Visualization (vis) defined & motivated

Computer-based visualization systems provide visual representations of datasets designed to help people carry out tasks more effectively.

Visualization is suitable when there is a need to augment human capabilities rather than replace people with computational decision-making methods.

- human in the loop needs the details
 - doesn't know exactly what questions to ask in advance
 - longterm exploratory analysis
 - presentation of known results
 - stepping stone towards automation: refining, trustbuilding
- intended task, measurable definitions of effectiveness

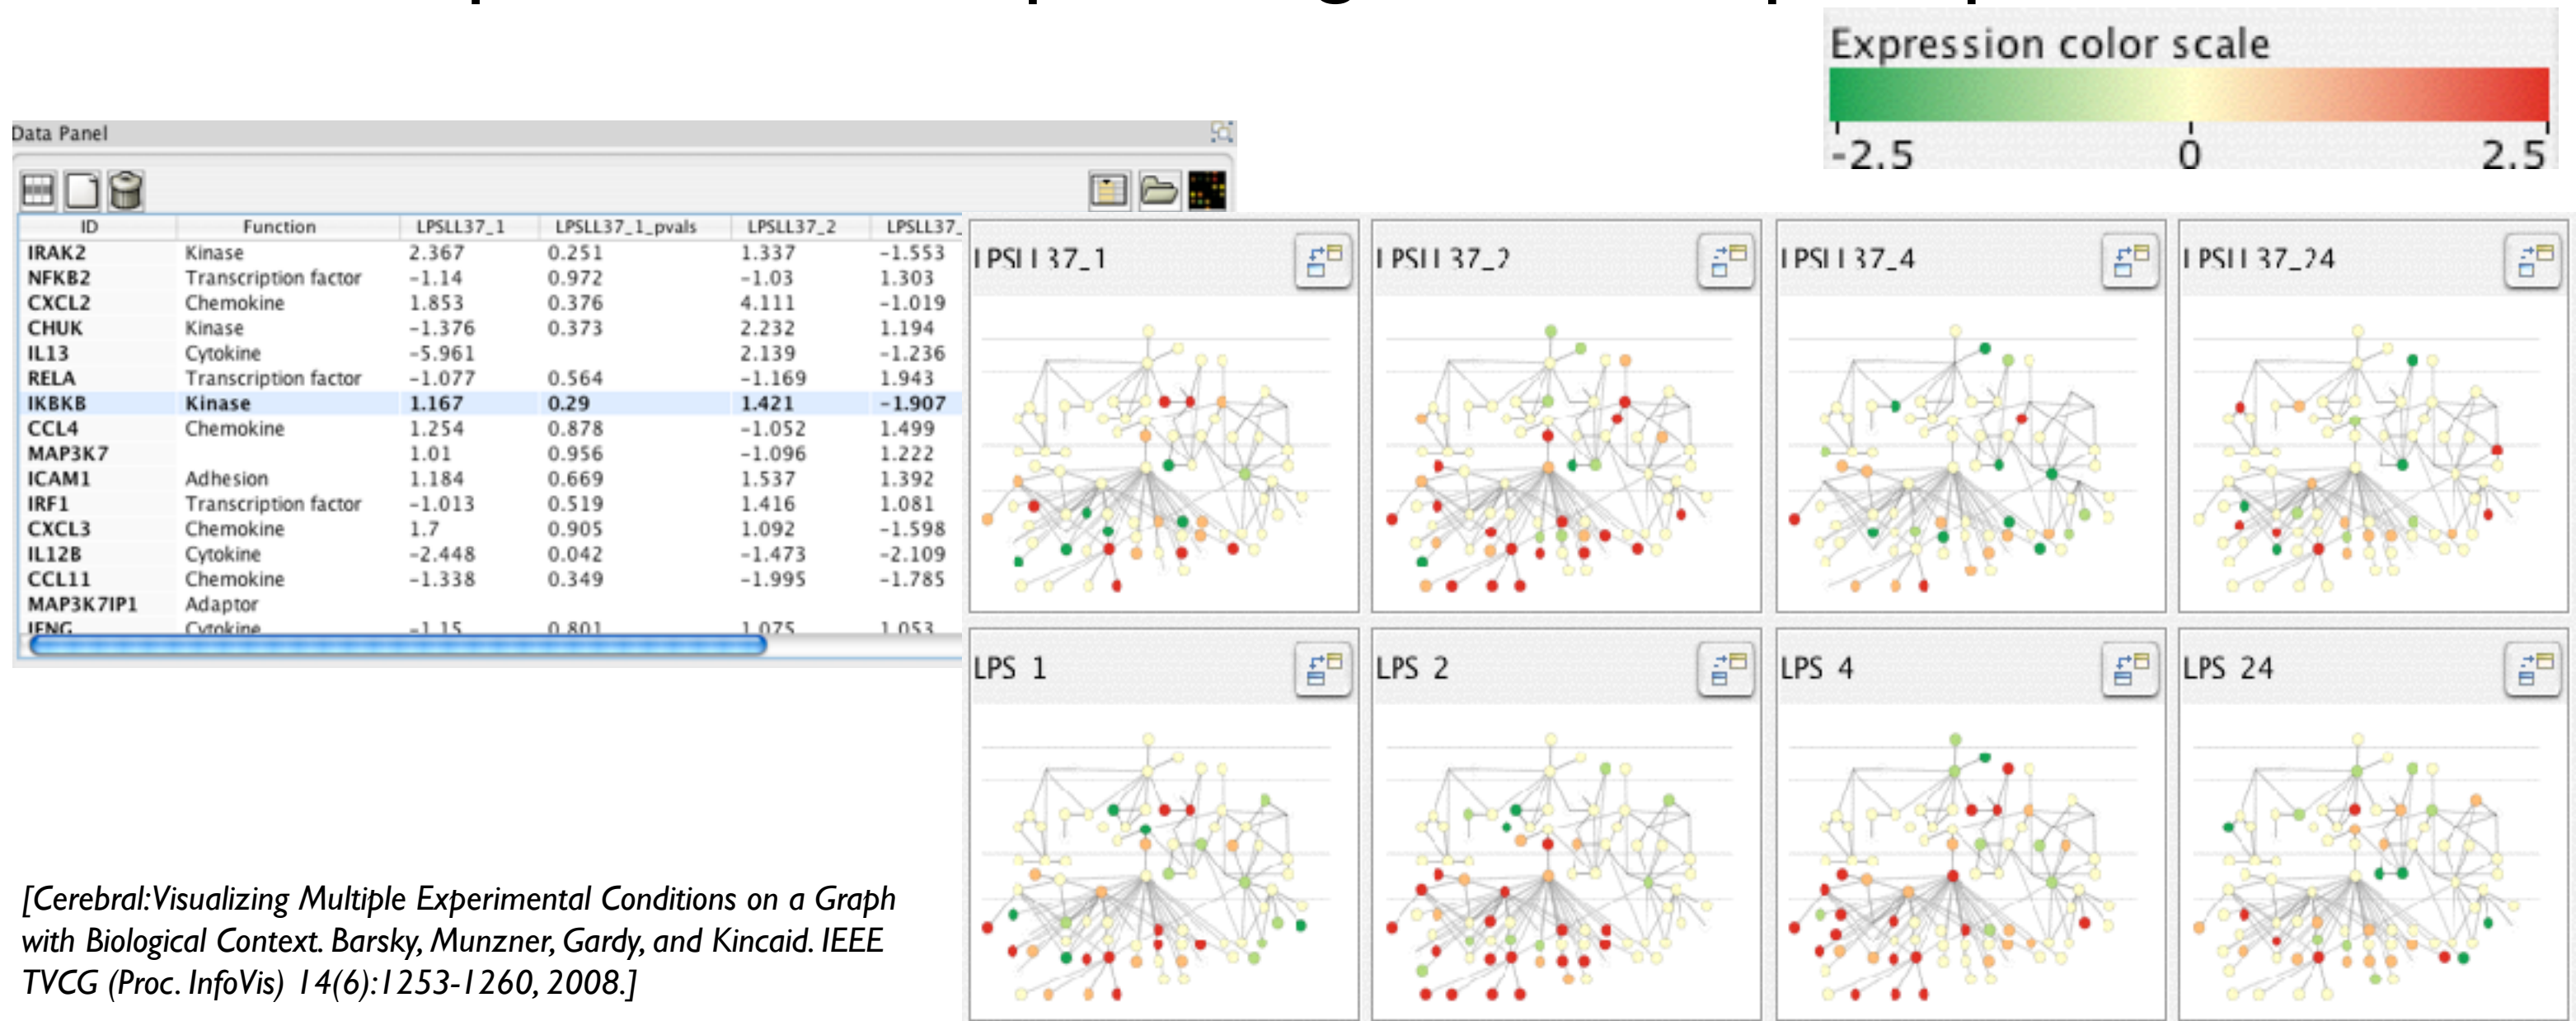

more at:

Visualization Analysis and Design, Chapter 1.
Munzner. *AK Peters Visualization Series*, CRC Press, 2014.

Why use an external representation?

Computer-based visualization systems provide **visual representations** of datasets designed to help people carry out tasks more effectively.

- external representation: replace cognition with perception

[Cerebral: Visualizing Multiple Experimental Conditions on a Graph with Biological Context. Barsky, Munzner, Gardy, and Kincaid. IEEE TVCG (Proc. InfoVis) 14(6):1253-1260, 2008.]

