

Department of Computer Science
Undergraduate Events

More details @ <https://www.cs.ubc.ca/students/undergrad/life/upcoming-events>

CSSS BBQ

Date: Tues., Sept 10
Time: 12 – 1:30 pm
Location: Outside Reboot Cafe

Microsoft Resume Clinic

Date: Tues., Sept 10
Time: 5:30 pm
Location: DMP 110

Tri-mentoring Orientation

Date: Wed., Sept 11
Time: 5:15 pm
Location: DMP 110

TELUS Info Session

Date: Thurs., Sept 12
Time: 5:30 pm
Location: DMP 110

AI Applications

(Adversarial) Search: Checkers

Game playing was one of the first tasks undertaken in AI

Arthur Samuel at IBM wrote programs to play checkers (1950s)

- initially, they played at a strong amateur level
- however, they used some (simple) machine learning techniques, and soon outperformed Samuel

Source: *IBM Research*

Chinook's program was declared the Man-Machine World Champion in checkers in 1994!

...and completely solved by a program in 2007!

(Adversarial) Search: Chess

In 1996 and 1997, Gary Kasparov, the world chess grandmaster played two tournaments against Deep Blue, a program written by researchers at IBM

Source: *IBM Research*

(Adversarial) Search: Chess

Deep Blue's Results in the first tournament:

- won 1 game, lost 3 and tied 1
 - ✓ first time a reigning world champion lost to a computer

Source: CNN

(Adversarial) Search: Chess

Deep Blue's Results in the second tournament:

- second tournament: won 3 games, lost 2, tied 1

- 30 CPUs + 480 chess processors
- Searched 126.000.000 nodes per sec
- Generated 30 billion positions per move reaching depth 14 routinely

Sample A* applications

- **An Efficient A* Search Algorithm For Statistical Machine Translation.** 2001
- **The Generalized A* Architecture.** Journal of Artificial Intelligence Research (2007)
 - **Machine Vision** ... Here we consider a new compositional model for finding salient curves.
- **Factored A* search for models over sequences and trees** International Conference on AI. 2003....
It starts saying... *The primary challenge when using A* search is to find heuristic functions that simultaneously are admissible, close to actual completion costs, and efficient to calculate...* **applied to NLP and BioInformatics**

(Natural Language Processing)

CSPs: Crossword Puzzles

Daily Puzzles

370 puzzles from 7 sources.

Summary statistics:

- ◆ 95.3% words correct (miss three or four words per puzzle)
- ◆ 98.1% letters correct
- ◆ 46.2% puzzles completely correct

P	O	L	O	N	E		P	A	L	O	M	I	N	O

CSPs: Radio link frequency assignment

Assigning frequencies to a set of radio links defined between pairs of sites in order to **avoid interferences**.

Constraints on frequency depend on **position of the links** and on **physical environment**.

Source: *INRIA*

Sample Constraint network

CPS

Example: RNA secondary structure design

RNA strand made up of four bases: cytosine (C), guanine (G), adenine (A), and uracil (U)
2D/3D structure RNA strand folds into is important for its **function**

Predicting structure for a strand is “easy”: $O(n^3)$

But what if we want a strand that folds into a certain structure?

RNA strand
GUCCCAUAGGAUGUCCCAUAGGA

↓ Easy ↑ Hard

Secondary structure

One of the Best algorithms to date: Local search algorithm RNA-SSD **developed at UBC**
[Andronescu, Fejes, Hutter, Condon, and Hoos, Journal of Molecular Biology, 2004]

Constraint optimization problems

Optimization under constraints (similar to CSP)

E.g. mixed integer programming (software: **IBM CPLEX**)

- **Linear** program: $\max c^T x$ such that $Ax \leq b$
- **Mixed integer** program: additional constraints, $x_i \in \mathbb{Z}$ (integers)
- NP-hard, widely used in operations research and in industry

Transportation/Logistics:

SNCF, United Airlines
UPS, United States
Postal Service, ...

**Supply chain
management
software:**
Oracle,
SAP, ...

**Production planning
and optimization:**
Airbus, Dell, Porsche,
Thyssen Krupp,
Toyota, Nissan, ...

Modules we'll cover in this course: R&Rsys

CSP/logic: formal verification

Hardware verification
(e.g., IBM)

Software verification
(small to medium programs)

Most progress in the last 10 years based on:
Encodings into propositional satisfiability (SAT)

