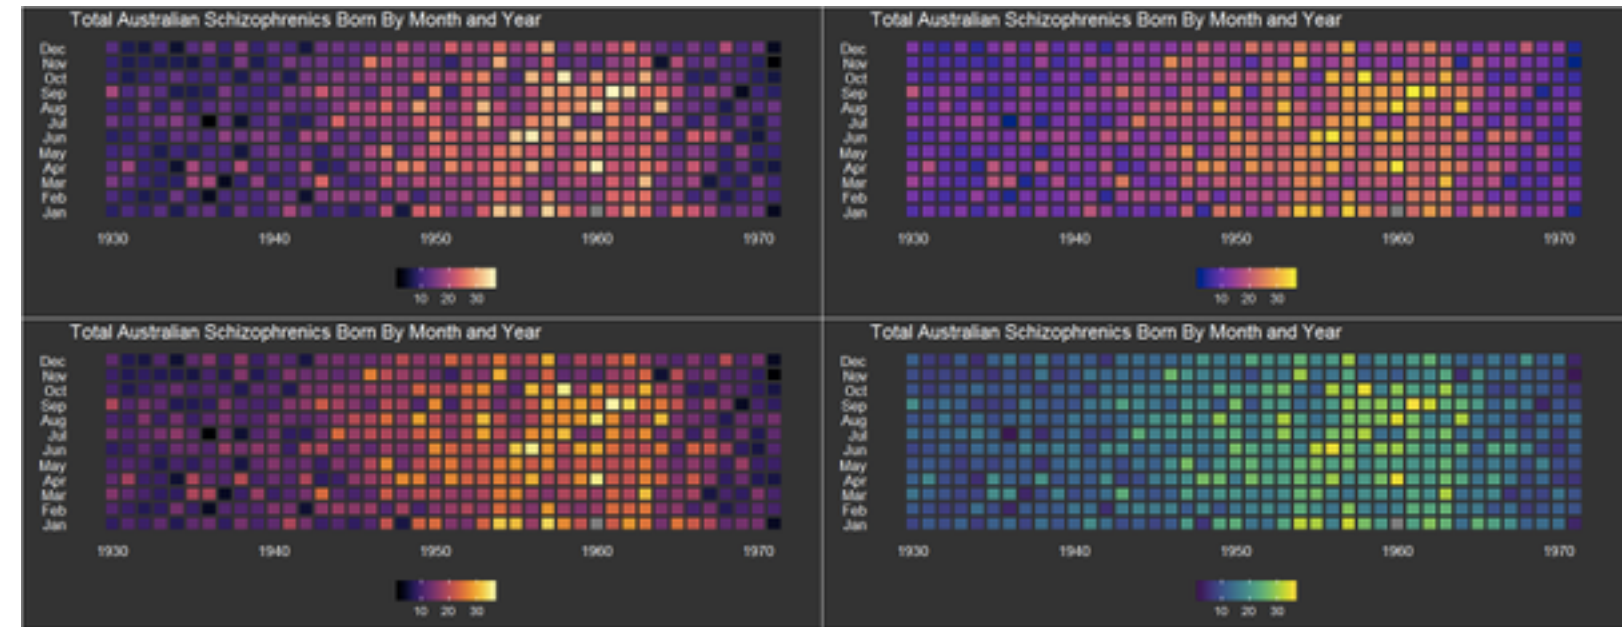

[A Rule-based Tool for Assisting Colormap Selection. Bergman, Rogowitz, and Treinish. Proc. IEEE Visualization (Vis), pp. 118–125, 1995.]

[Why Should Engineers Be Worried About Color? Treinish and Rogowitz 1998. <http://www.research.ibm.com/people/lloyd/color/color.HTM>]

Viridis / Magma

- monotonically increasing luminance, perceptually uniform
- colorful, colourblind-safe
 - R, python, D3

<https://cran.r-project.org/web/packages/viridis/vignettes/intro-to-viridis.html>

Ordered color: Rainbow is poor default

- problems
 - perceptually unordered
 - perceptually nonlinear
- benefits
 - fine-grained structure visible and nameable
- alternatives
 - large-scale structure: fewer hues
 - fine structure: multiple hues with monotonically increasing luminance [eg viridis]
 - categorical: segmented saturated rainbow is good!

[A Rule-based Tool for Assisting Colormap Selection. Bergman, Rogowitz, and Treinish. Proc. IEEE Visualization (Vis), pp. 118–125, 1995.]

[Why Should Engineers Be Worried About Color? Treinish and Rogowitz 1998. <http://www.research.ibm.com/people/lloyd/color/color.HTM>]

→ Superimpose

Reduce

→ Filter

→ Aggregate

→ Embed

What?

Why?

How?

How to handle complexity: 1 previous strategy + 3 more

→ *Derive*

Manipulate

→ Change

→ Select

→ Navigate

Facet

→ Juxtapose

→ Partition

→ Superimpose

Reduce

→ Filter

→ Aggregate

→ Embed

- derive new data to show within view
- change view over time
- facet across multiple views
- reduce items/attributes within single view

Manipulate

→ Change over Time

→ Select

→ Navigate

→ Item Reduction

→ Zoom
Geometric or *Semantic*

→ Pan/Translate

→ Constrained

→ Attribute Reduction

→ Slice

→ Cut

→ Project

Idiom: **Realign**

- stacked bars
 - easy to compare
 - first segment
 - total bar
- align to different segment
 - supports flexible comparison

System: **LineUp**

Navigate: Changing item visibility

- change viewpoint
 - changes which items are visible within view
 - camera metaphor
 - zoom
 - geometric zoom: familiar semantics
 - semantic zoom: adapt object representation based on available pixels
 - » dramatic change, or more subtle one
 - pan/translate
 - rotate
 - especially in 3D
 - constrained navigation
 - often with animated transitions
 - often based on selection set