Nested model: Four levels of vis design

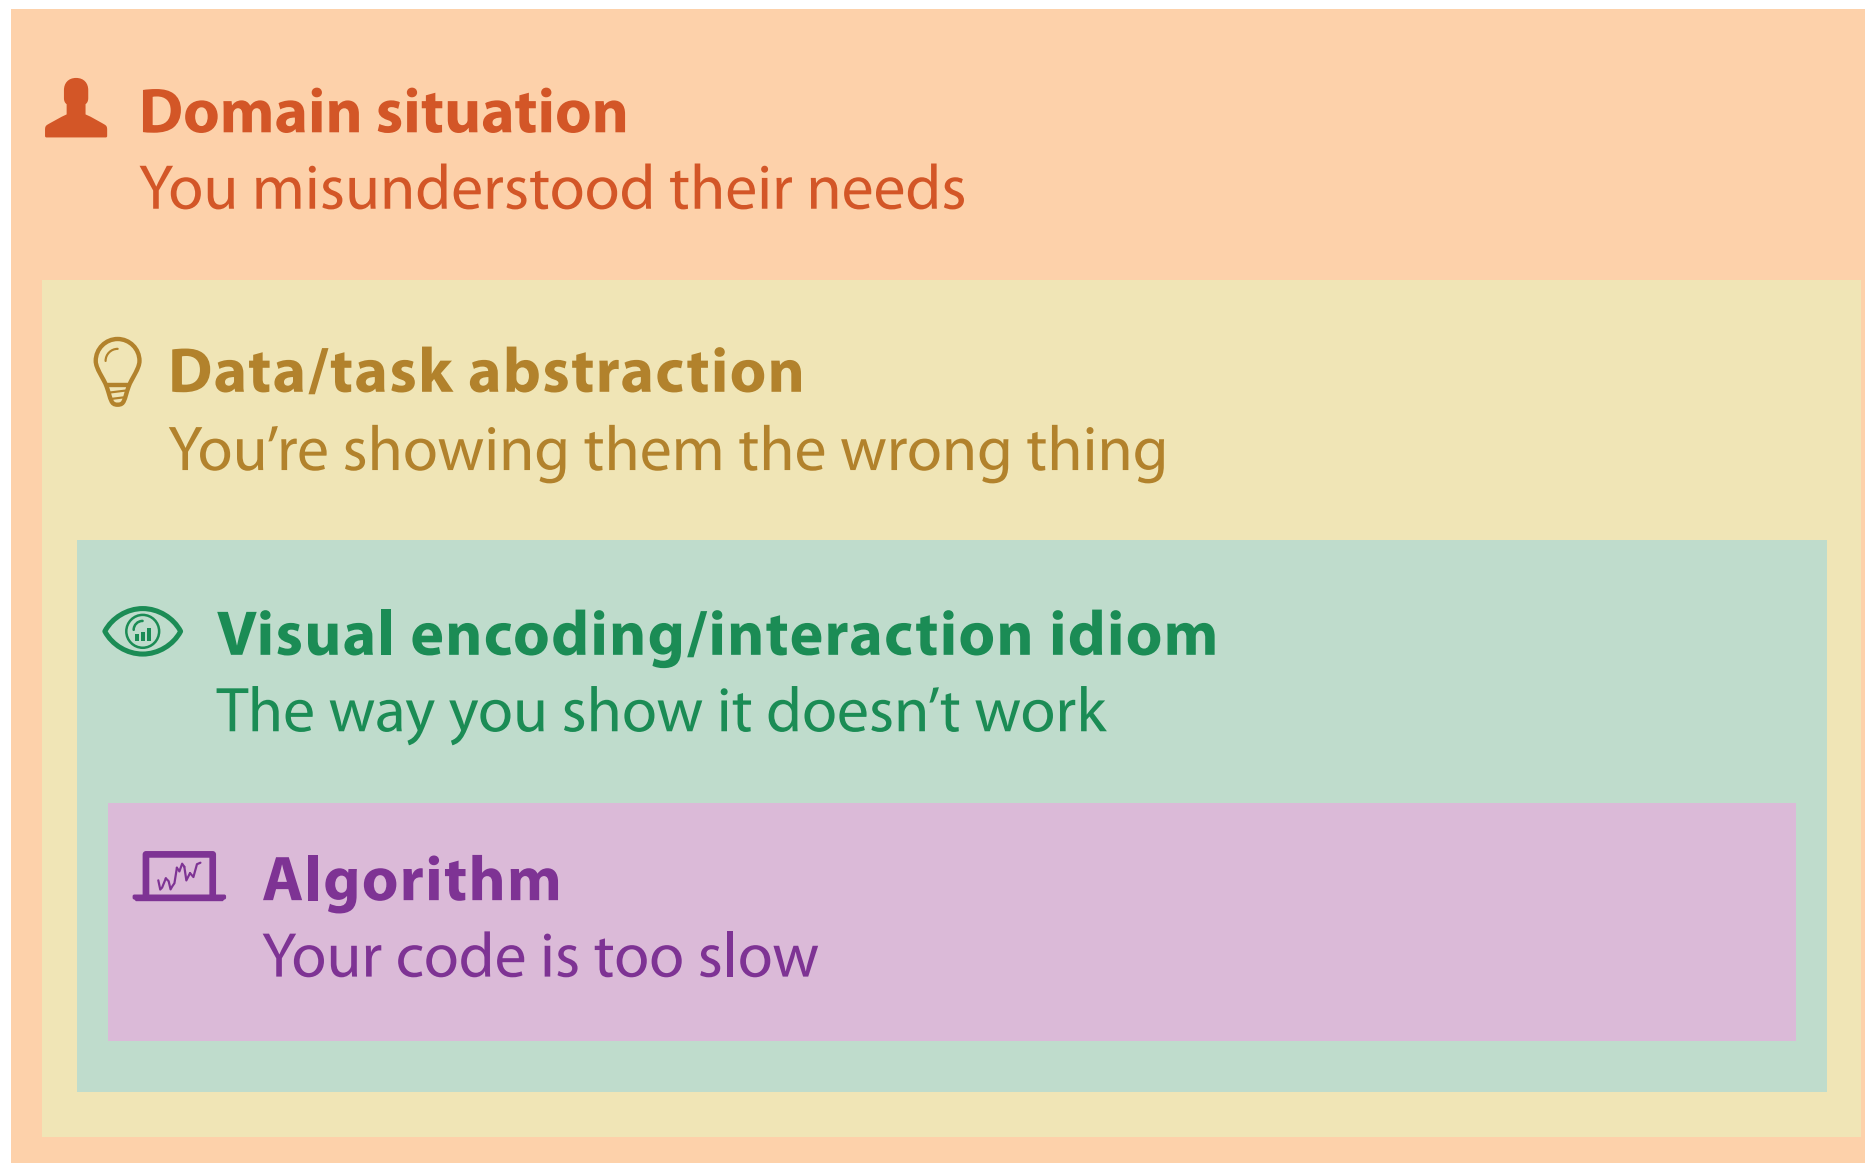

- *domain situation*
 - who are the target users?
- *abstraction*
 - translate from specifics of domain to vocabulary of vis
 - **what** is shown? **data abstraction**
 - **why** is the user looking at it? **task abstraction**
- *idiom*
 - **how** is it shown?
 - **visual encoding idiom**: how to draw
 - **interaction idiom**: how to manipulate
- *algorithm*
 - efficient computation

[A Nested Model of Visualization Design and Validation.
Munzner. *IEEE TVCG* 15(6):921-928, 2009
(*Proc. InfoVis 2009*).]