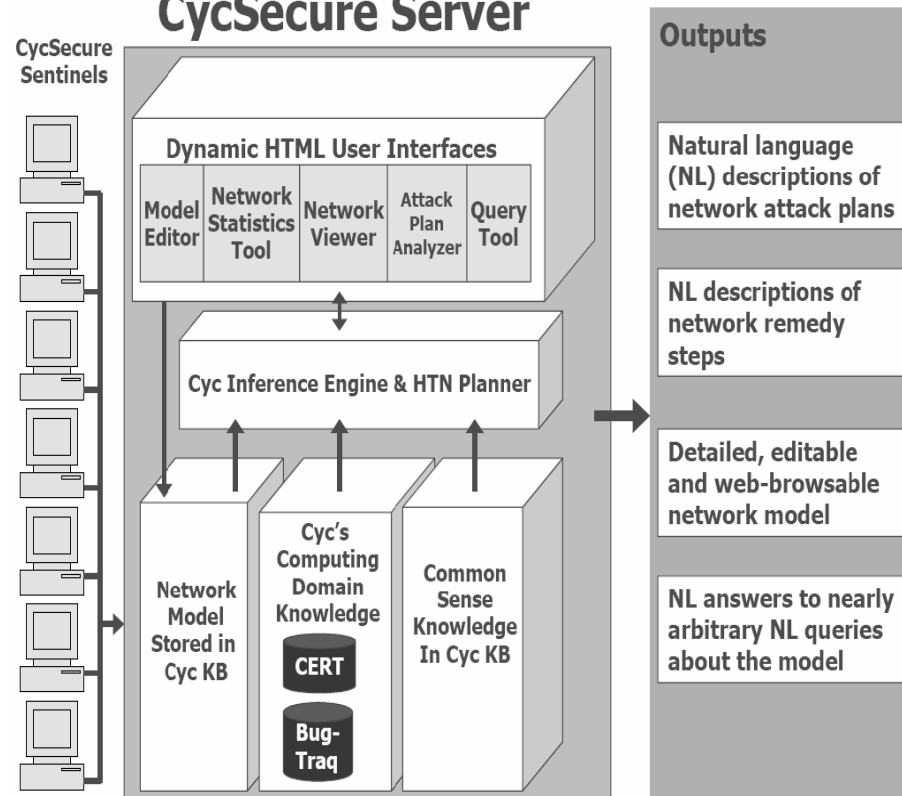

Logic: CycSecure

“scans a computer network to build a formal representation of the network, based on Cyc’s pre-existing ontology of networking, security, and computing concepts:

Excerpted from: *Shepard et al., 2005*
CycSecure Server

This formal representation also allows users to interact directly with the model of the network, allowing testing of proposed changes.”

- Knowledge Representation
- Web Mining & Semantic Web !

Sequential

Planning

Planning & Scheduling: Logistics

Dynamic Analysis and Replanning Tool (Cross & Walker)

- logistics planning and scheduling for military transport
- used in the 1991 Gulf War by the US
- problems had 50,000 entities (e.g., vehicles); different starting points and destinations

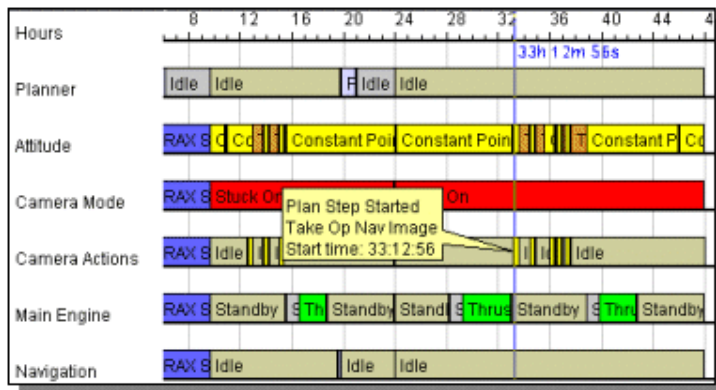

Planning: Spacecraft Control

NASA: Deep Space One spacecraft operated autonomously for two days in May, 1999:

- determined its precise position using stars and asteroids
 - ✓ despite a malfunctioning ultraviolet detector
- planned the necessary course adjustment
- fired the ion propulsion system to make this adjustment

For another space application see the Spike system for the Hubble telescope

Planning

Decision Network in Finance for venture capital decision

Source: R.E. Neapolitan, 2007

Planning Under Uncertainty

Learning and Using POMDP models of Patient-Caregiver Interactions During Activities of Daily Living

Goal: Help Older adults living with cognitive disabilities (such as Alzheimer's) when they:

- forget the proper sequence of tasks that need to be completed
- they lose track of the steps that they have already completed.

Planning Under Uncertainty

Helicopter control: MDP, reinforcement learning

States: all possible positions, orientations, velocities and angular velocities

Final solution involves
Deterministic **search!**

Source: *Andrew Ng 2004*

Military applications: ethical issues

- Robot soldiers
 - Existing: robot dog carrying heavy materials for soldiers in the field
 - The technology is there
- Unmanned airplanes
- Missile tracking
- Surveillance
- ...

Decision Theory: Decision Support Systems

E.g., **Computational Sustainability**

New interdisciplinary field, **AI is a key component**

- Models and methods for **decision making** concerning the **management and allocation of resources**
- to solve most challenging problems related to **sustainability**

Often **constraint optimization problems**. E.g.

- **Energy**: when and where to produce green energy most economically?
- Which parcels of land to purchase to **protect endangered species**?
- **Urban planning**: how to use budget for best development in 30 years?

Dimensions of Representational Complexity in CPSC322

We've already discussed:

- Deterministic versus stochastic domains
- Static versus sequential domains

Some other important dimensions of complexity:

- Explicit state or propositions or relations
- Flat or hierarchical
- Knowledge given versus knowledge learned from experience
- Goals versus complex preferences
- **Single-agent vs. multi-agent**

Multiagent Systems: Poker

Search Space: 1.2
quintillion nodes

“In full 10-player games Poki is **better than a typical low-limit casino player** and wins consistently; however, not as good as most experts
New programs being developed for the 2-player game are quite a bit better, and we believe they will very soon surpass all human players”

Multiagent Systems: Robot Soccer

Extremely complex

- Stochastic
- Sequence of actions
- Multiagent

robotic soccer competition was proposed by LCI (UBC) in 1992 (which became *Robocup* in 1997).

Source: *RoboCup* web site

TO DO for Next class

- Search: Start reading (Chpt 3 – sec 3.1 – 3.3)

CSPs: Radio link frequency assignment

Assigning frequencies to a set of radio links defined between pairs of sites in order to avoid interferences.

Source: *INRIA*

For each link two frequencies must be assigned
