

Information Visualization

Data, Tasks, Nested Model

Ex: Abstractions

Tamara Munzner

Department of Computer Science
University of British Columbia

Week 2: 14 September 2022

<http://www.cs.ubc.ca/~tmm/courses/547-22>

Course Logistics

Async so far

- last week
 - async read only
 - Course Logistics (no comments, no responses)
 - async read & comment
 - VAD Ch 1: Why Visualization? (comments only, no responses)
 - async discuss
 - self-intros
- this week
 - async read & comment & respond
 - VAD Ch 2: Data Abstraction
 - VAD Ch 3: Task Abstraction
 - paper: Nested Model [basis for VAD Ch 4]

Updates

- All students moved from waitlist to registered
 - official enrolment now 33
- Canvas link added
 - future: assignment handin
 - soon: marks for sync & async participation (posted weekly)

Mini-Lecture, Q&A: Round 1

Visualization Analysis & Design

Data Abstraction (Ch 2)

Tamara Munzner

Department of Computer Science
University of British Columbia

[@tamaramunzner](#)

Data abstraction: Three operations

- translate from domain-specific language to generic visualization language
- identify dataset type(s), attribute types
- identify cardinality
 - how many items in the dataset?
 - what is cardinality of each attribute?
 - number of levels for categorical data
 - range for quantitative data
- consider whether to transform data
 - guided by understanding of task

Dataset types

Tables

Items

Attributes

- flat table
 - one item per row
 - each column is attribute
 - cell holds value for item-attribute pair
 - unique key (could be implicit)

→ Tables

attributes: name, age, shirt size, fave fruit

ID	Name	Age	Shirt Size	Favorite Fruit
1	Amy	8	S	Apple
2	Basil	7	S	Pear
3	Clara	9	M	Durian
4	Desmond	13	L	Elderberry
5	Ernest	12	L	Peach
6	Fanny	10	S	Lychee
7	George	9	M	Orange
8	Hector	8	L	Loquat
9	Ida	10	M	Pear
10	Amy	12	M	Orange

item: person

Dataset types

Tables

Items

Attributes

- multidimensional tables
 - indexing based on multiple keys
- eg genes, patients

	A	B	C	D	E
1	A	B	C	D	E
2	1	2	3	4	5
3	1	2	3	4	5
4	1	2	3	4	5
5	1	2	3	4	5
6	1	2	3	4	5
7	1	2	3	4	5
8	1	2	3	4	5
9	1	2	3	4	5
10	1	2	3	4	5
11	1	2	3	4	5
12	1	2	3	4	5
13	1	2	3	4	5
14	1	2	3	4	5
15	1	2	3	4	5
16	1	2	3	4	5
17	1	2	3	4	5
18	1	2	3	4	5
19	1	2	3	4	5
20	1	2	3	4	5
21	1	2	3	4	5
22	1	2	3	4	5

Visualization Analysis & Design

Analysis: Nested Model (Ch 4)