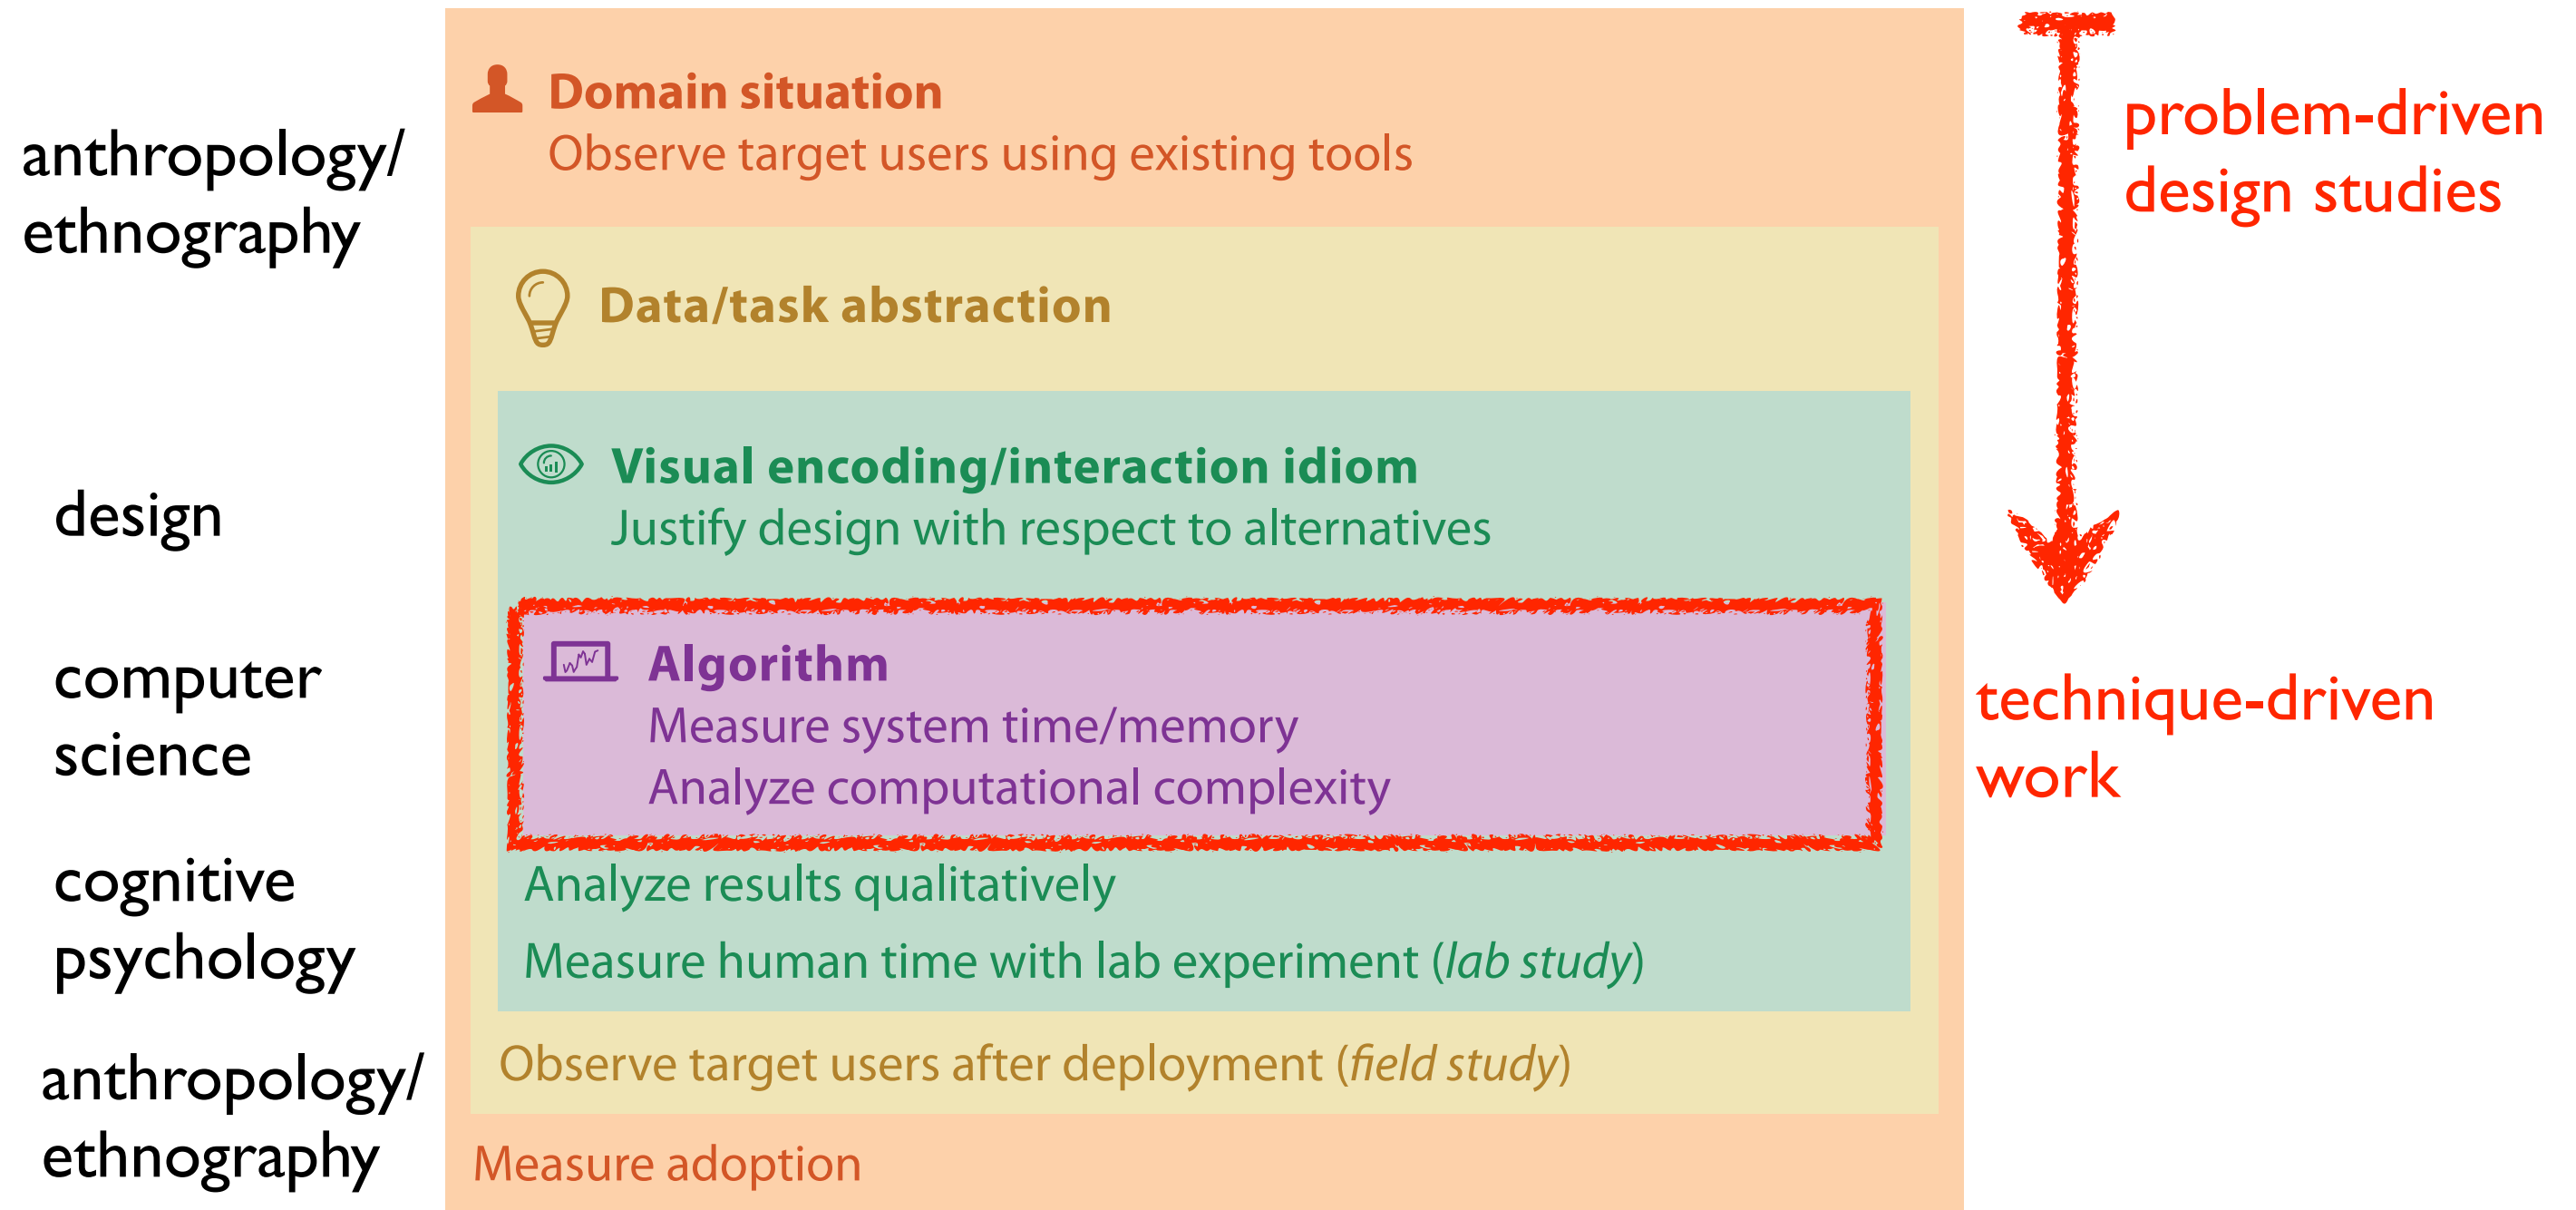

[A Multi-Level Typology of Abstract Visualization Tasks
Brehmer and Munzner. *IEEE TVCG* 19(12):2376-2385,
2013 (*Proc. InfoVis 2013*).]

Threats to validity differ at each level

Evaluate success at each level with methods from different fields

Methodology for Problem-Driven Work

- definitions
- 9-stage framework
- 32 pitfalls and how to avoid them

PF-1	premature advance: jumping forward over stages	general
PF-2	premature start: insufficient knowledge of vis literature	learn
PF-3	premature commitment: collaboration with wrong people	winnow
PF-4	no real data available (yet)	winnow
PF-5	insufficient time available from potential collaborators	winnow
PF-6	no need for visualization: problem can be automated	winnow
PF-7	researcher expertise does not match domain problem	winnow
PF-8	no need for research: engineering vs. research project	winnow
PF-9	no need for change: existing tools are good enough	winnow

What?

Datasets

Attributes

- Data Types
 - Items
 - Attributes
 - Links
 - Positions
 - Grids

- Attribute Types
 - Categorical
 - + ● ■ ▲
 - Ordered
 - Ordinal
 - 👕 👕 👕
 - Quantitative
 - ┆ ┆ ┆

- Ordering Direction
 - Sequential
 -
 - Diverging
