

Multivariate Network Exploration and Presentation: From Detail to Overview via Selections and Aggregations

Stef van den Elzen
Jarke J. van Wijk

Infovis – Nov 11, 2014

presented by Francisco Escalona

What?

Multivariate Network

Exploration and Presentation: Why?

From Detail to Overview
via Selections and Aggregations How?

Who?

Stef van den Elzen

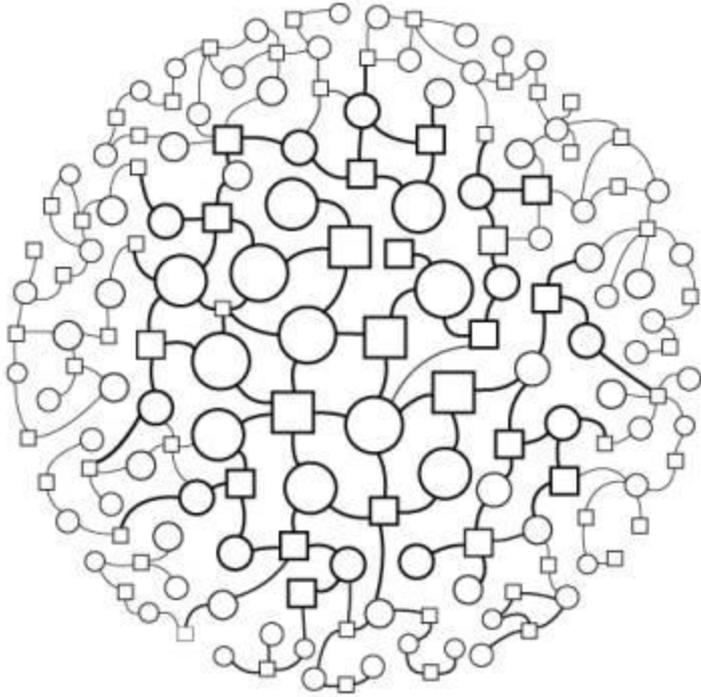

Jarke J. van Wijk

Infovis – Nov 11, 2014 When?

presented by Francisco Escalona

Huh?

