Matches, Mismatches, and Methods: Multiple-View Workflows for Energy Portfolio Analysis

WHY THIS WORK MATTERS...

...contributions for an InfoVis research audience:

Data and task abstractions: identifying matches (and mismatches). Supporting task sequences.

Domain convention, familiarity, and trust.

Methodological guidance for visualization design studies.

DESIGN METHODOLOGY

DESIGN ACTIVITIES

- i. analyzing the work domain
- ii. identifying data and task abstractions
- iii. visual encoding sandbox prototyping
- iv. eliciting feedback on visual encoding designs
- v. prototyping workflows
- vi. production development by collaborator

DESIGN ACTIVITIES

- i. analyzing the work domain
- ii. identifying data and task abstractions
- iii. visual encoding sandbox prototyping
- iv. eliciting feedback on visual encoding designs
- v. prototyping workflows
- vi. production development by collaborator

WORK DOMAIN ANALYSIS

Normative, descriptive, formative perspectives. Workers' use of tools, their work context, workarounds.

Hierarchical and sequential task analysis.

DESIGN DOCUMENTATION

Date: 07.29

Who: [redacted],
Energy Manager,

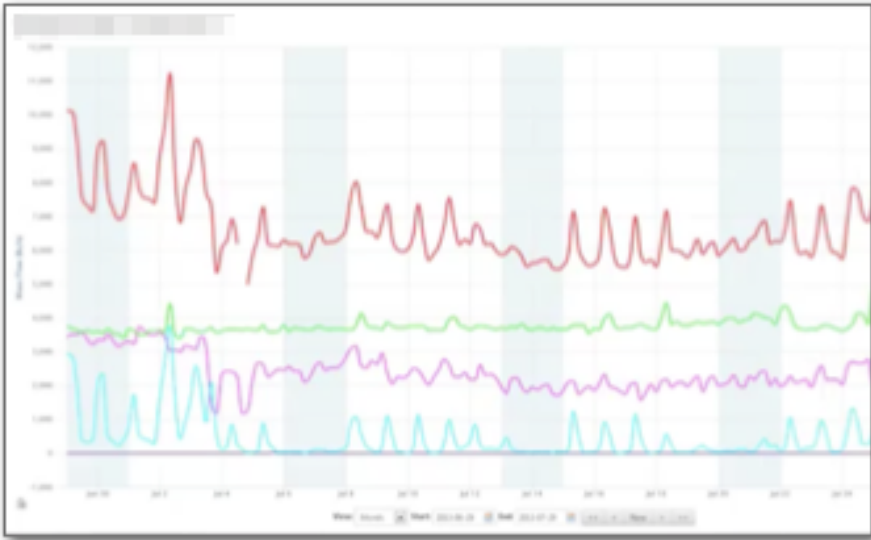

Where: (Skype)

Supplemental: screen
capture recording,
audio

Role: One of two energy managers at [redacted]; [redacted] focuses on planning, analysis, and reporting, focus on steam usage for 50 meters (out of 400, 350 others not in EM)

EM Usage: day-to-day monitoring of daily and hourly consumption patterns for 4 [redacted] campus zones.

Portfolio: 2 campuses: [redacted] (70 buildings), [redacted] (21 buildings); downtown campus divided into 4 zones ([redacted], [redacted], [redacted], [redacted]), (12-20 buildings per zone), but different energy consumption patterns: 2 north zones are engineering and medicine, consume more, more erratic

If an anomaly is spotted in a zone's consumption, [redacted] uses point edit function to determine which buildings comprise the zone, then he'll check management charts for each building individually; previously, he examined all buildings individually

18

Date: 10.24

Who: [redacted]
Energy Specialist,

Where: meeting room +
[redacted]'s laptop @ [redacted] (with [redacted])

Supplemental: [redacted] notes,
email exchanges b/w [redacted]
and [redacted] mockups by [redacted]
Program docs: Intro and
SOP

Current approach (macro): in Excel, organizes energy intensity data for all 130 schools, performs ranking with custom macros.

- Hasn't compared energy intensity rankings to performance ranking in EM home tab; unsure about colours

Current approach (micro): For micro-level analysis of interval data from EM, custom colour scheme for tracking consumption of three time intervals of interest (school hours, after-school hours, night): difficult to spot anomalies here.

- **Weather normalization:** side-by-side comparison of normalized vs. non-normalized consumption

DATA ABSTRACTION

BUILDING PORTFOLIOS

Term	Abstraction	Example
<i>Building metadata</i>		
Building ID	unique categorical	#123
Building area	quantitative	450 m ²
Building age	quantitative	20 years
# occupants	quantitative	50 people
Location	spatial	49.26° N, 123.25° W
Tag	categorical	“ <i>restaurant</i> ”

MULTIPLE TIME SERIES / BUILDING

Term	Abstraction	Example
<i>Temporal data for each building</i>		
Energy demand	quantitative	200 kW
Outdoor temperature	quantitative	18° C
Open / closed	categorical	Open Mon–Fri, 08-18h

DERIVED DATA

Term	Abstraction	Example
<i>Derived temporal data for each building</i>		
Consumption	quantitative	800 kWh
Energy intensity	normalized quantitative	1.78 kWh / m ²
Weather-independent performance	normalized quantitative	50 kWh / HDD
Predicted perform.	quantitative	190 kW
% Savings	normalized quantitative	40%
Rank	ordinal	1st, 2nd, 3rd