Tamara Munzner

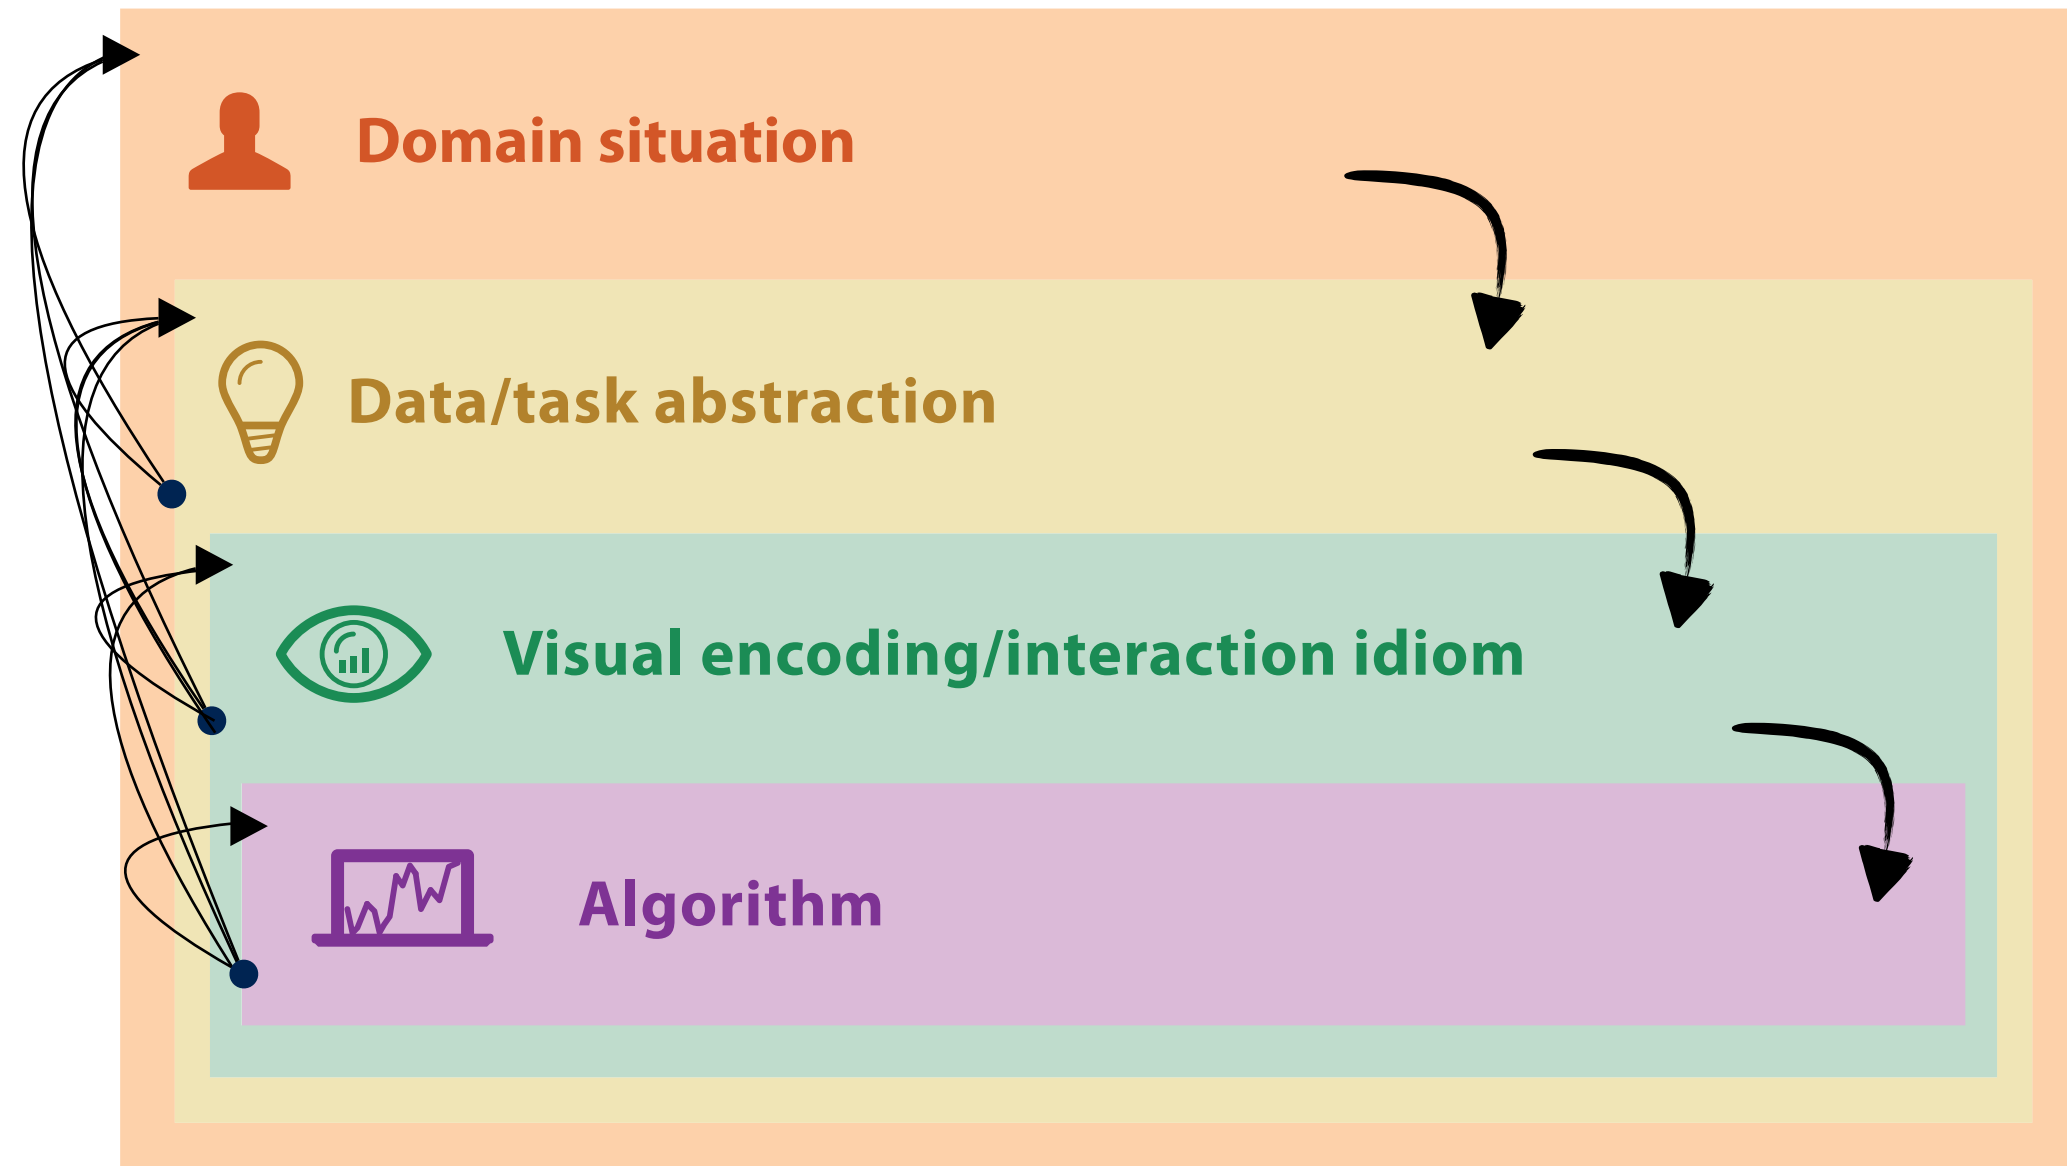

Department of Computer Science
University of British Columbia

[@tamaramunzner](#)

Nested model