➔ Navigate

➔ Item Reduction

➔ Zoom

Geometric or *Semantic*

➔ Pan/Translate

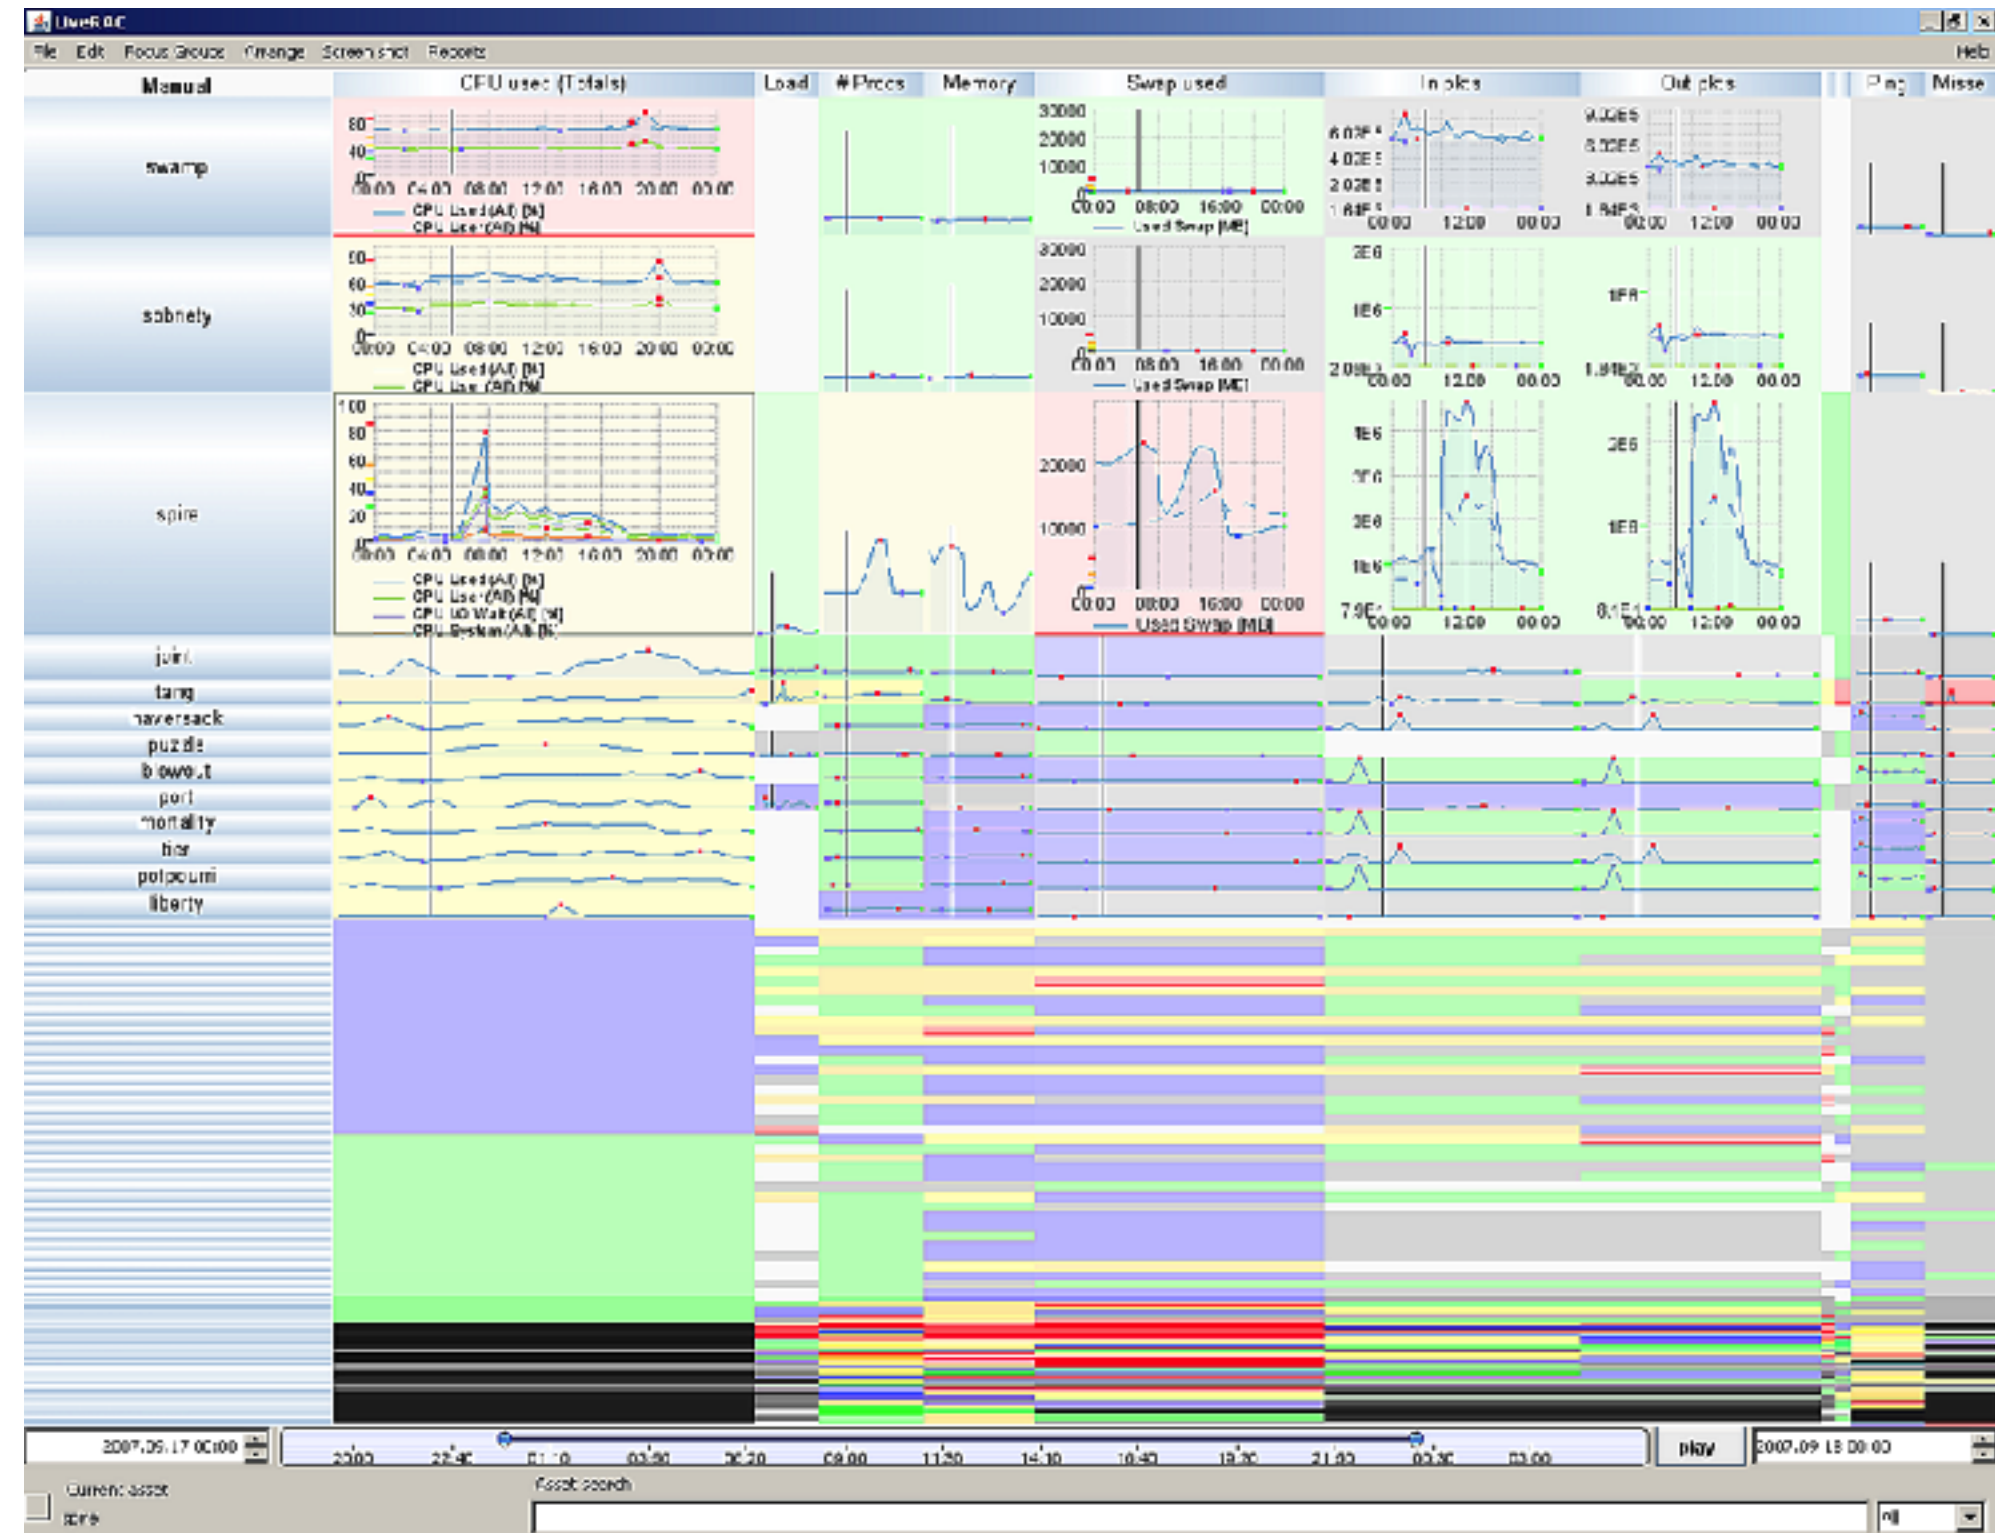

➔ Constrained

Idiom: Semantic zooming

System: LiveRAC

- visual encoding change
 - colored box
 - sparkline
 - simple line chart
 - full chart: axes and tickmarks

[LiveRAC - Interactive Visual Exploration of System Management Time-Series Data. McLachlan, Munzner, Koutsofios, and North. Proc. ACM Conf. Human Factors in Computing Systems (CHI), pp. 1483–1492, 2008.]

Navigate: Reducing attributes

- continuation of camera metaphor
 - slice
 - show only items matching specific value for given attribute: slicing plane
 - axis aligned, or arbitrary alignment
 - cut
 - show only items on far side of plane from camera
 - project
 - change mathematics of image creation
 - orthographic
 - perspective
 - many others: Mercator, cabinet, ...

→ Attribute Reduction

→ *Slice*

→ *Cut*

→ *Project*

Outline

- **Session 1** 9-10:30am
 - Analysis: What, Why, How
 - Marks and Channels
 - Arrange Tables
 - Arrange Spatial Data
 - Arrange Networks and Trees
- **Session 2** 10:50am-12:20pm
 - Map Color and Other Channels
 - Manipulate: Change, Select, Navigate
 - **Facet: Juxtapose, Partition, Superimpose**
 - Reduce: Filter, Aggregate
 - Embed: Focus+Context

Facet

→ Juxtapose

→ Partition

→ Superimpose

Juxtapose and coordinate views

→ Share Encoding: Same/Different

→ *Linked Highlighting*

→ Share Data: All/Subset/None

→ Share Navigation

Idiom: **Linked highlighting**

System: **EDV**

- see how regions contiguous in one view are distributed within another
 - powerful and pervasive interaction idiom
- encoding: different
 - ***multiform***
- data: all shared

[Visual Exploration of Large Structured Datasets. Wills. Proc. New Techniques and Trends in Statistics (NTTS), pp. 237–246. IOS Press, 1995.]

Idiom: **bird's-eye maps**

System: **Google Maps**

- encoding: same
- data: subset shared
- navigation: shared
 - bidirectional linking

- differences
 - viewpoint
 - (size)

- **overview-detail**

[A Review of Overview+Detail, Zooming, and Focus+Context Interfaces. Cockburn, Karlson, and Bederson. *ACM Computing Surveys* 41:1 (2008), 1–31.]