 - ←→
 - Cyclic
 - ↻

Three major datatypes

→ Dataset Types

→ Tables

→ Multidimensional Table

→ Networks

→ Trees

→ Spatial

→ Fields (Continuous)

→ Geometry (Spatial)

- visualization vs computer graphics
 - geometry is design decision

Types: Datasets and data

→ Dataset Types

→ Tables

→ Networks

→ Fields (Continuous)

→ Geometry (Spatial)

→ Attribute Types

→ Categorical

→ Ordered

→ Ordinal

→ Quantitative

Actions

Targets

→ Analyze

→ Consume

→ Discover

→ Present

→ Enjoy

→ Produce

→ Annotate

→ Record

→ Derive

→ Search

	Target known	Target unknown
Location known	Lookup	Browse
Location unknown	Locate	Explore

→ Query

→ Identify

→ Compare

→ Summarize

→ All Data

→ Trends

→ Outliers

→ Features

→ Attributes

→ One

→ Distribution

→ Extremes

→ Many

→ Dependency

→ Correlation

→ Similarity

→ Network Data

→ Topology

→ Paths

→ Spatial Data

→ Shape

- {action, target} pairs
 - discover distribution
 - compare trends
 - locate outliers
 - browse topology

Actions: Analyze, Query

- analyze

- consume

- discover vs present

- aka explore vs explain

- enjoy

- aka casual, social

- produce

- annotate, record, derive

- query

- how much data matters?