DOMAIN CONVENTION

TASK ABSTRACTION

PORTFOLIO ENERGY ANALYSIS

Goals:

- oversee energy behaviour of portfolios of buildings
- reduce energy costs / conserve energy
- ensure comfort and safety of building occupants

Activities:

- assess behaviour following energy conservation measures
- determine which building(s) require these measures
- find (and diagnose) anomalous energy behaviour

TASK ABSTRACTION

2376

IEEE TRANSACTIONS ON VISUALIZATION AND COMPUTER GRAPHICS, VOL. 19, NO. 12, DECEMBER 2013

A Multi-Level Typology of Abstract Visualization Tasks

Matthew Brehmer and Tamara Munzner, *Member, IEEE*

Abstract—The considerable previous work characterizing visualization usage has focused on low-level tasks or interactions and high-level tasks, leaving a gap between them that is not addressed. This gap leads to a lack of distinction between the ends and means of a task, limiting the potential for rigorous analysis. We contribute a multi-level typology of visualization tasks to address this gap, distinguishing *why* and *how* a visualization task is performed, as well as *what* the task inputs and outputs are. Our typology allows complex tasks to be expressed as sequences of interdependent simpler tasks, resulting in concise and flexible descriptions for tasks of varying complexity and scope. It provides abstract rather than domain-specific descriptions of tasks, so that useful comparisons can be made between visualization systems targeted at different application domains. This descriptive power supports a level of analysis required for the generation of new designs, by guiding the translation of domain-specific problems into abstract tasks, and for the qualitative evaluation of visualization usage. We demonstrate the benefits of our approach in a detailed case study, comparing task descriptions from our typology to those derived from related work. We also discuss the similarities and differences between our typology and over two dozen extant classification systems and theoretical frameworks from the literatures of visualization, human-computer interaction, information retrieval, communications, and cartography.

Index Terms—Typology, visualization models, task and requirements analysis, qualitative evaluation

TASK 1: OVERVIEW

Domain Activities	Scope	Abstraction	Example Question
<p>determine which building(s) require energy conservation measures</p> <p>find anomalous energy behaviour</p>	<p>The entire portfolio of buildings</p> <p>coarser time periods</p>	<p><i>discover</i> trends, outliers</p> <p><i>lookup and summarize</i> distributions, extremes, similarities</p>	<p><i>“How did my building portfolio perform this past year?”</i></p>

TASK 2: DRILL DOWN

Domain Activities	Scope	Abstraction	Example Question
assess behaviour following energy conservation measures find and diagnose anomalous energy behaviour	Groups within the portfolio of buildings finer time periods	<i>discover, locate, and compare trends, outliers, features</i>	<i>“Are my restaurants in Seattle performing better this September than they did last September?”</i>

TASK 3: ROLL UP

Domain Activities	Scope	Abstraction	Example Question
find and diagnose anomalous energy behaviour	Groups within the portfolio of buildings finer time periods	<i>discover, locate, and identify</i> trends, outliers, features, dependencies	<i>“what proportion of a university’s energy consumption is consumed by its computer science building over time?”</i>

Task Name	Domain Activities	Abstraction	Example Question
Overview	determine which building(s) require energy conservation measures	<i>discover</i> trends, outliers	<i>“How did my building portfolio perform this past year?”</i>
	find anomalous energy behaviour	<i>lookup</i> and <i>summarize</i> distributions, extremes, similarities	
Drill Down	assess behaviour following energy conservation measures	<i>discover, locate, and compare</i> trends, outliers, features	<i>“Are my restaurants in Vancouver performing better this January than they did last January?”</i>
	find and diagnose anomalous energy behaviour		
Roll Up	find and diagnose anomalous energy behaviour	<i>discover, locate, and identify</i> trends, outliers, features, dependencies	<i>“what proportion of a university’s energy consumption is consumed by its computer science building over time?”</i>

DESIGN ACTIVITIES

Energy Manager

ENERGY MANAGER

PERFORMANCE RANKING					
Export Table					
% SAVINGS	NAME	RESOURCE	SAVINGS	CONSUMPTION	CONSUMPTION PER AREA
1.3%	Westpoint Tower	⚡	+18,040 kWh	1,397 MWh	150.3 kWh/m ²
6.0%	Restaurant Building	🔥	+118,600 kWh	1,838 MWh	1,487 kWh/m ²
7.2%	Airport Research Park	⚡	+1,109 MWh	14,520 MWh	971.1 kWh/m ²
37.2%	Westpoint Tower	💧	+2,233 MWh	3,791 MWh	408.1 kWh/m ²
49.0%	Airport Research Park	🔥	+4,764 MWh	4,988 MWh	333.5 kWh/m ²

Task Name

Overview

Drill Down

Roll Up

Task sequences not supported!