- downstream: cascading effects
- upstream: iterative refinement

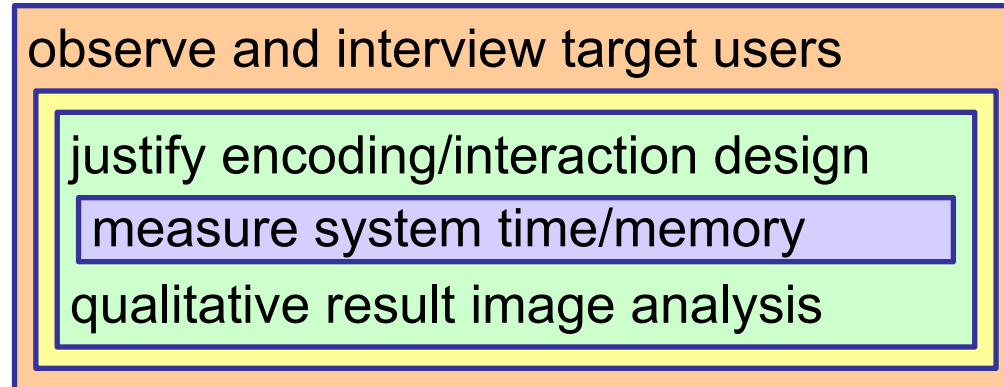

How to evaluate a visualization: So many methods, how to pick?