- one, some, all

- independent choices

→ Analyze

- Consume

- Discover

- Present

- Enjoy

- Produce

- Annotate

- Record

- Derive

→ Query

- Identify

- Compare

- Summarize

Derive: Crucial Design Choice

- don't just draw what you're given!
 - decide what the right thing to show is
 - create it with a series of transformations from the original dataset
 - draw that
- one of the four major strategies for handling complexity

Original Data

$$\text{trade balance} = \text{exports} - \text{imports}$$

Derived Data

Targets

Effectiveness

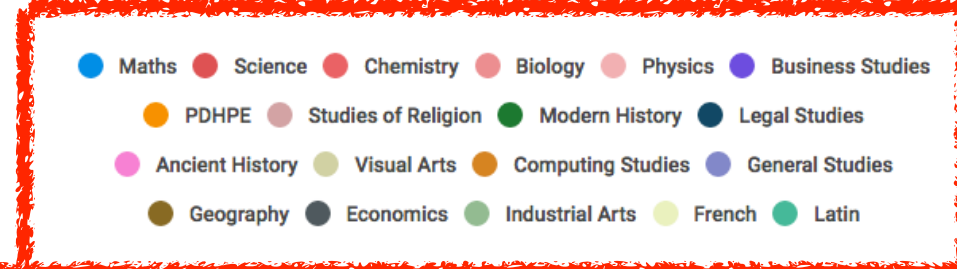

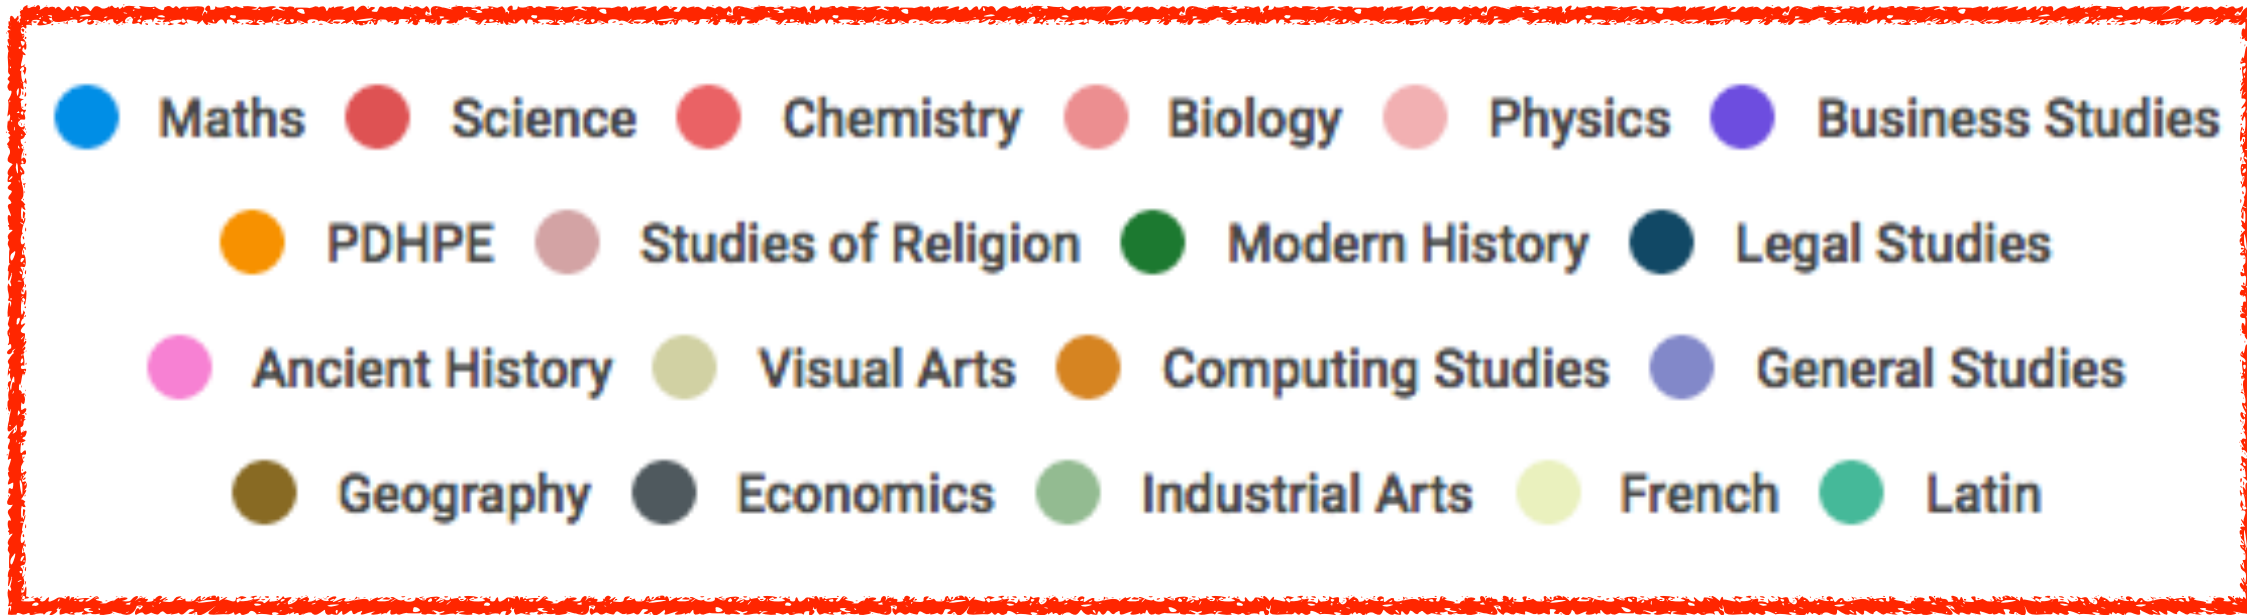

Least

- **expressiveness principle**
 - match channel and data characteristics
- **effectiveness principle**
 - encode most important attributes with highest ranked channels

Challenges of Color

- what is wrong with this picture?