Idiom: Small multiples

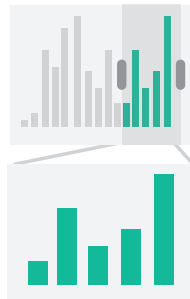

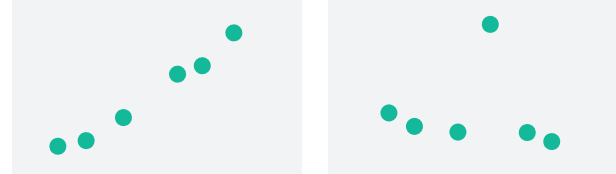

System: Cerebral

- encoding: same
- data: none shared
 - different attributes for node colors
 - (same network layout)
- navigation: shared

[Cerebral: Visualizing Multiple Experimental Conditions on a Graph with Biological Context. Barsky, Munzner, Gardy, and Kincaid. *IEEE Trans. Visualization and Computer Graphics (Proc. InfoVis 2008)* 14:6 (2008), 1253–1260.]

Coordinate views: Design choice interaction

		Data		
		All	Subset	None
Encoding	Same	Redundant	 Overview/ Detail	 Small Multiples
	Different	 Multiform	 Multiform, Overview/ Detail	No Linkage

- why juxtapose views?

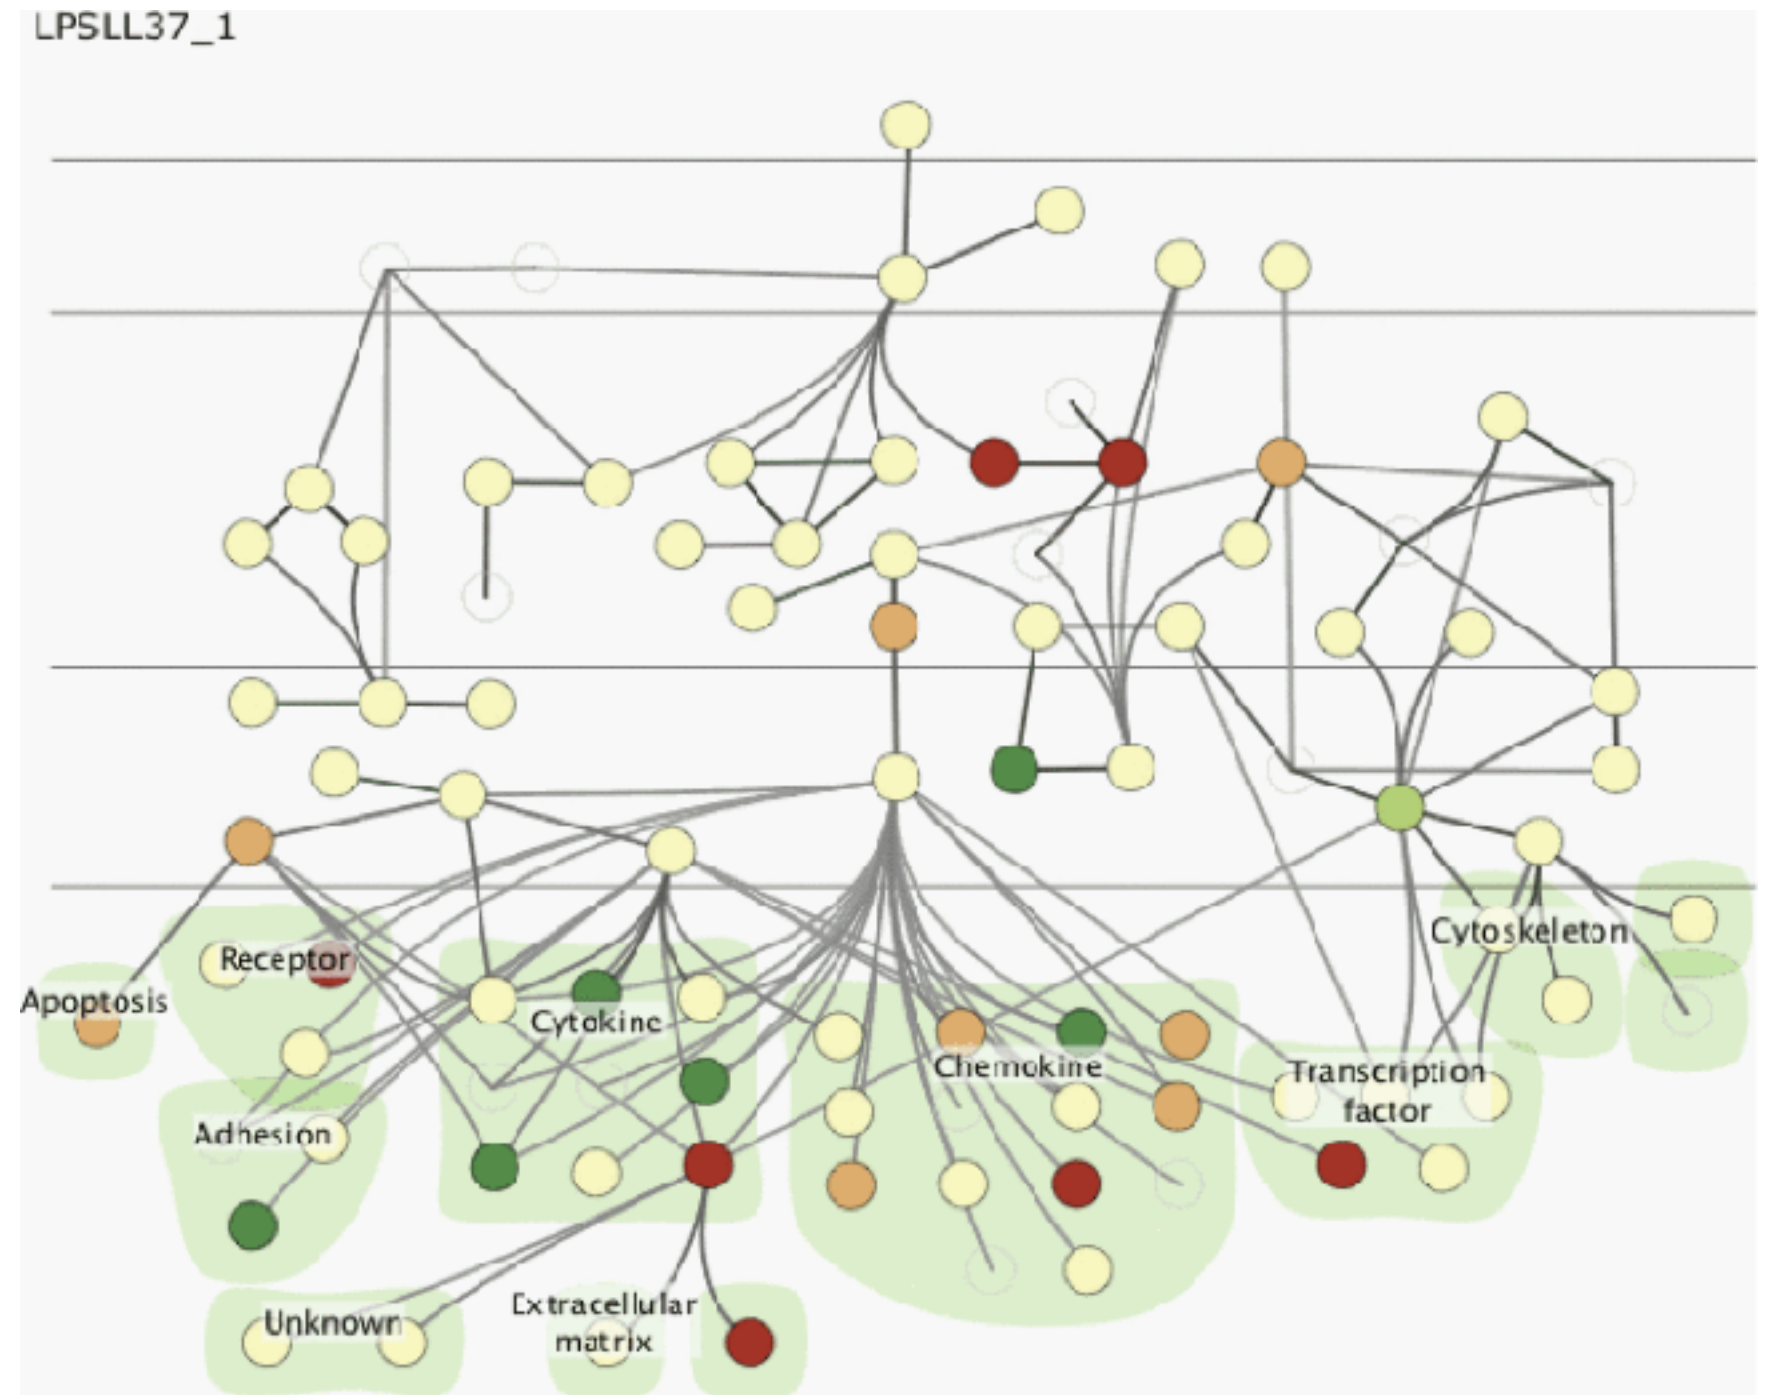

- benefits: eyes vs memory

- lower cognitive load to move eyes between 2 views than remembering previous state with single changing view

- costs: display area, 2 views side by side each have only half the area of one view

Why not animation?

- disparate frames and regions: comparison difficult
 - vs contiguous frames
 - vs small region
 - vs coherent motion of group
- safe special case
 - animated transitions

System: Improvise

- investigate power of multiple views
 - pushing limits on view count, interaction complexity
 - how many is ok?
 - open research question
 - reorderable lists
 - easy lookup
 - useful when linked to other encodings

[Building Highly-Coordinated Visualizations In Improvise. Weaver. Proc. IEEE Symp. Information Visualization (InfoVis), pp. 159–166, 2004.]