Multivariate Network

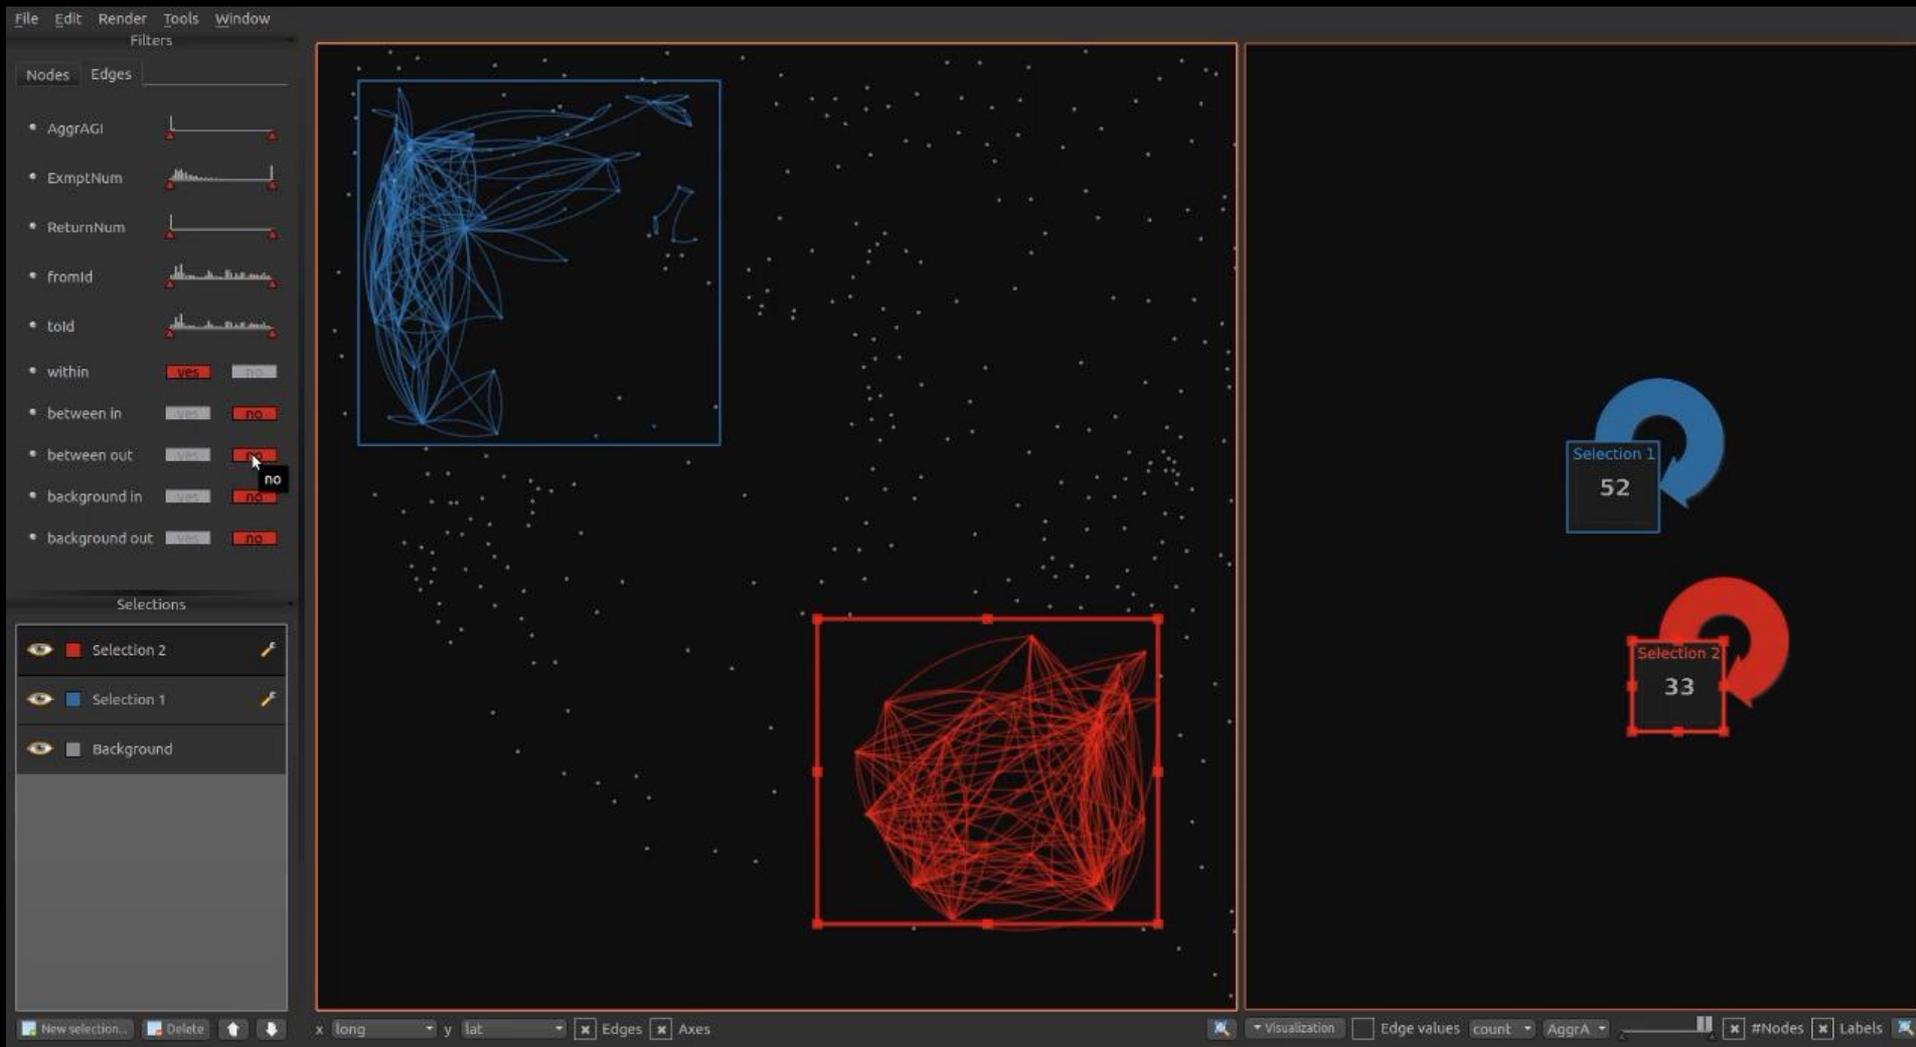

Example:
Census data by county of USA

Nodes
(also edges)

Math	Physics	Dance	Drama
85	95	70	65
90	80	60	50
65	50	90	90
50	40	95	80
40	60	80	90