Top 10 HSC subjects (excluding English)

@WTFViz

“visualizations that make no sense”

Categorical vs ordered color

[Seriously Colorful: Advanced Color Principles & Practices. Stone.Tableau Customer Conference 2014.]

Decomposing color

- first rule of color: do not talk about color!
 - color is confusing if treated as monolithic

- decompose into three channels

- ordered can show magnitude

- luminance
- saturation

- categorical can show identity

- hue

- channels have different properties

- what they convey directly to perceptual system

- how much they can convey: how many discriminable bins can we use?

Luminance

- need luminance for edge detection
 - fine-grained detail only visible through luminance contrast
 - legible text requires luminance contrast!
- intrinsic perceptual ordering

Lightness information

Color information

*[Seriously Colorful: Advanced Color Principles & Practices.
Stone.Tableau Customer Conference 2014.]*

Categorical color: limited number of discriminable bins

- human perception built on relative comparisons
 - great if color contiguous
 - surprisingly bad for absolute comparisons
- noncontiguous small regions of color
 - fewer bins than you want
 - rule of thumb: 6-12 bins, including background and highlights

–so what can we do instead?

[Cinteny: flexible analysis and visualization of synteny and genome rearrangements in multiple organisms. Sinha and Meller. BMC Bioinformatics, 8:82, 2007.]

Ordered color: Rainbow is poor default

- problems
 - perceptually unordered
 - perceptually nonlinear
- benefits
 - fine-grained structure visible and nameable

[A Rule-based Tool for Assisting Colormap Selection. Bergman, Rogowitz, and Treinish. Proc. IEEE Visualization (Vis), pp. 118–125, 1995.]

[Why Should Engineers Be Worried About Color? Treinish and Rogowitz 1998. <http://www.research.ibm.com/people/lloyd/color/color.HTM>]

Ordered color: Rainbow is poor default

- problems
 - perceptually unordered
 - perceptually nonlinear
- benefits
 - fine-grained structure visible and nameable
- alternatives
 - large-scale structure: fewer hues

[A Rule-based Tool for Assisting Colormap Selection. Bergman, Rogowitz, and Treinish. Proc. IEEE Visualization (Vis), pp. 118–125, 1995.]

[Why Should Engineers Be Worried About Color? Treinish and Rogowitz 1998. <http://www.research.ibm.com/people/llloyd/color/color.HTM>]

Ordered color: Rainbow is poor default

- problems
 - perceptually unordered
 - perceptually nonlinear
- benefits
 - fine-grained structure visible and nameable
- alternatives
 - large-scale structure: fewer hues
 - fine structure: multiple hues with monotonically increasing luminance [eg viridis R/python]