ANALYSIS OF ENERGY MANAGER

Limited **filtering**, no filtering items by shared attributes
“show only restaurants”

Limited **aggregation**, no aggregating items by shared attributes
“all restaurants in Seattle vs. all restaurants in Vancouver”

No **faceting** (juxtaposed views, small multiples)

ANALYSIS OF ENERGY MANAGER

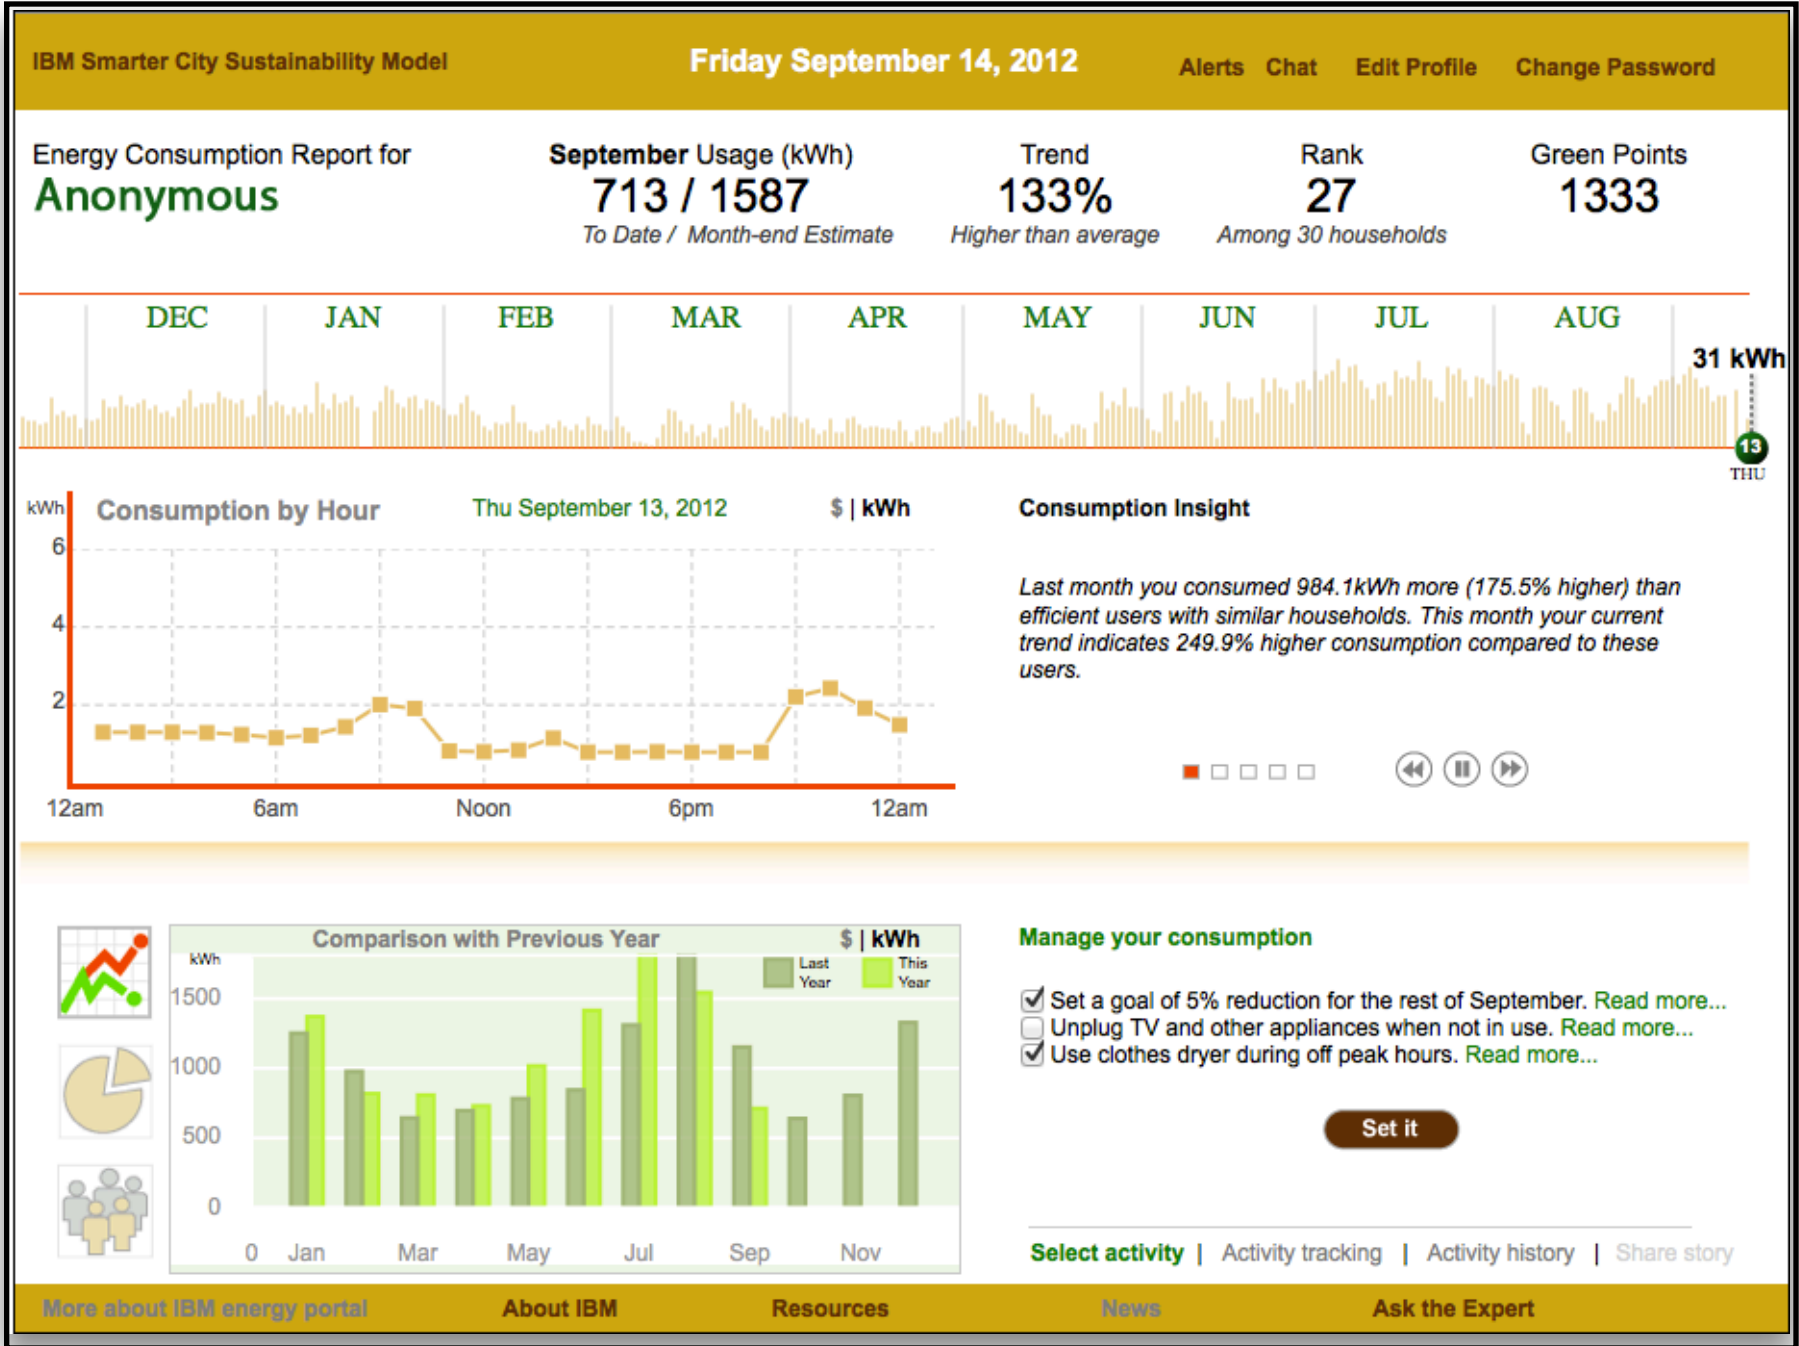

Data routinely exported and imported into Excel.

Little **trust** in predicted derived values based on statistical models. A preference for comparing against historical data.