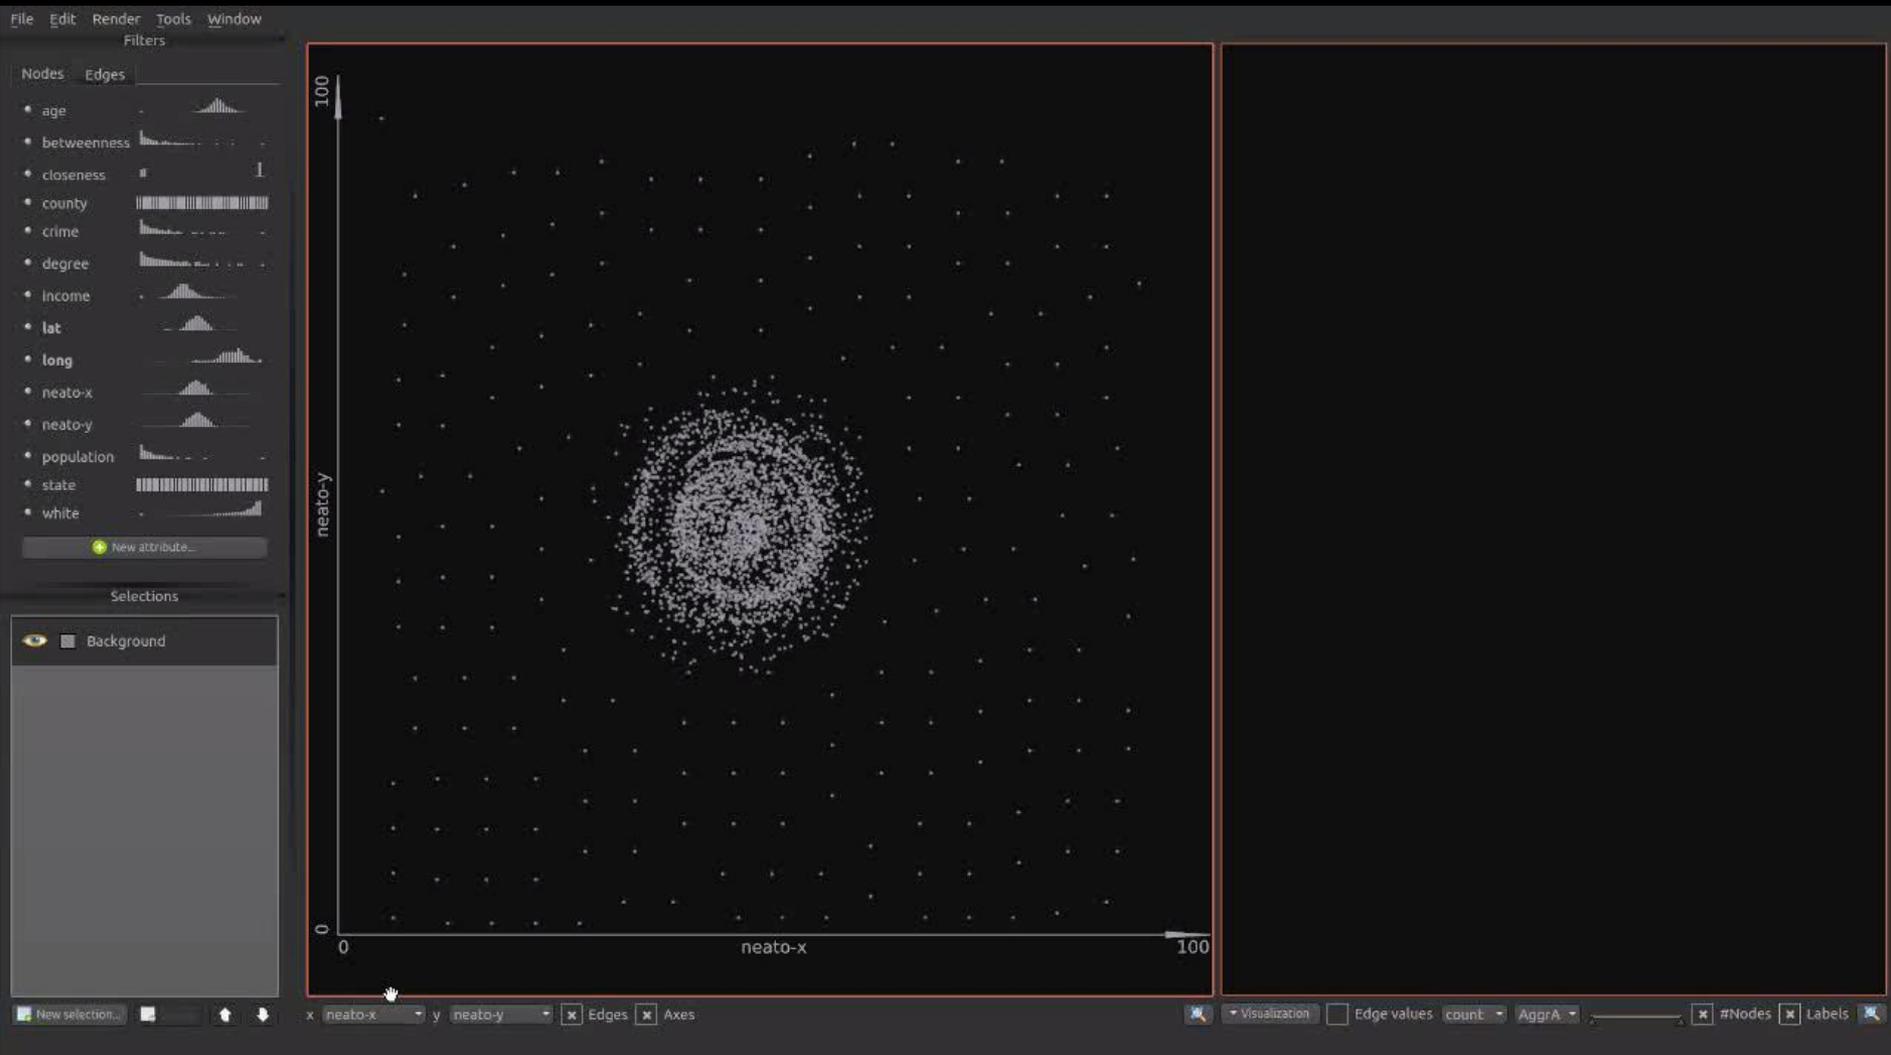

4 linked juxtaposed views: DOSA

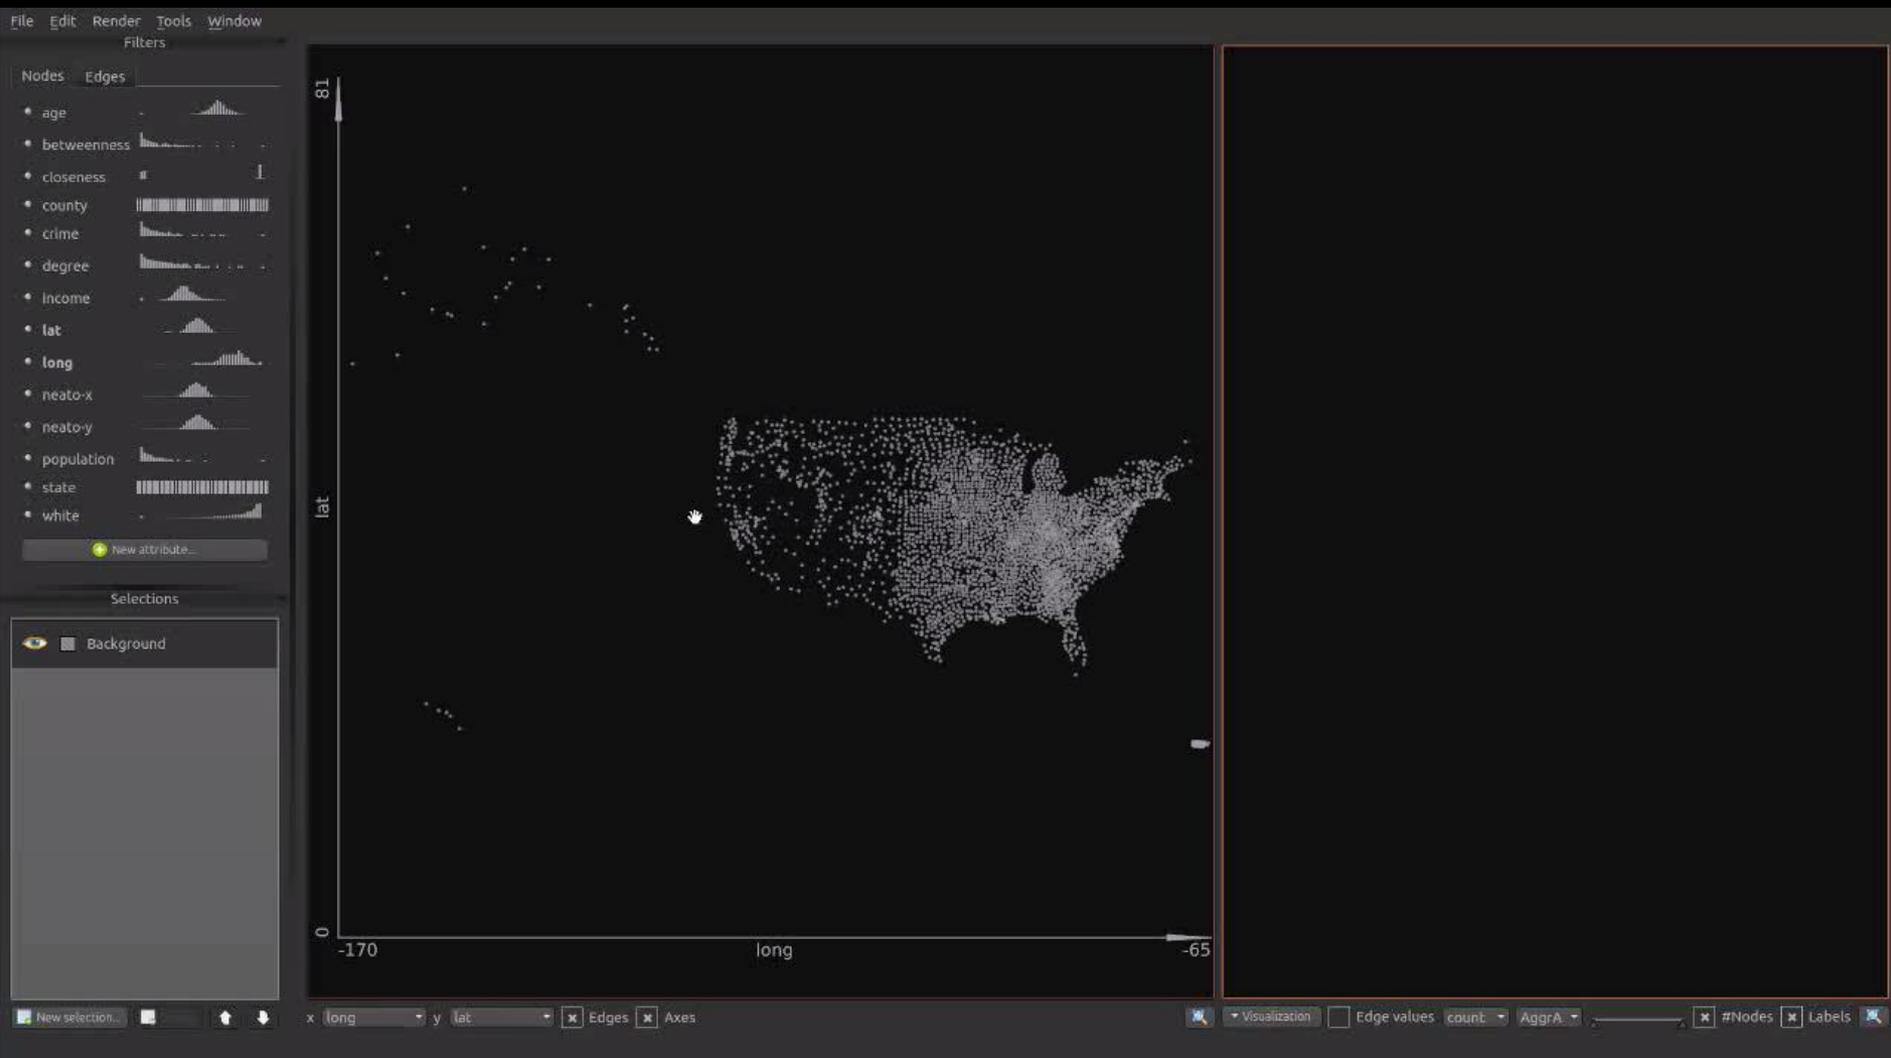

Exploration task