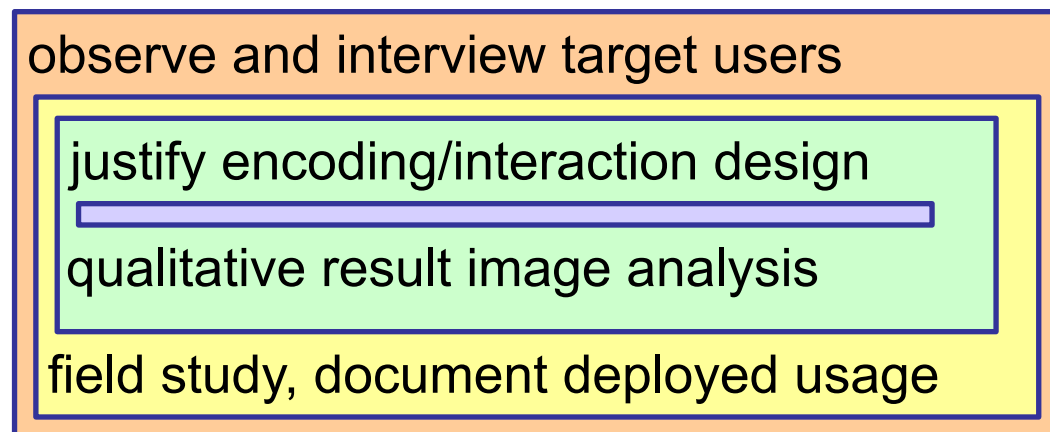

- Computational benchmarks?
 - quant: system performance, memory
- User study in lab setting?
 - quant: (human) time and error rates, preferences
 - qual: behavior/strategy observations
- Field study of deployed system?
 - quant: usage logs
 - qual: interviews with users, case studies, observations
- Analysis of results?
 - quant: metrics computed on result images
 - qual: consider what structure is visible in result images
- Justification of choices?
 - qual: perceptual principles, best practices

Analysis examples: Single paper includes only subset of methods

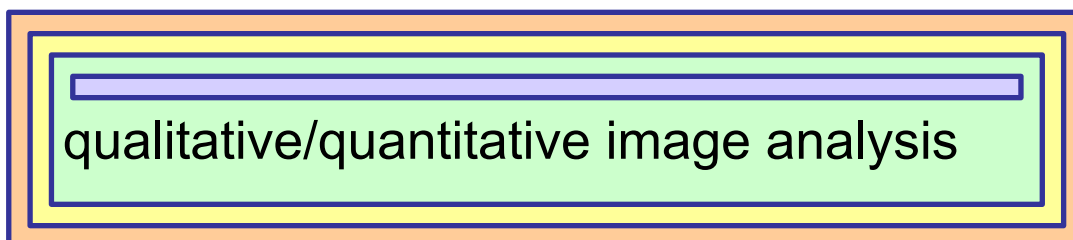

MatrixExplorer. Henry and Fekete. InfoVis 2006.

LiveRAC. McLachlan, Munzner, Koutsofios, and North. CHI 2008.