Partition into views

- how to divide data between views
 - split into regions by attributes
 - encodes association between items using spatial proximity
 - order of splits has major implications for what patterns are visible
- no strict dividing line
 - **view**: *big/detailed*
 - contiguous region in which visually encoded data is shown on the display
 - **glyph**: *small/iconic*
 - object with internal structure that arises from multiple marks

➔ Partition into Side-by-Side Views

Partitioning: List alignment

- single bar chart with grouped bars
 - split by state into regions
 - complex glyph within each region showing all ages
 - compare: easy within state, hard across ages

- small-multiple bar charts
 - split by age into regions
 - one chart per region
 - compare: easy within age, harder across states

Partitioning: Recursive subdivision

System: **HIVE**

- split by neighborhood
- then by type
- then time
 - years as rows
 - months as columns
- color by price
- neighborhood patterns
 - where it's expensive
 - where you pay much more for detached type

Partitioning: Recursive subdivision

System: **HIVE**

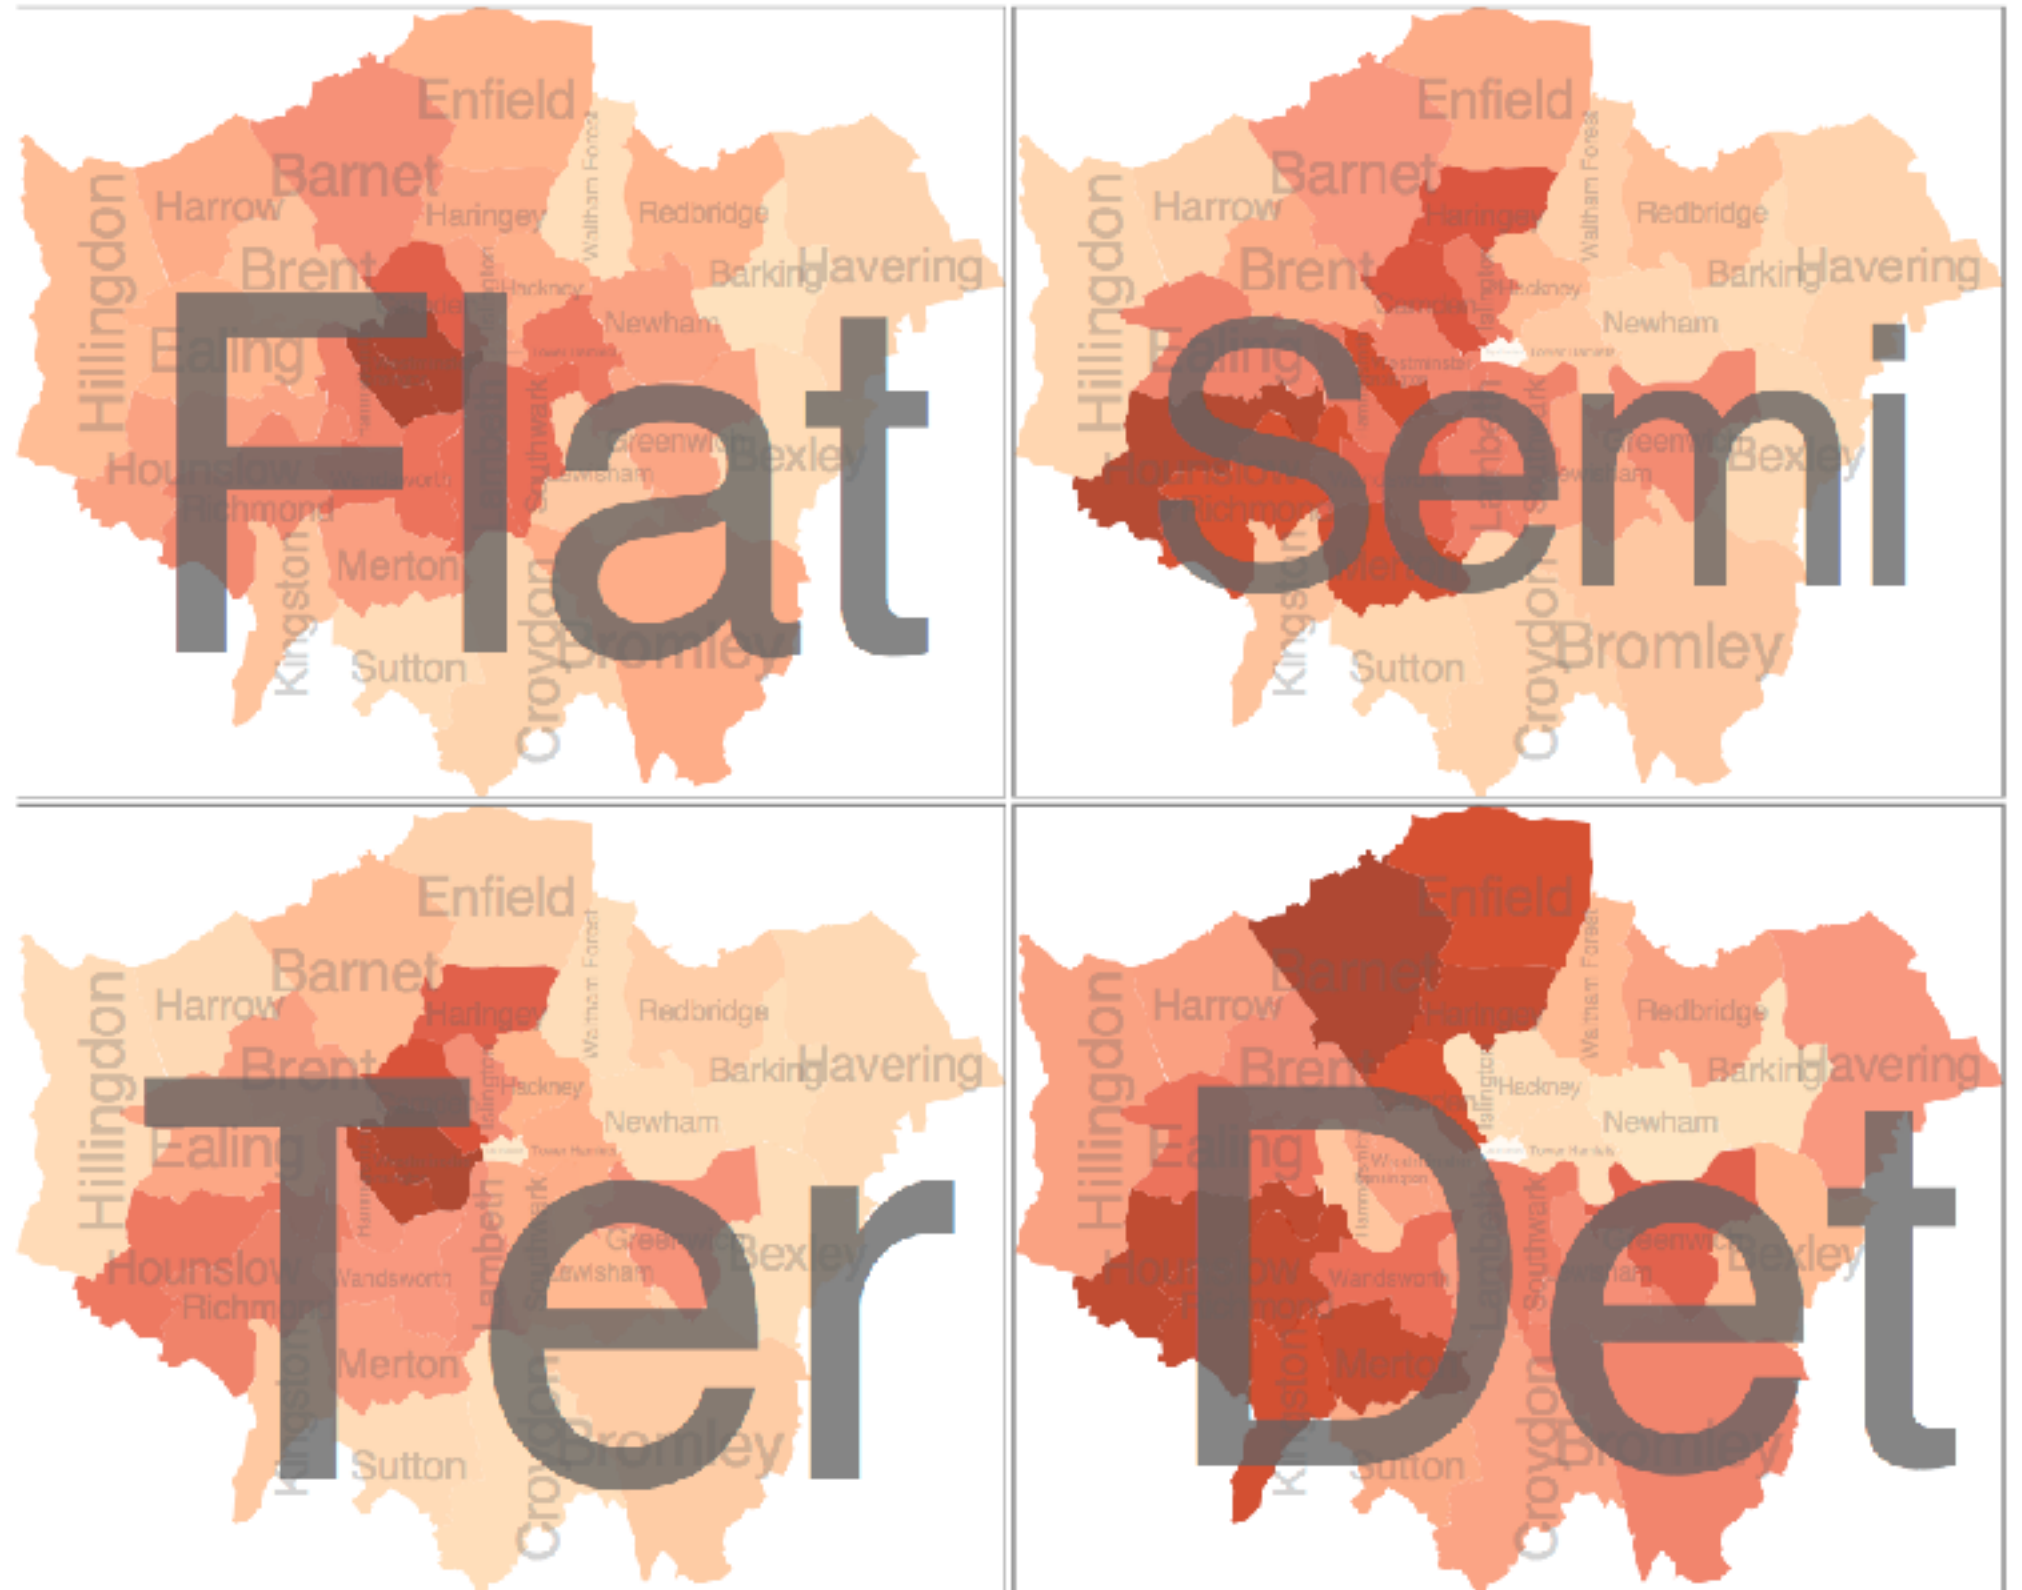

- switch order of splits
 - type then neighborhood
- switch color
 - by price variation
- type patterns
 - within specific type, which neighborhoods inconsistent

Partitioning: Recursive subdivision

System: **HIVE**

- different encoding for second-level regions
– choropleth maps

Partitioning: Recursive subdivision

System: **HIVE**

- size regions by sale counts
 - not uniformly
- result: treemap

Superimpose layers

- **layer**: set of objects spread out over region

- each set is visually distinguishable group

- extent: whole view

- design choices

- how many layers, how to distinguish?

- encode with different, nonoverlapping channels

- two layers achievable, three with careful design

- small static set, or dynamic from many possible?

⇒ Superimpose Layers

Static visual layering

- foreground layer: roads
 - hue, size distinguishing main from minor
 - high luminance contrast from background
- background layer: regions
 - desaturated colors for water, parks, land areas
- user can selectively focus attention
- “get it right in black and white”
 - check luminance contrast with greyscale view

[Get it right in black and white. Stone. 2010.

<http://www.stonesc.com/wordpress/2010/03/get-it-right-in-black-and-white>]

Superimposing limits

- few layers, but many lines
 - up to a few dozen
 - but not hundreds
- superimpose vs juxtapose: empirical study
 - superimposed for local, multiple for global
 - tasks
 - local: maximum, global: slope, discrimination
 - same screen space for all multiples vs single superimposed