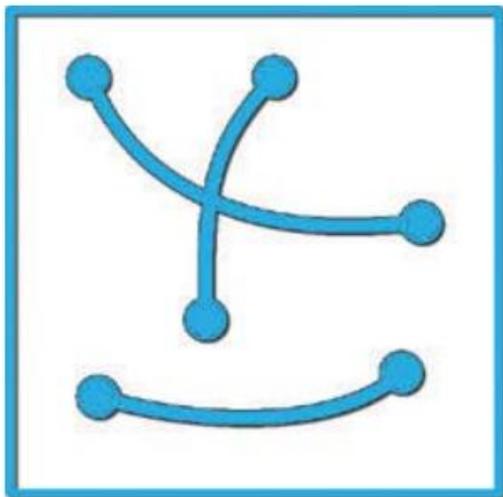

Presentation task

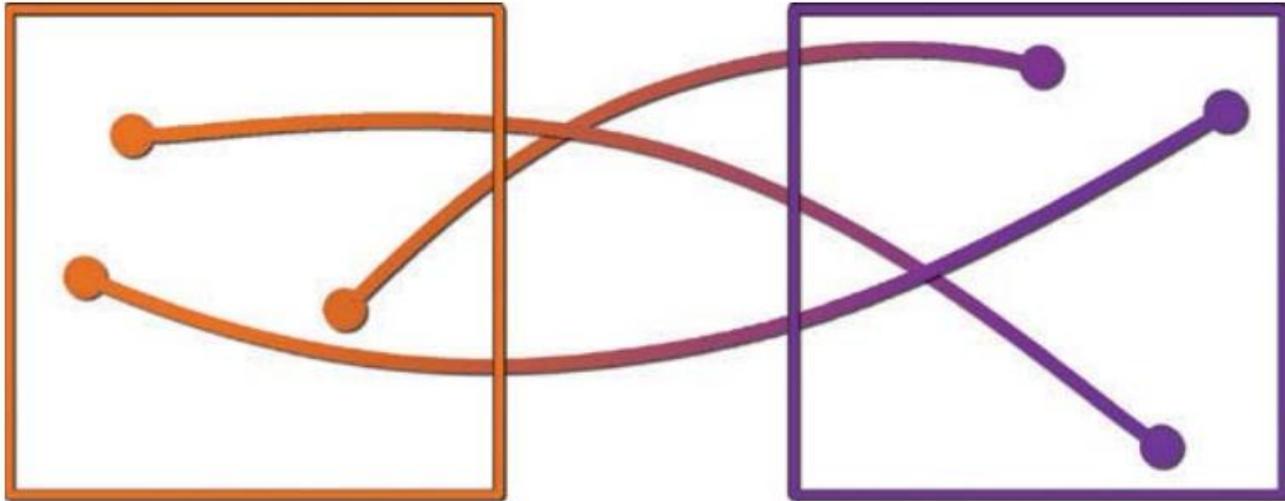

Adjustable 2D projection of nodes