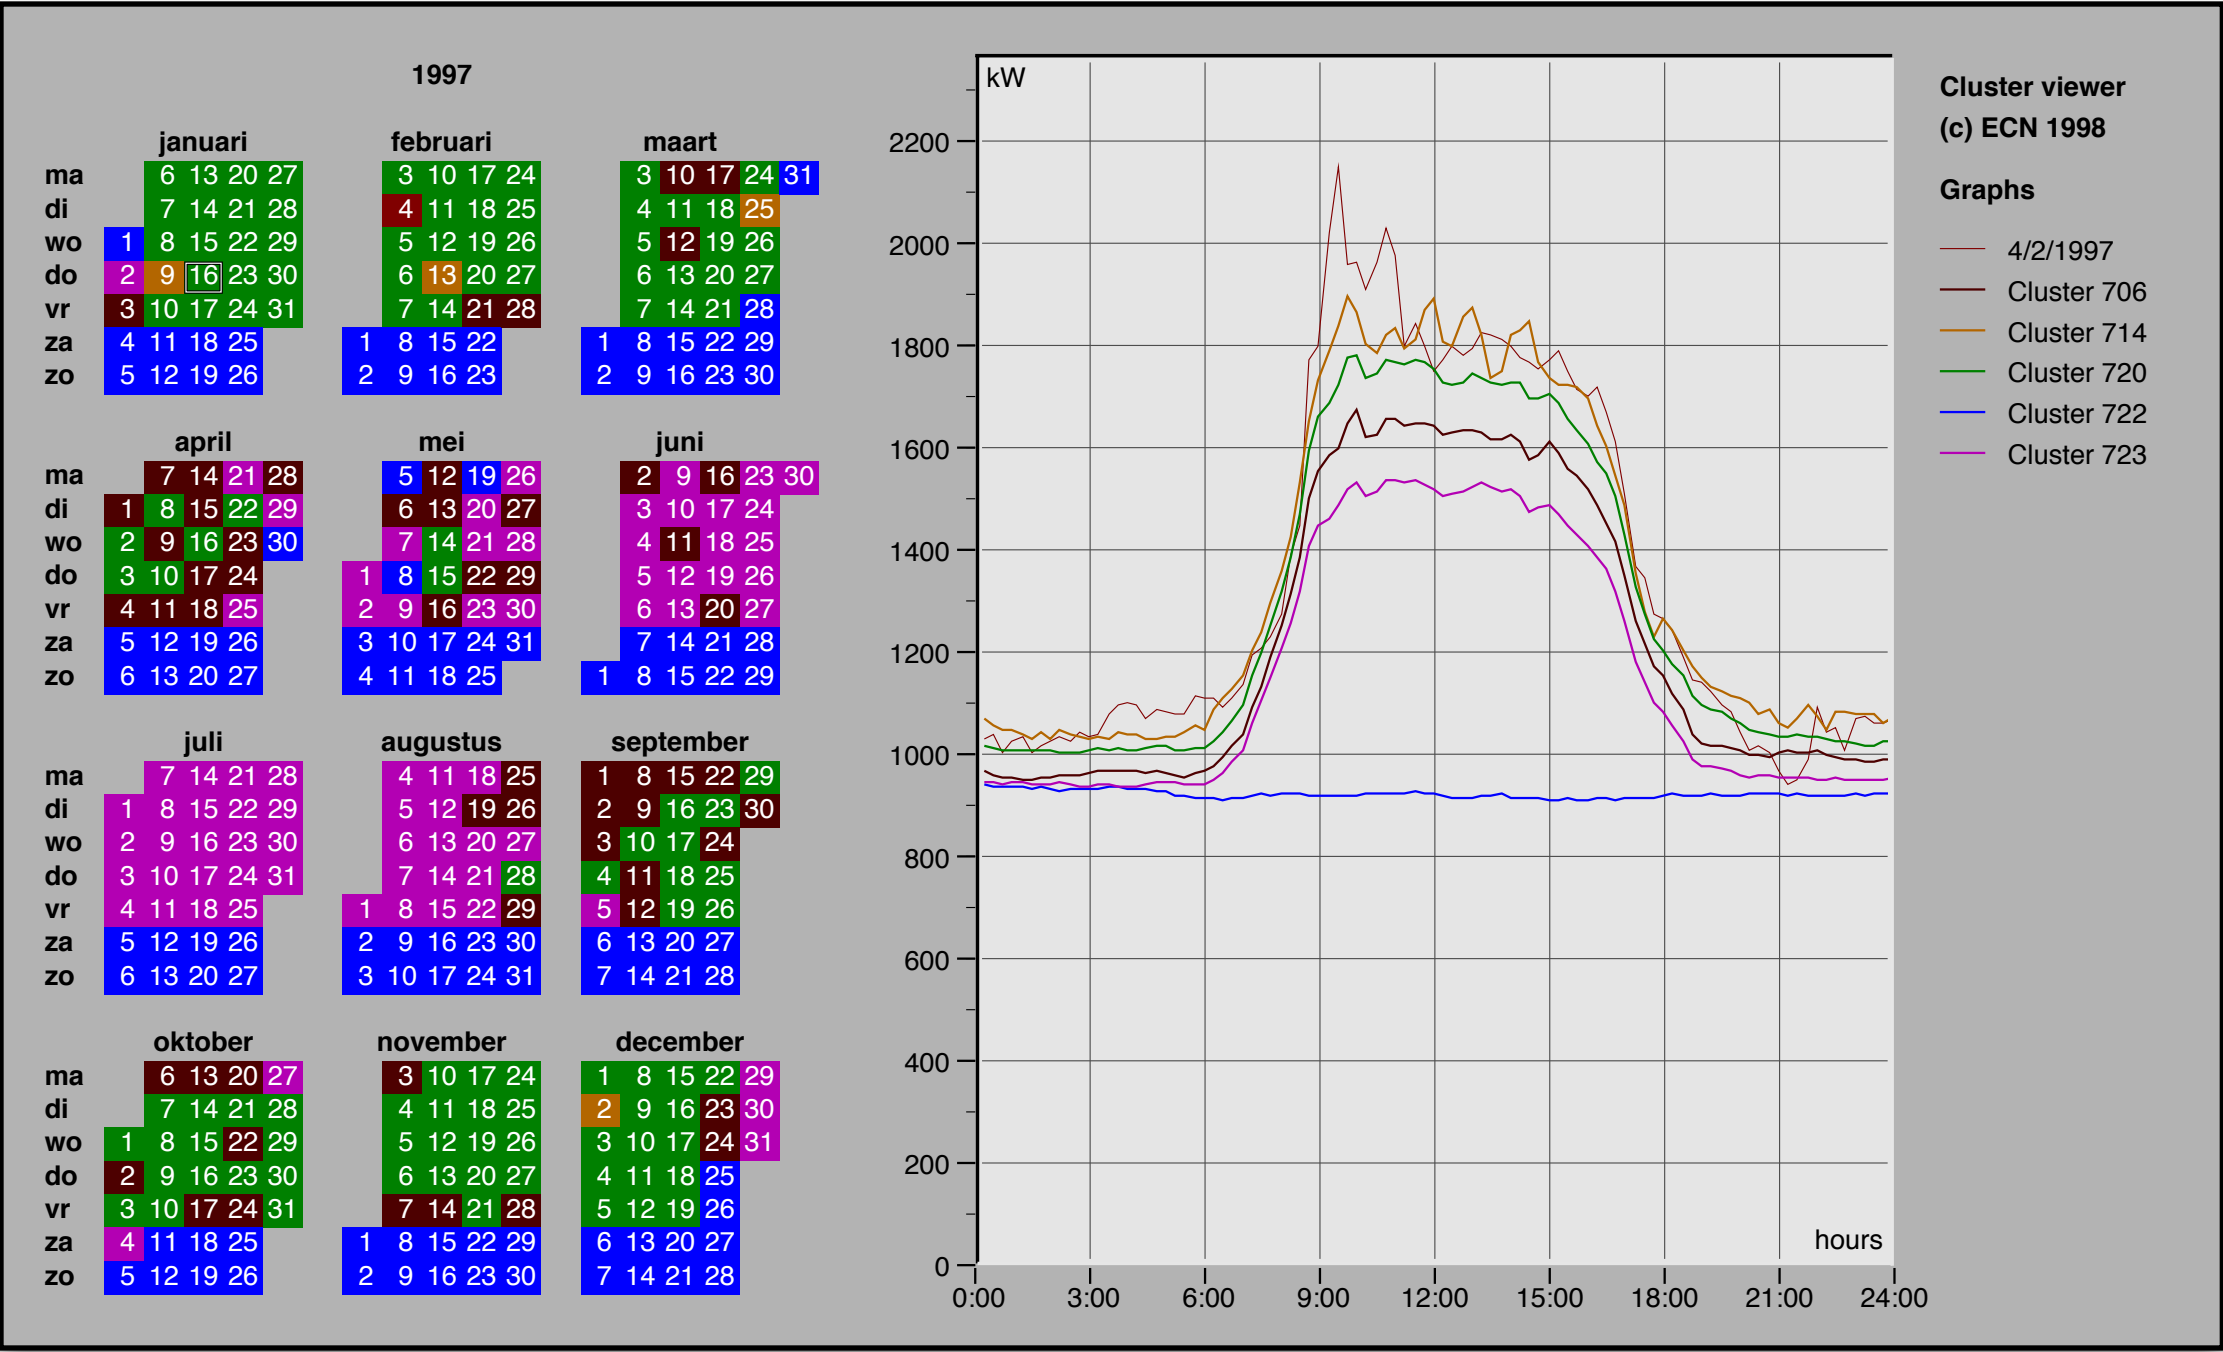

Aggregate derived values (sums, averages) too coarse (loss of detail, lack of **trust**).