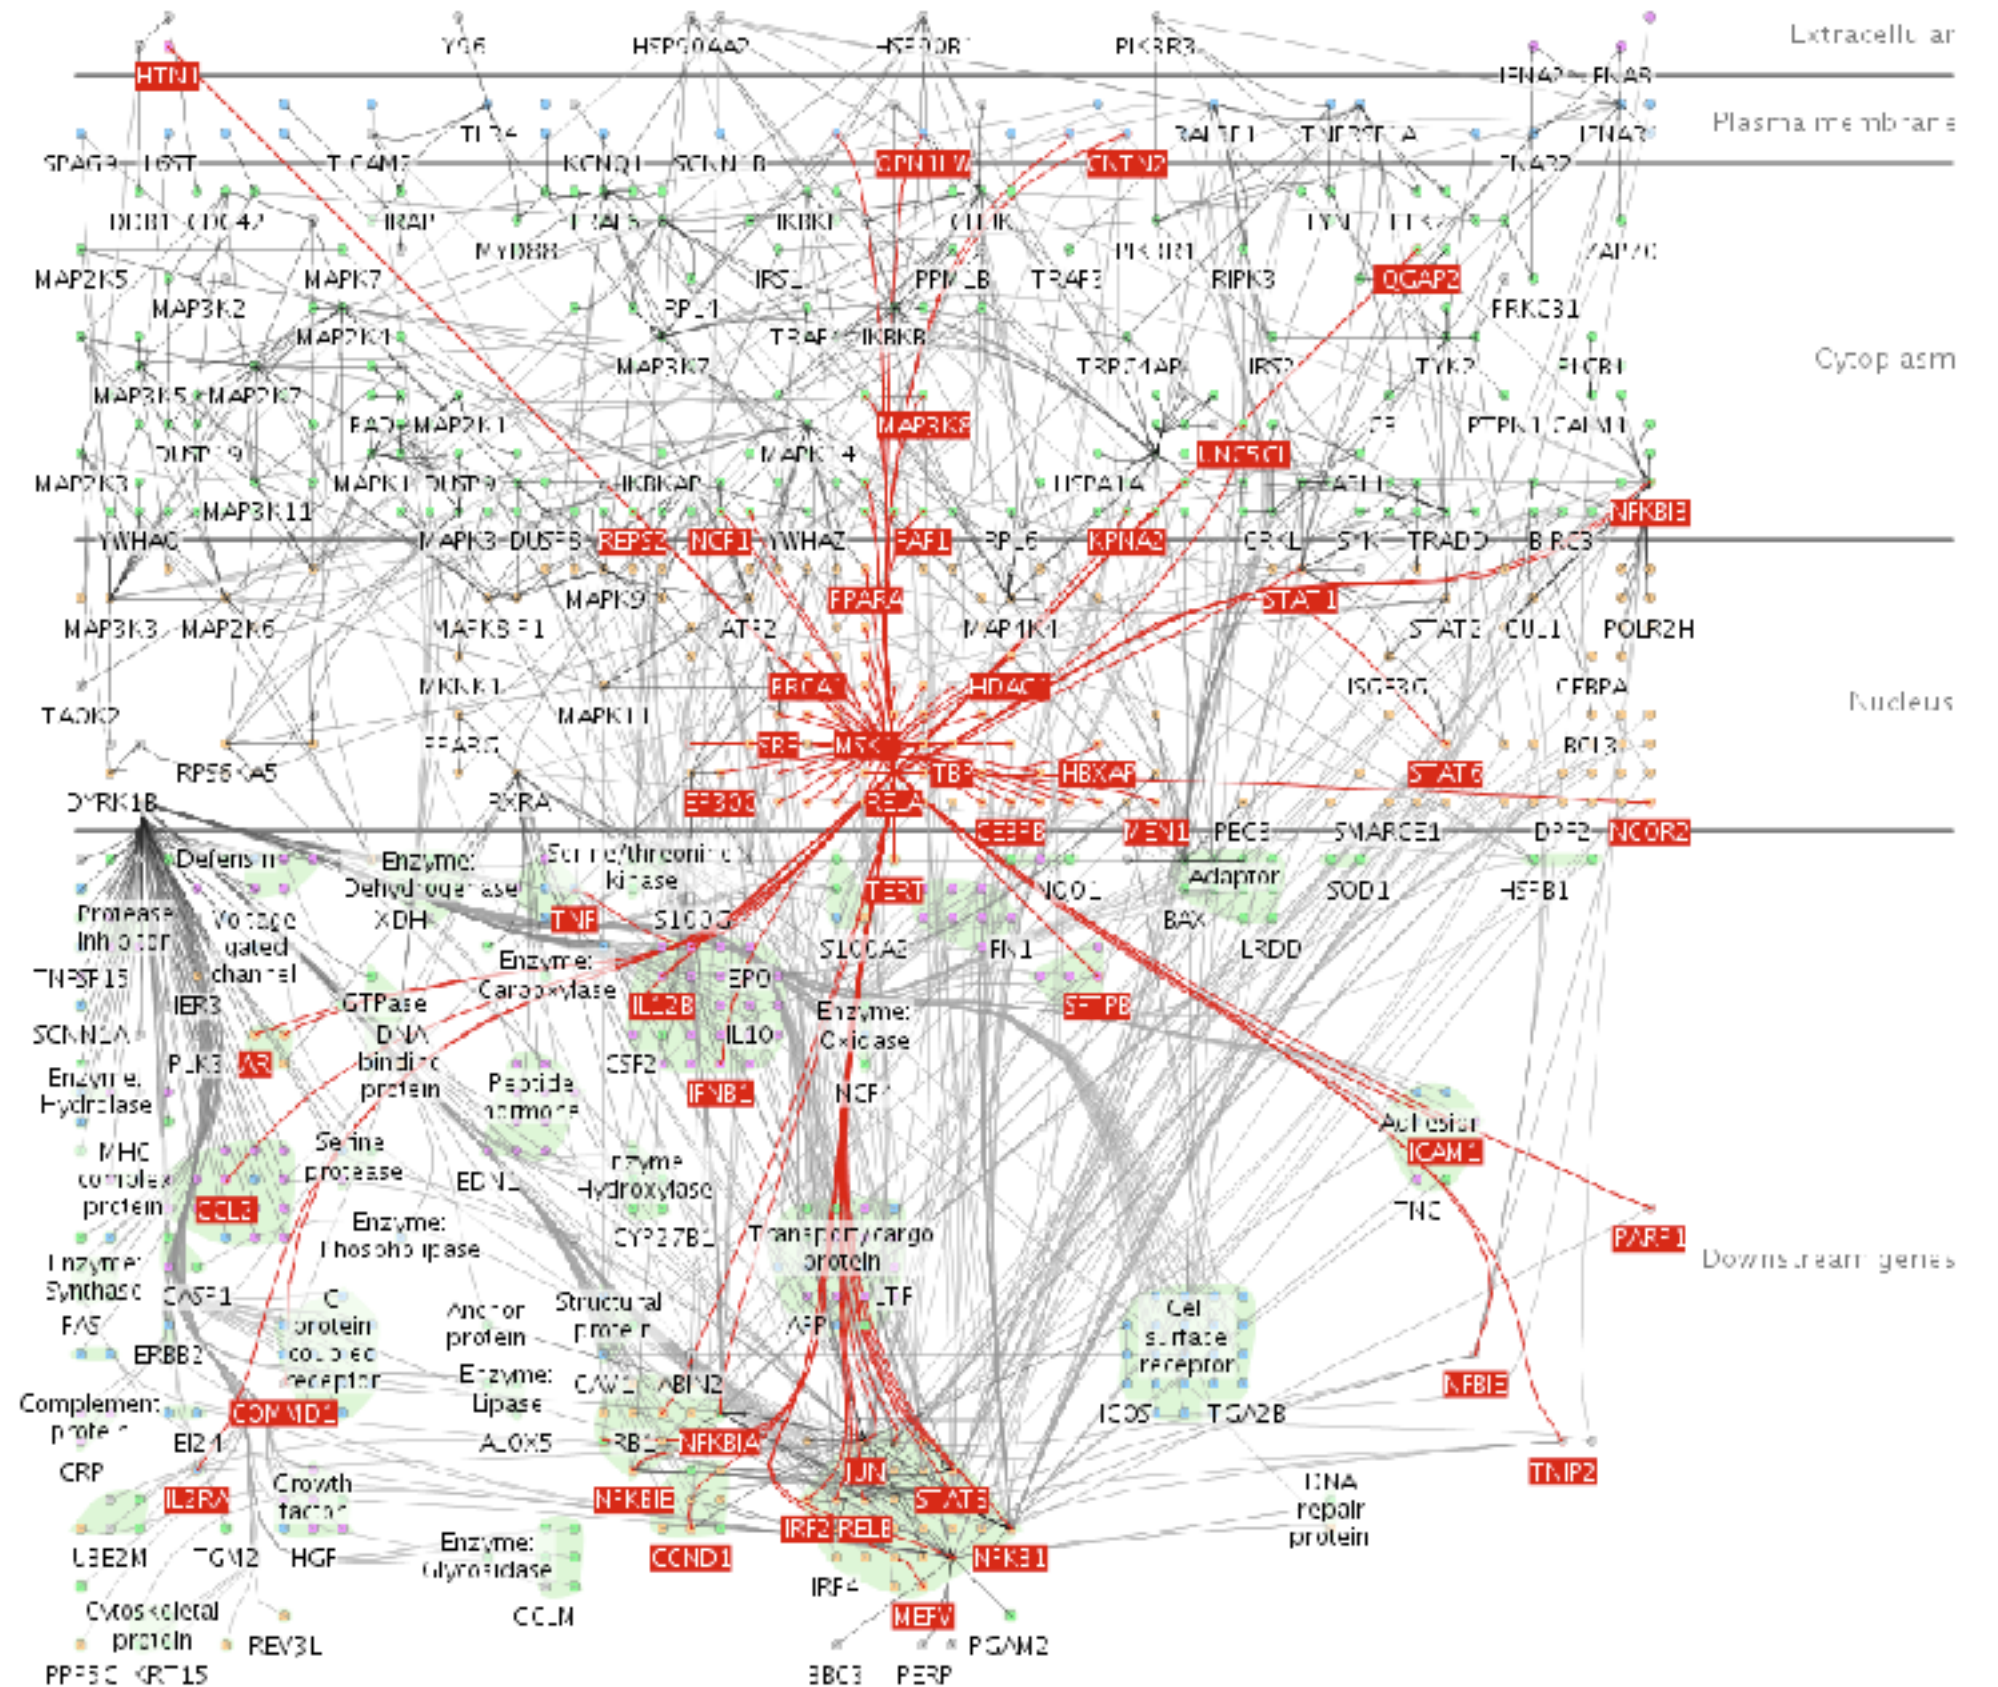

[Graphical Perception of Multiple Time Series. Javed, McDonnell, and Elmqvist. *IEEE Transactions on Visualization and Computer Graphics (Proc. IEEE InfoVis 2010)* 16:6 (2010), 927–934.]

Dynamic visual layering

- interactive, from selection
 - lightweight: click
 - very lightweight: hover
- ex: 1-hop neighbors

System: Cerebral

[Cerebral: a Cytoscape plugin for layout of and interaction with biological networks using subcellular localization annotation. Barsky, Gardy, Hancock, and Munzner. *Bioinformatics* 23:8 (2007), 1040–1042.]

Outline

- **Session 1** 9-10:30am
 - Analysis: What, Why, How
 - Marks and Channels
 - Arrange Tables
 - Arrange Spatial Data
 - Arrange Networks and Trees
- **Session 2** 10:50-12:20pm
 - Map Color and Other Channels
 - Manipulate: Change, Select, Navigate
 - Facet: Juxtapose, Partition, Superimpose
 - Reduce: Filter, Aggregate
 - Embed: Focus+Context

Reduce items and attributes

- reduce/increase: inverses
- filter
 - pro: straightforward and intuitive
 - to understand and compute
 - con: out of sight, out of mind
- aggregation
 - pro: inform about whole set
 - con: difficult to avoid losing signal
- not mutually exclusive
 - combine filter, aggregate
 - combine reduce, change, facet