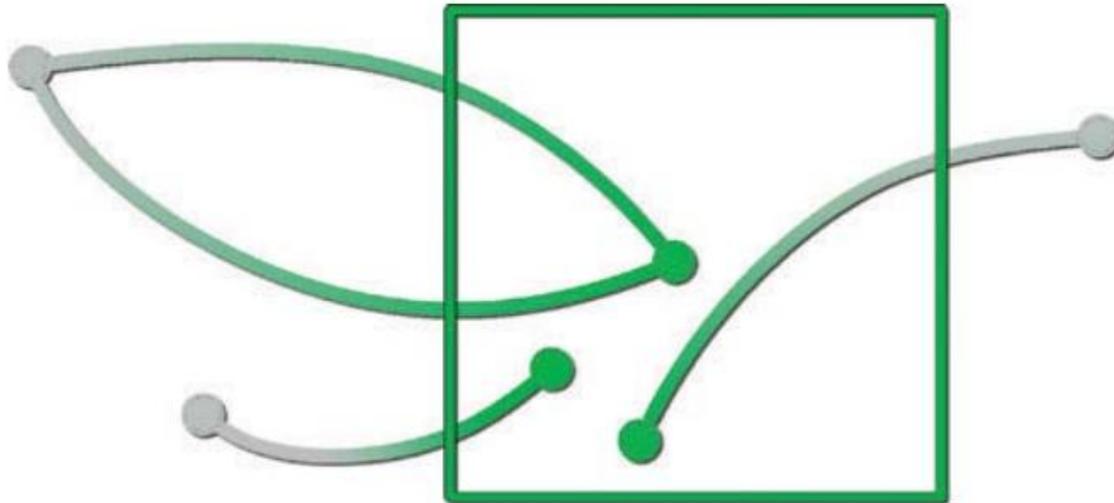

Selection: boxes, ranges

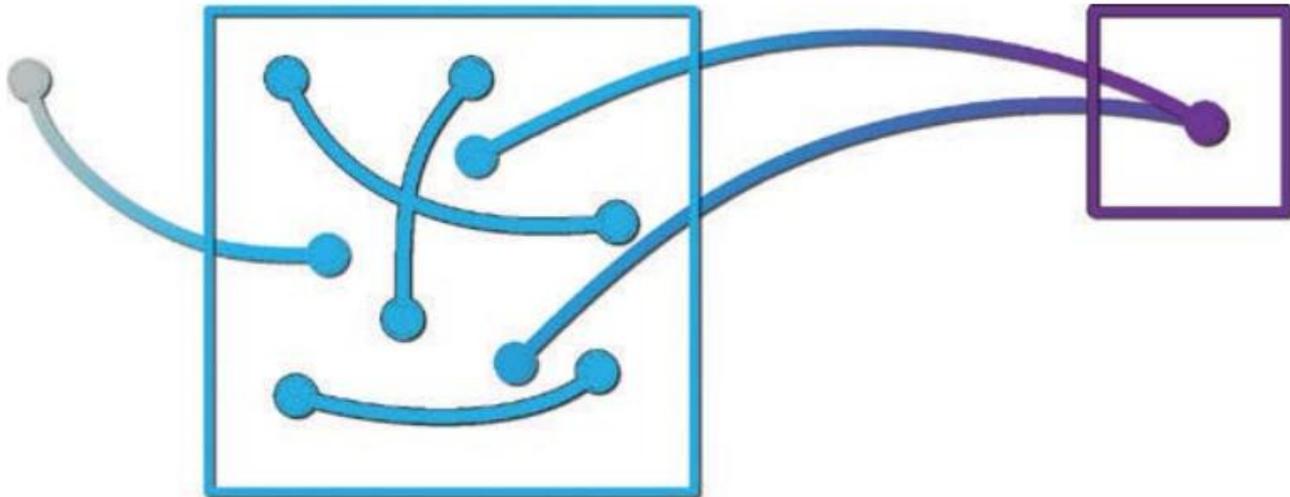

Within

Between – color map