UTILICO

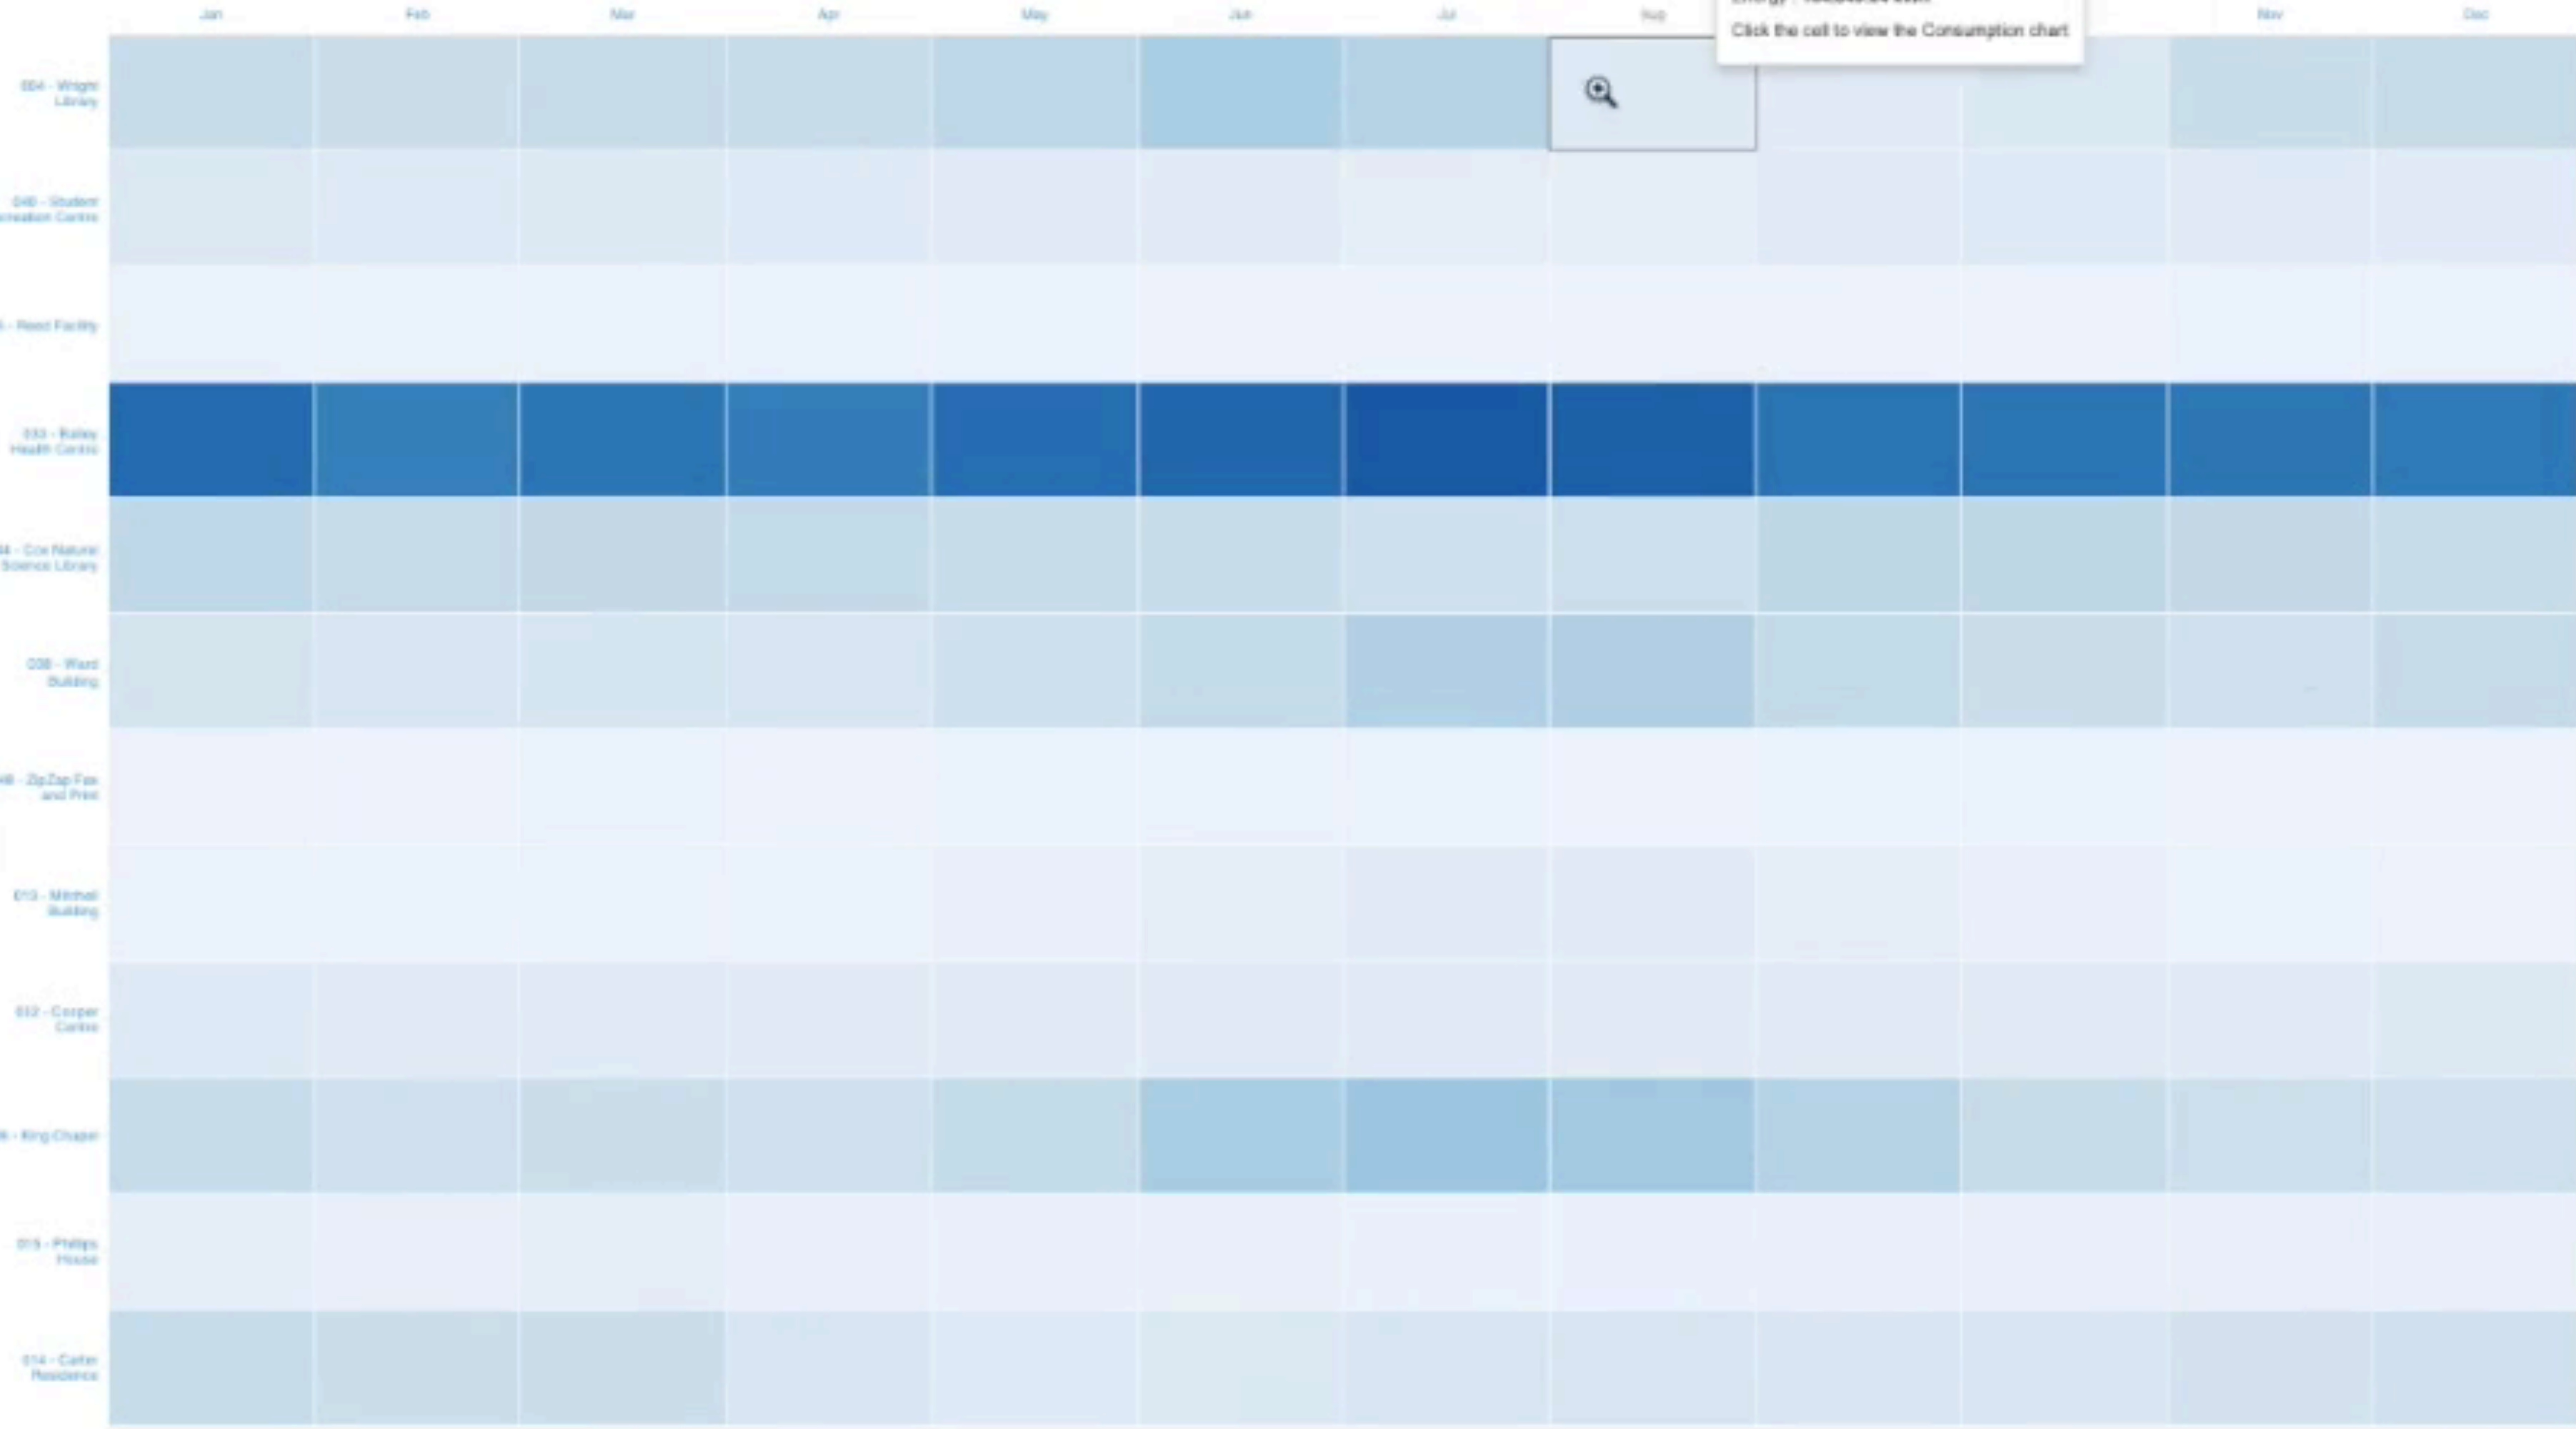

Wed Jan 1, 2014 to Wed Dec 31, 2014 Electricity Energy View aggregate

No baseline comparison

Site overview

All Sites (67)

Wed Jan 01, 2014 00:00 — Wed Dec 31, 2014 23:59 Electricity Disaggregate

DISCUSSION

FAMILIARITY

Persevere despite unfamiliarity: Juxtaposition of two unfamiliar encodings with coordinated interaction and highlighting.

Beware assuming familiarity: visualization names can be misleading (“*heatmap*”, “*boxplot*”)

TRUST

Auxiliary charts to combat information loss: derived aggregate values hide data: complement averages with representations of range and distribution.

Promote agency over derived values: provide energy worker more agency over aggregation, unit selection, and normalization.

FUTURE WORK

Post-deployment evaluation: track usage over an extended period of time, follow-up with additional interviews and focus groups.

CONCLUSION

Generalizable visualization design guidelines for multiple time series data, matches and mismatches between task and data abstractions to visual encoding and interaction idioms.

Higher-level guidelines with themes of familiarity & trust.

Methodological guidance for design studies in corporate contexts with internal and external stakeholders.

An industry visualization redesign study success story.

ENERGY MANAGER++

Currently **implemented** based on prototype designs and mockups:

parameterizable visualization: filtering and **aggregation** using categorical tags (normalization: not yet) (no more wizard dialogs)

matrix + auxiliary boxplots (top)

stacked area chart (middle), stacked bar chart

faceted line charts (bottom), faceted bar charts

navigation from matrix to other visualizations

trusted historical values instead / in addition to predicted values