Reducing Items and Attributes

① Filter

→ Items

→ Attributes

② Aggregate

→ Items

→ Attributes

Reduce

① Filter

② Aggregate

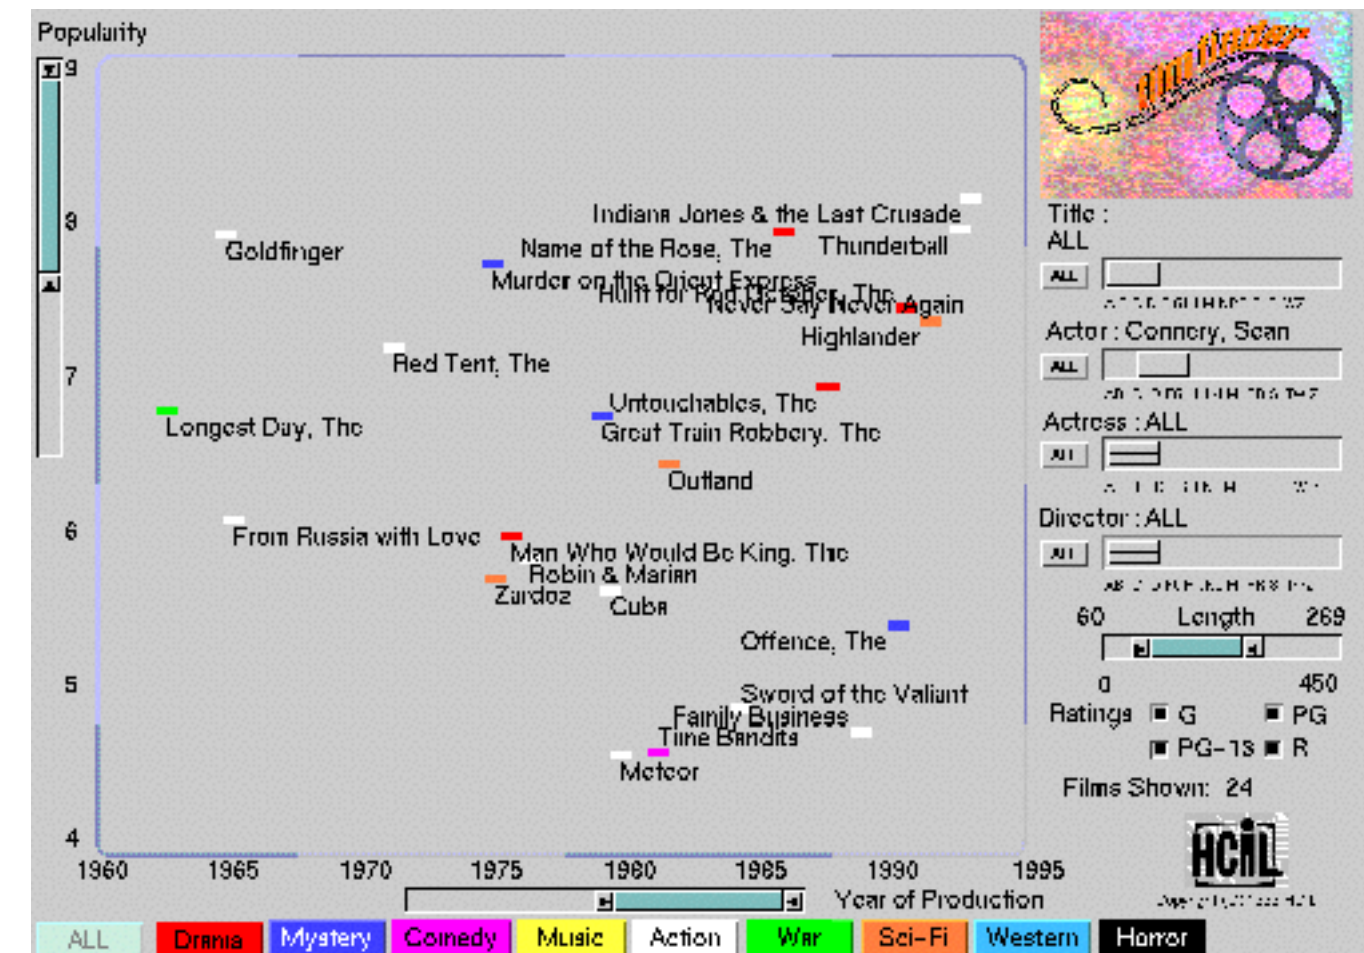

③ Embed

Idiom: dynamic filtering

System: FilmFinder

- item filtering
- browse through tightly coupled interaction
 - alternative to queries that might return far too many or too few

[Visual information seeking: Tight coupling of dynamic query filters with starfield displays. Ahlberg and Shneiderman. Proc. ACM Conf. on Human Factors in Computing Systems (CHI), pp. 313–317, 1994.]

Idiom: **scented widgets**

- augment widgets for filtering to show **information scent**
 - cues to show whether value in drilling down further vs looking elsewhere
- concise, in part of screen normally considered control panel

[Scented Widgets: Improving Navigation Cues with Embedded Visualizations. Willett, Heer, and Agrawala. *IEEE Trans. Visualization and Computer Graphics (Proc. InfoVis 2007)* 13:6 (2007), 1129–1136.]

Idiom: **histogram**

- static item aggregation
- task: find distribution
- data: table
- derived data
 - new table: keys are bins, values are counts
- bin size crucial
 - pattern can change dramatically depending on discretization
 - opportunity for interaction: control bin size on the fly

Idiom: **boxplot**

- static item aggregation
- task: find distribution
- data: table
- derived data
 - 5 quant attribs
 - median: central line
 - lower and upper quartile: boxes
 - lower upper fences: whiskers
 - values beyond which items are outliers
 - outliers beyond fence cutoffs explicitly shown

[40 years of boxplots. Wickham and Stryjewski. 2012. had.co.nz]

Idiom: Hierarchical parallel coordinates

- dynamic item aggregation
- derived data: **hierarchical clustering**
- encoding:
 - cluster band with variable transparency, line at mean, width by min/max values
 - color by proximity in hierarchy

[Hierarchical Parallel Coordinates for Exploration of Large Datasets. Fua, Ward, and Rundensteiner. Proc. IEEE Visualization Conference (Vis '99), pp. 43– 50, 1999.]

Dimensionality reduction

- attribute aggregation
 - derive low-dimensional target space from high-dimensional measured space
 - use when you can't directly measure what you care about
 - true dimensionality of dataset conjectured to be smaller than dimensionality of measurements
 - latent factors, hidden variables

Tumor
Measurement Data

data: 9D measured space

DR

Malignant

Benign

derived data: 2D target space

Idiom: Dimensionality reduction for documents

Task 1

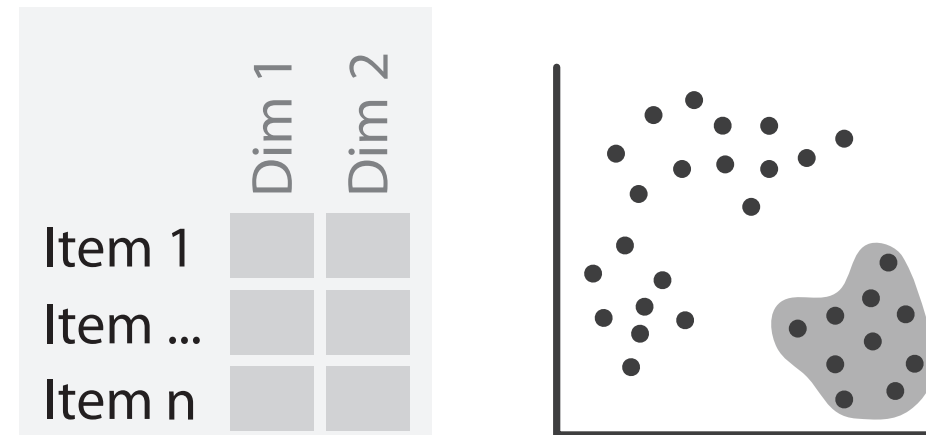

In HD data → **Out** 2D data

What?

Why?

- **In** High-dimensional data
- **Out** 2D data
- Produce
- Derive

Task 2

In 2D data → **Out** Scatterplot Clusters & points

What?

Why?

How?

- **In** 2D data
- **Out** Scatterplot
- **Out** Clusters & points
- Discover
- Explore
- Identify
- Encode
- Navigate
- Select

Task 3

In Scatterplot Clusters & points → **Out** Labels for clusters

What?

Why?

- **In** Scatterplot
- **In** Clusters & points
- **Out** Labels for clusters
- Produce
- Annotate

Outline

- **Session 1** 9-10:30am
 - Analysis: What, Why, How
 - Marks and Channels
 - Arrange Tables
 - Arrange Spatial Data
 - Arrange Networks and Trees
- **Session 2** 10:50am-12:20pm
 - Map Color and Other Channels
 - Manipulate: Change, Select, Navigate
 - Facet: Juxtapose, Partition, Superimpose
 - Reduce: Filter, Aggregate
 - **Embed: Focus+Context**

Embed: Focus+Context

- combine information within single view
- elide
 - selectively filter and aggregate
- superimpose layer
 - local lens
- distort geometry
 - to make room for context