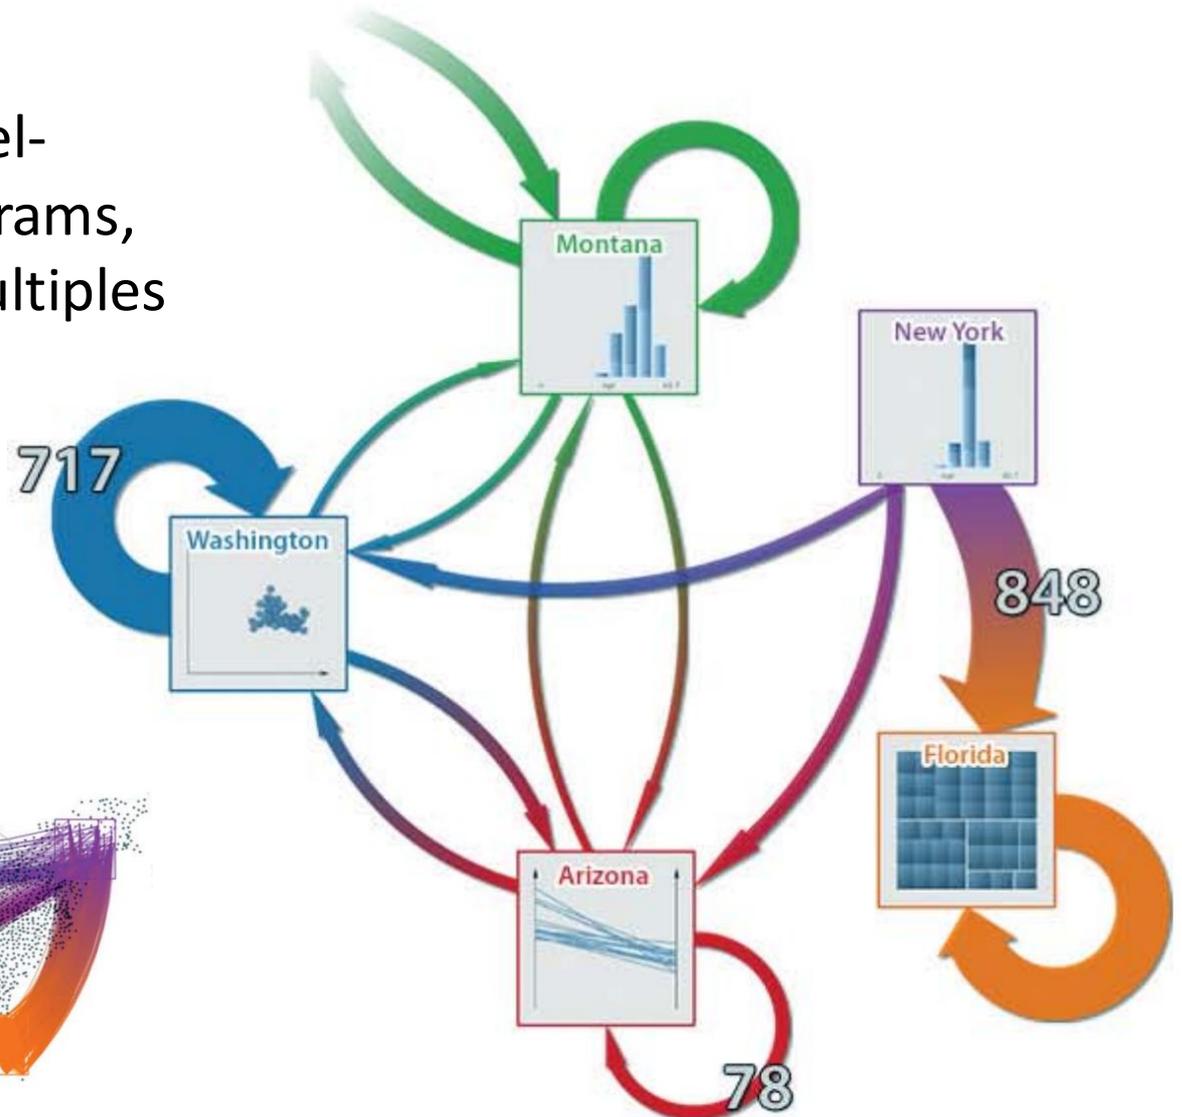

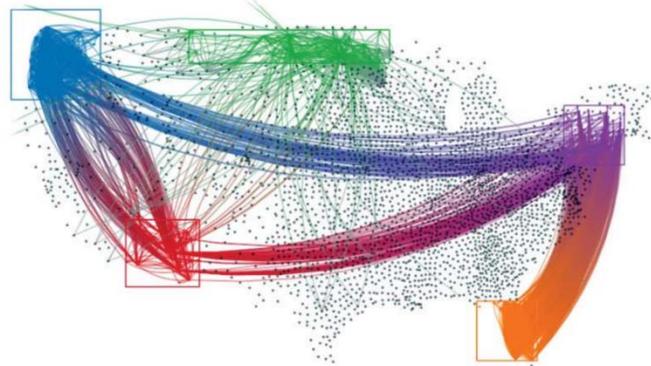

Background

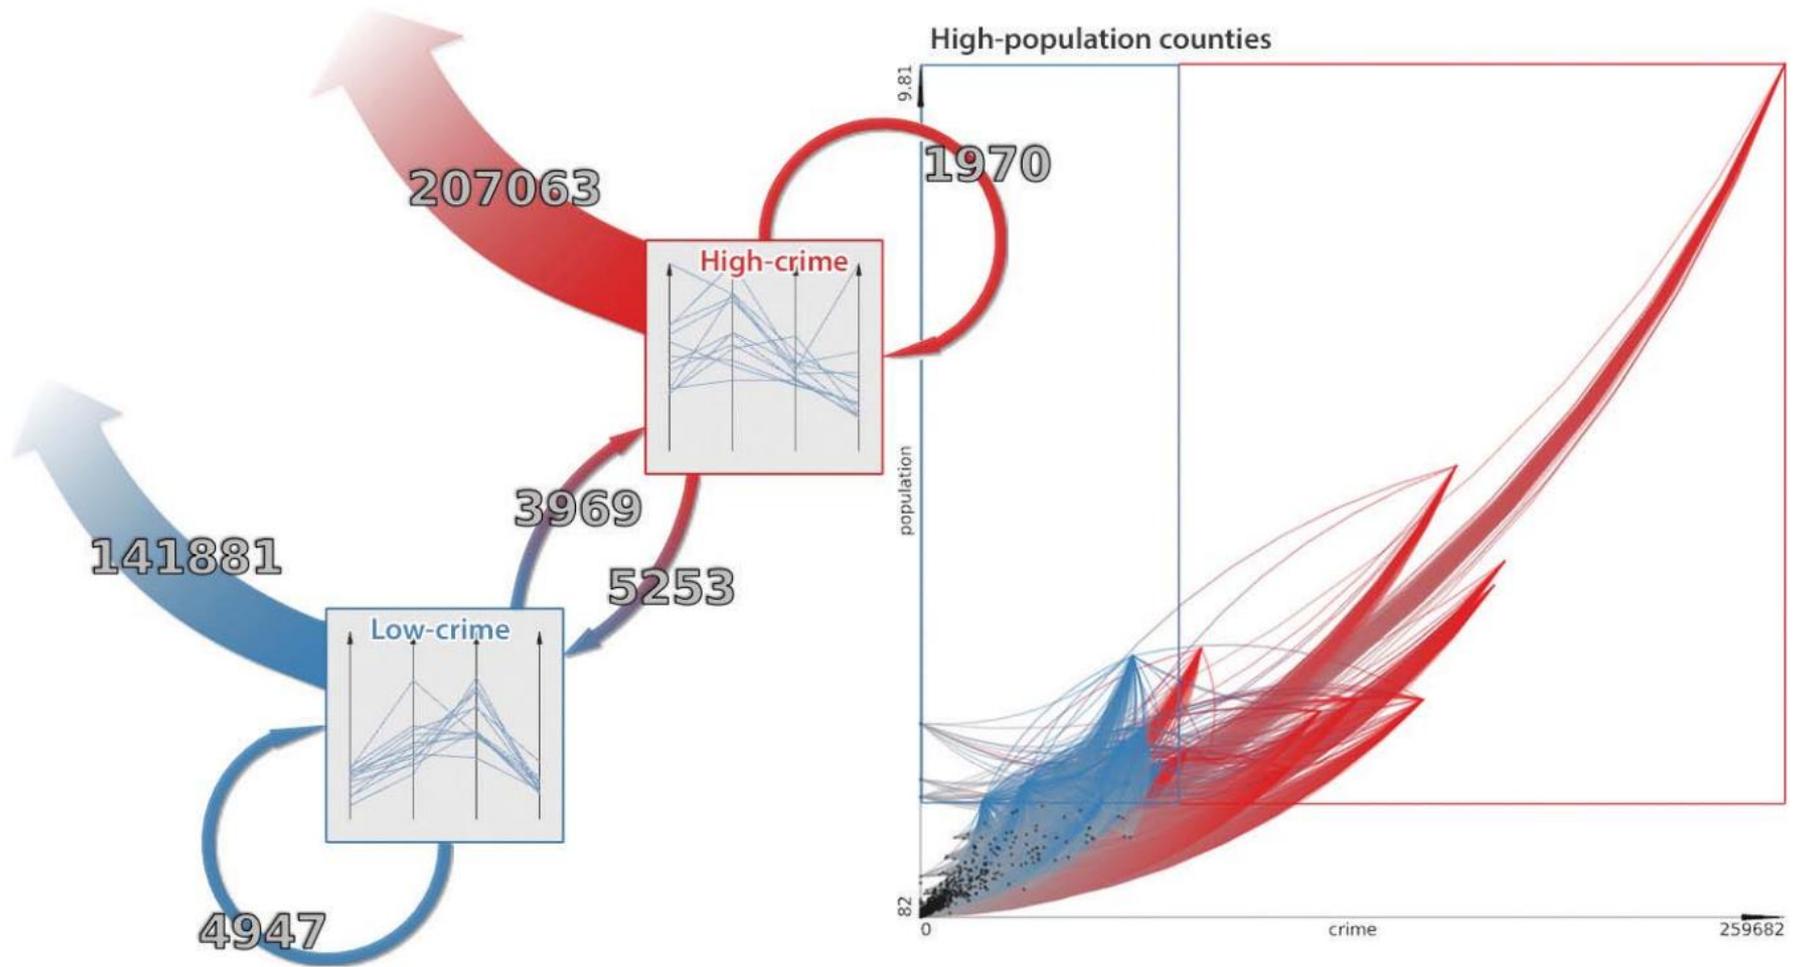

Combined

Overview

- Manual layout
- Scatterplots, parallel-coordinates, histograms, treemaps, small multiples
- Zooming
- Aggregation