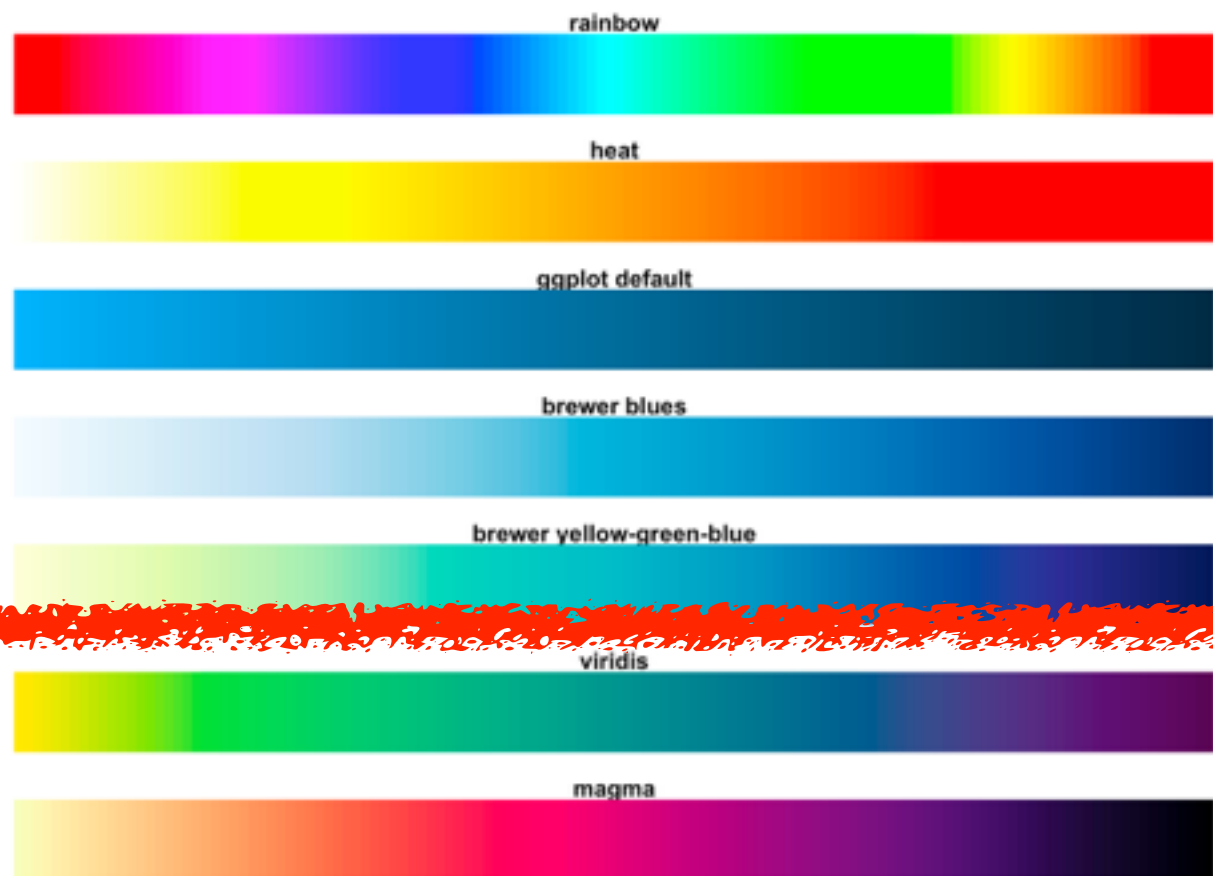

[A Rule-based Tool for Assisting Colormap Selection. Bergman, Rogowitz, and Treinish. Proc. IEEE Visualization (Vis), pp. 118–125, 1995.]

[Why Should Engineers Be Worried About Color? Treinish and Rogowitz 1998. <http://www.research.ibm.com/people/lloyd/color/color.HTM>]

Viridis

- colorful, perceptually uniform, colorblind-safe, monotonically increasing luminance

<https://cran.r-project.org/web/packages/viridis/vignettes/intro-to-viridis.html>

Ordered color: Rainbow is poor default

- problems
 - perceptually unordered
 - perceptually nonlinear
- benefits
 - fine-grained structure visible and nameable
- alternatives
 - large-scale structure: fewer hues
 - fine structure: multiple hues with monotonically increasing luminance [eg viridis R/python]
 - segmented rainbows for binned or categorical

[A Rule-based Tool for Assisting Colormap Selection. Bergman, Rogowitz, and Treinish. Proc. IEEE Visualization (Vis), pp. 118–125, 1995.]

[Why Should Engineers Be Worried About Color? Treinish and Rogowitz 1998. <http://www.research.ibm.com/people/lloyd/color/color.HTM>]

[Transfer Functions in Direct Volume Rendering: Design, Interface, Interaction. Kindlmann. SIGGRAPH 2002 Course Notes]

Visual encoding: 2D vs 3D

- 2D good, 3D better?
 - not so fast...

<http://amberleyromo.com/images/Bookcover/Animal-Farm.png>

Unjustified 3D all too common, in the news and elsewhere

<http://viz.wtf/post/137826497077/eye-popping-3d-triangles>

<http://viz.wtf/post/139002022202/designer-drugs-ht-ducqn>

Depth vs power of the plane

- high-ranked spatial position channels: **planar** spatial position
– not depth!

→ Magnitude Channels: **Ordered** Attributes

Life in 3D?...

- we don't really live in 3D: we **see** in 2.05D
 - acquire more info on image plane quickly from eye movements
 - acquire more info for depth slower, from head/body motion

[adapted from *Visual Thinking for Design*. Ware. Morgan Kaufmann 2010.]

We can only see the outside shell of the world

Occlusion hides information

- occlusion
- interaction complexity

[Distortion Viewing Techniques for 3D Data. Carpendale et al. InfoVis 1996.]

Perspective distortion loses information

- perspective distortion
 - interferes with all size channel encodings
 - power of the plane is lost!

*[Visualizing the Results of Multimedia Web Search Engines.
Mukherjea, Hirata, and Hara. InfoVis 96]*

3D vs 2D bar charts

- 3D bars never a good idea!

Graph Design I.Q. Test

Question 7: Which graph makes it easier to determine R&D's travel expense?

2006 Expenses by Department

3-D Bar Graph (left)

2-D Bar Graphs (below)

2006 Expenses by Department in Millions of USD

No unjustified 3D example: Time-series data

- extruded curves: detailed comparisons impossible

[Cluster and Calendar based Visualization of Time Series Data. van Wijk and van Selow, Proc. InfoVis 99.]

No unjustified 3D example: Transform for new data abstraction

- derived data: cluster hierarchy
- juxtapose multiple views: calendar, superimposed 2D curves

[Cluster and Calendar based Visualization of Time Series Data. van Wijk and van Selow, Proc. InfoVis 99.]

Justified 3D: shape perception

- benefits outweigh costs when task is shape perception for 3D spatial data
 - interactive navigation supports synthesis across many viewpoints

[Image-Based Streamline Generation and Rendering. Li and Shen. IEEE Trans. Visualization and Computer Graphics (TVCG) 13:3 (2007), 630–640.]

No unjustified 3D

- 3D legitimate for true 3D spatial data
- 3D needs very careful justification **for abstract data**
 - enthusiasm in 1990s, but now skepticism
 - be especially careful with 3D for point clouds or networks

[WEBPATH-a three dimensional Web history. Frecon and Smith. Proc. InfoVis 1999]

Justified 3D: Economic growth curve

A 3-D View of a Chart That Predicts The Economic Future: The Yield Curve

By GREGOR AISCH and AMANDA COX MARCH 18, 2015

● ○ ○ ○ ○ ○ ○ ○ ○ ○ ○ ○

Back

Next

Yield curve 101

The yield curve shows how much it costs the federal government to borrow money for a given amount of time, revealing the relationship between long- and short-term interest rates.

It is, inherently, a forecast for what the economy holds in the future — how much inflation there will be, for example, and how healthy growth will be over the years ahead — all embodied in the price of money today, tomorrow and many years from now.

Four strategies to handle complexity

→ *Derive*

- derive new data to show within view
- change view over time
- facet across multiple views
- reduce items/attributes within single view