→ Embed

→ Elide Data

→ Superimpose Layer

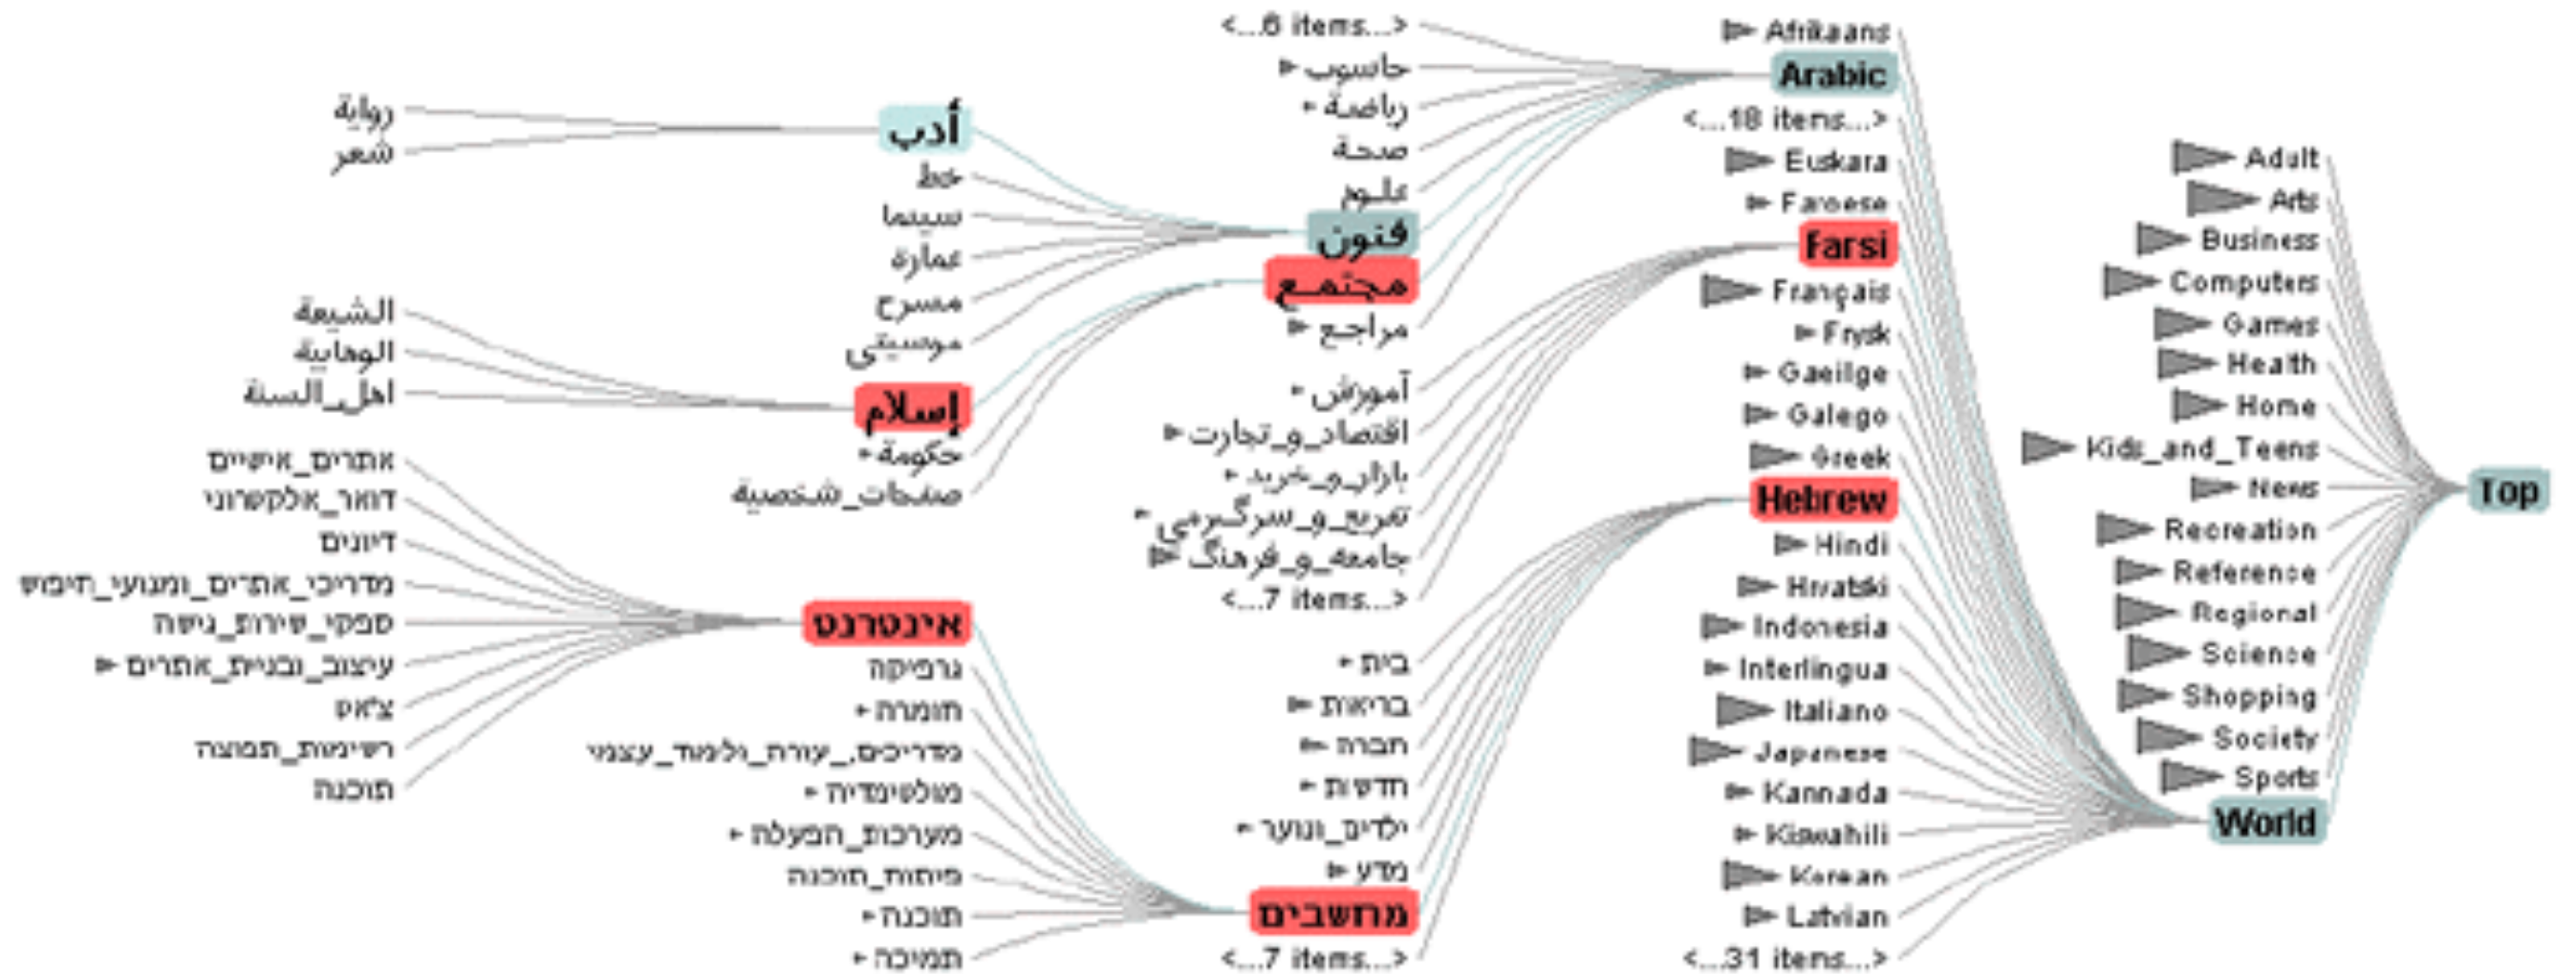

→ Distort Geometry

Idiom: DOI Trees Revisited

- elide
 - some items dynamically filtered out
 - some items dynamically aggregated together
 - some items shown in detail

Idiom: **Fisheye Lens**

- distort geometry
 - shape: radial
 - focus: single extent
 - extent: local
 - metaphor: draggable lens

<http://tulip.labri.fr/TulipDrupal/?q=node/351>
<http://tulip.labri.fr/TulipDrupal/?q=node/371>

Distortion costs and benefits

- benefits
 - combine focus and context information in single view
- costs
 - length comparisons impaired
 - network/tree topology comparisons unaffected: connection, containment
 - effects of distortion unclear if original structure unfamiliar
 - object constancy/tracking maybe impaired

fisheye lens

neighborhood layering

magnifying lens

Bring and Go

Not covered today

- **Rules of Thumb**

- No unjustified 3D

- Power of the plane, dangers of depth
 - Occlusion hides information
 - Perspective distortion loses information
 - Tilted text isn't legible

- No unjustified 2D

- Resolution over immersion

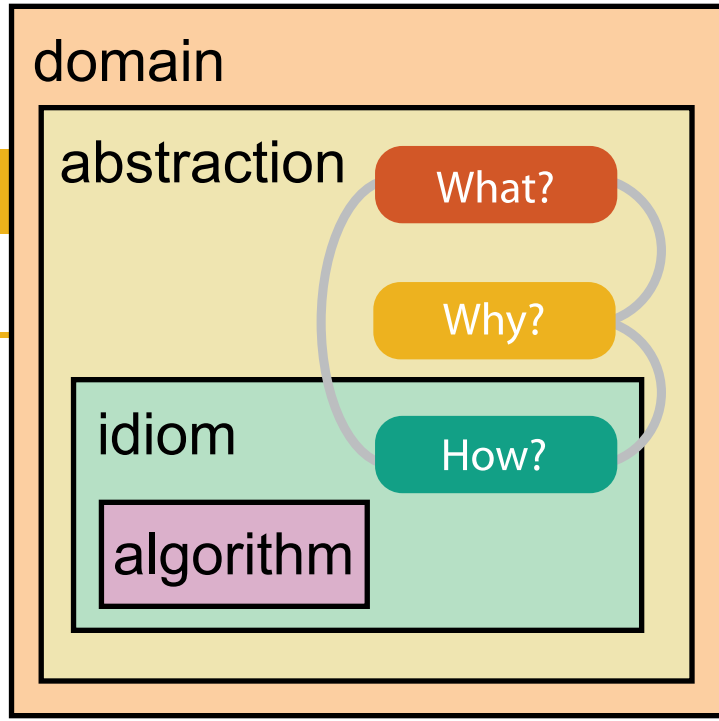

- Overview first, zoom and filter, details on demand

- Function first, form next

What?

Datasets

Attributes

Why?

→ Data Types

→ Items

👉 Actions

🎯 Targets

→ Data and D

- Tables
- Items
- Attributes

→ Analyze

→ Consume

→ Discover

→ Present

→ Enjoy

→ All Data

→ Trends

→ Outliers

→ Features

→ Dataset Typ

→ Tables

→ Produce

→ Annotate

→ Search

	Tar
Location known	••
Location unknown	<••

Encode

→ Arrange

→ Express

→ Separate

→ Order

→ Align

→ Use

→ Map

from **categorical** and **ordered** attributes

→ Color

→ Hue

→ Saturation

→ Luminance

→ Size, Angle, Curvature, ...

→ Shape

→ Motion

Direction, Rate, Frequency, ...

Manipulate

→ Change

→ Select

→ Navigate

Facet

→ Juxtapose

→ Partition

→ Superimpose

Reduce

→ Filter

→ Aggregate

→ Embed

→ Geometr

→ Query

→ Identify