Migration in highly populated counties

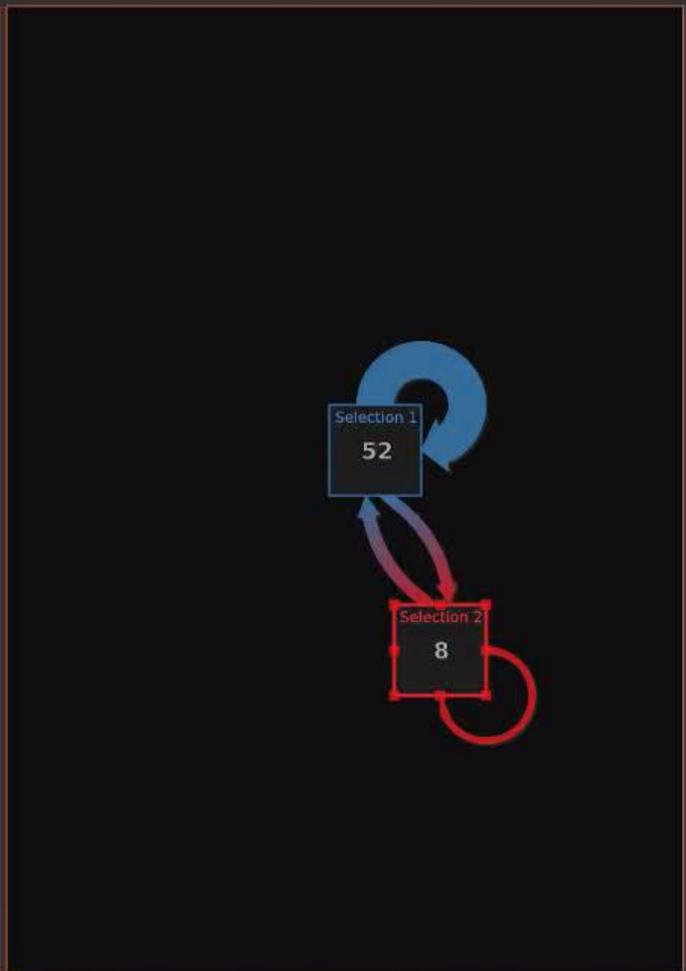

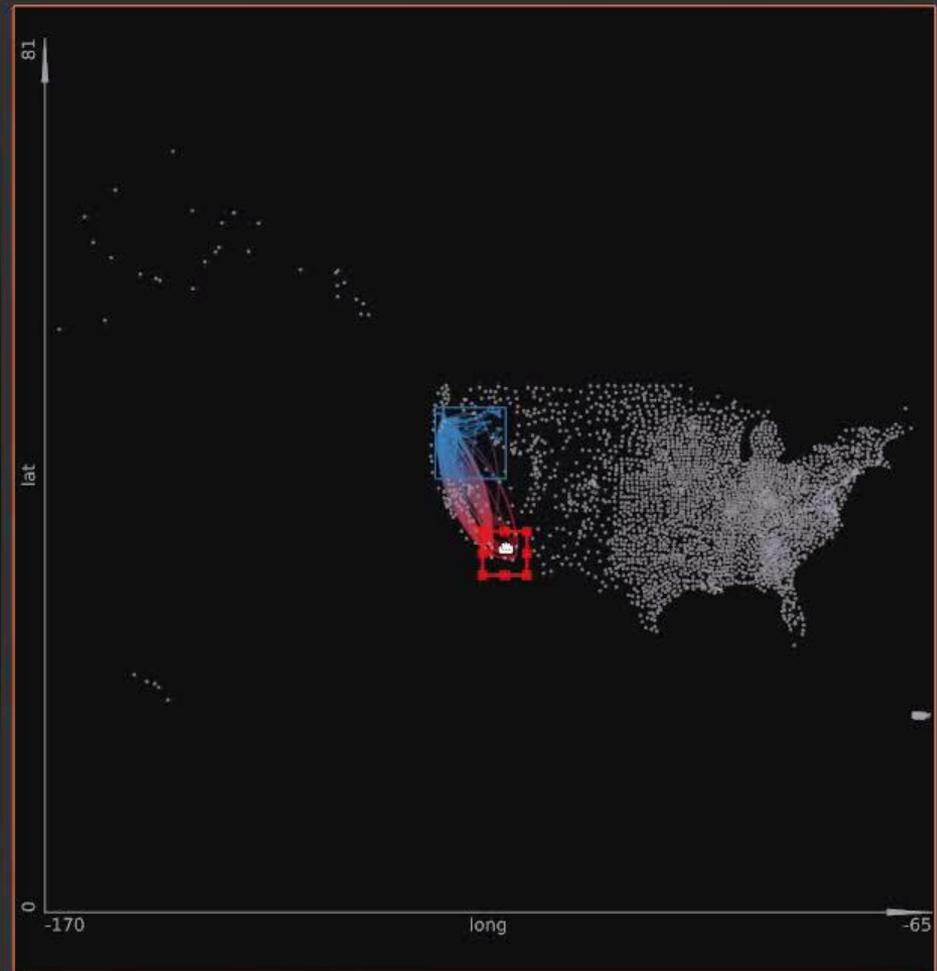

Nodes Edges

- age
- betweenness
- closeness
- county
- crime
- degree
- income
- lat
- long
- neato-x
- neato-y
- population
- state
- white

+ New attribute...

Selections

- Selection 2
- Selection 1
- Background

Scale

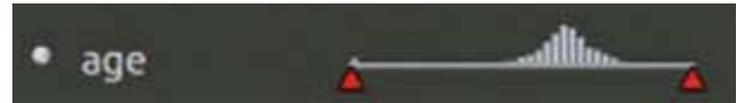

- 5-10 selections (2-6 expected)
- 1-2 dozen attributes
- 100s-1000s of nodes
 - more with aggregation
- $L < 4N$

Strengths

- Both network exploration and multivariate analysis
- Intuitive, easy to use (?)
- Dynamic exploration, visual querying
- Can be used by novices
- Expressive
 - Time
 - Topology

Limitations

- Partitions only by nodes
- Only supports ranges
- Limited scaling up
- No help on where to start
- Overview can be too summarized
- Axis can be difficult to see
- One tool in a toolkit

In Summary

A tool for **exploration and presentation** of **multivariate network data** using **selection and aggregation** in **juxtaposed linked views**