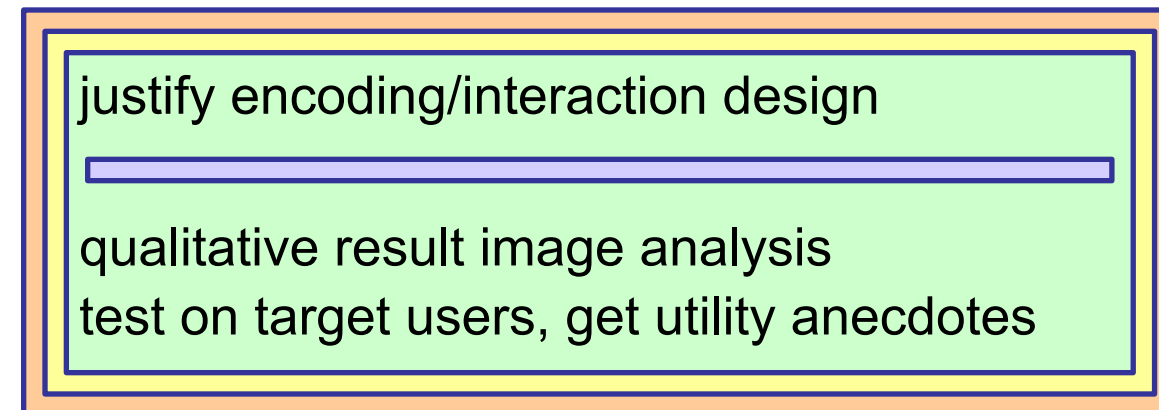

An energy model for visual graph clustering. (LinLog) Noack. Graph Drawing 2003

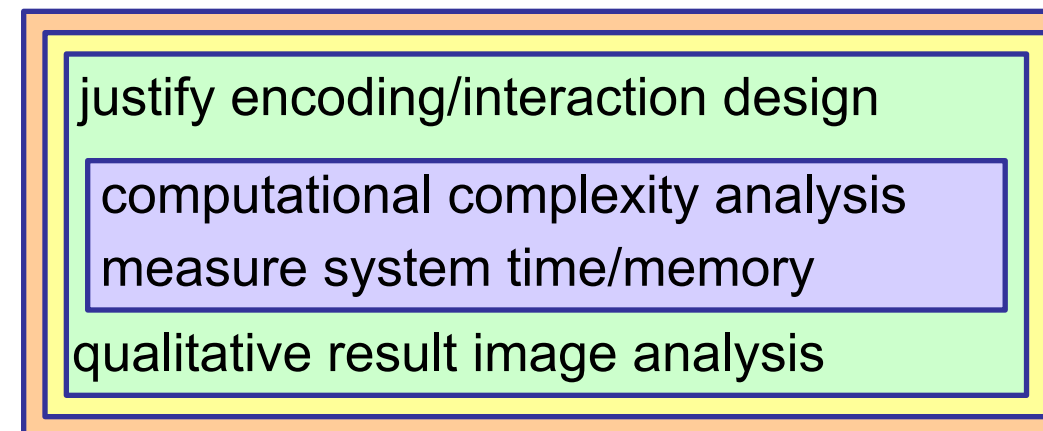

Effectiveness of animation in trend visualization. Robertson et al. InfoVis 2008.

Interactive visualization of genealogical graphs. McGuffin and Balakrishnan. InfoVis 2005.

Flow map layout. Phan et al. InfoVis 2005.

Paper Types

Paper types

- each has different contributions, validation methods, structure
 - design studies
 - technique/algorithm
 - evaluation
 - model/taxonomy
 - system

<http://ieevis.org/year/2017/info/call-participation/infovis-paper-types>

Paper types: Validation

- design studies
 - qualitative discussion of result images/videos
 - abstraction & idiom validation: case studies, field studies, design justification
- technique/algorithm
 - qualitative discussion of result images/videos
 - algorithm validation for algorithm papers: computational benchmarks
 - idiom validation for technique papers: controlled experiments
- evaluation
 - (controlled experiment as primary contribution)
- theory/model/taxonomy
 - *show power: descriptive, generative, evaluative, (predictive)*
- system
 - *show power for developer using system*

Paper structures

- typical research paper vs expectations for this course final report
 - more on implementation
 - novel research contribution not required

<http://www.cs.ubc.ca/~tmm/courses/547-17/projectdesc.html#outlines>

Reading visualization papers

- one strategy: multiple passes
 - title
 - abstract, authors/affiliation
 - flip through, glance at figures, notice structure from section titles
 - skim intro, results/discussion (maybe conclusion)
 - fast read to get big ideas
 - if you don't get something, just keep going
 - second pass to work through details
 - later parts may cast light on earlier parts for badly structured papers
 - third pass to dig deep
 - if it's highly relevant, or you're presenting it to class
- literature search
 - decide when to stop reading: is this relevant to my current concerns?

Literature search

- this course: I will give you seed papers during our 1 on 1 meetings
- forwards vs backwards search
 - Google Scholar forward citations!
 - only a subset of forwards & backwards citations will be what you need
- building up landscape
 - authors/affiliations will have more signal as you develop expertise

Exercise: Abstractions

Data abstraction: Three operations

- translate from domain-specific language to generic visualization language
- identify dataset type(s), attribute types
- identify cardinality
 - how many items in the dataset?
 - what is cardinality of each attribute?
 - number of levels for categorical data
 - range for quantitative data
- consider whether to transform data
 - guided by understanding of task

Now: In-class design exercise, in small groups

- Abstractions
 - practice with data & task abstractions, on concrete example: Aid to Countries
 - crucial ideas: determine cardinalities/ranges
 - precondition for all decisions about visual encoding
- Small-group exercise: 60-ish min
 - breakout groups (4 people/group)
 - googledoc worksheets, as before
 - document in your group's googledoc w/ text as you go!
 - reportbacks, as before (intermediate and final)
 - I'll flip through googledocs, some questions for group spokesperson

Next week

- to read & discuss (async, before next class)
 - VAD book, Ch 5: Marks & Channels
 - VAD book, Ch 6: Rules of Thumb
 - paper: Design Study Methodology

Backup/Reference Slides

Ch 1. What's Vis, and Why Do It?

Defining visualization (vis)

Computer-based visualization systems provide visual representations of datasets designed to help people carry out tasks more effectively.

Why?...

Visualization (vis) defined & motivated

Computer-based visualization systems provide visual representations of datasets designed to help people carry out tasks more effectively.

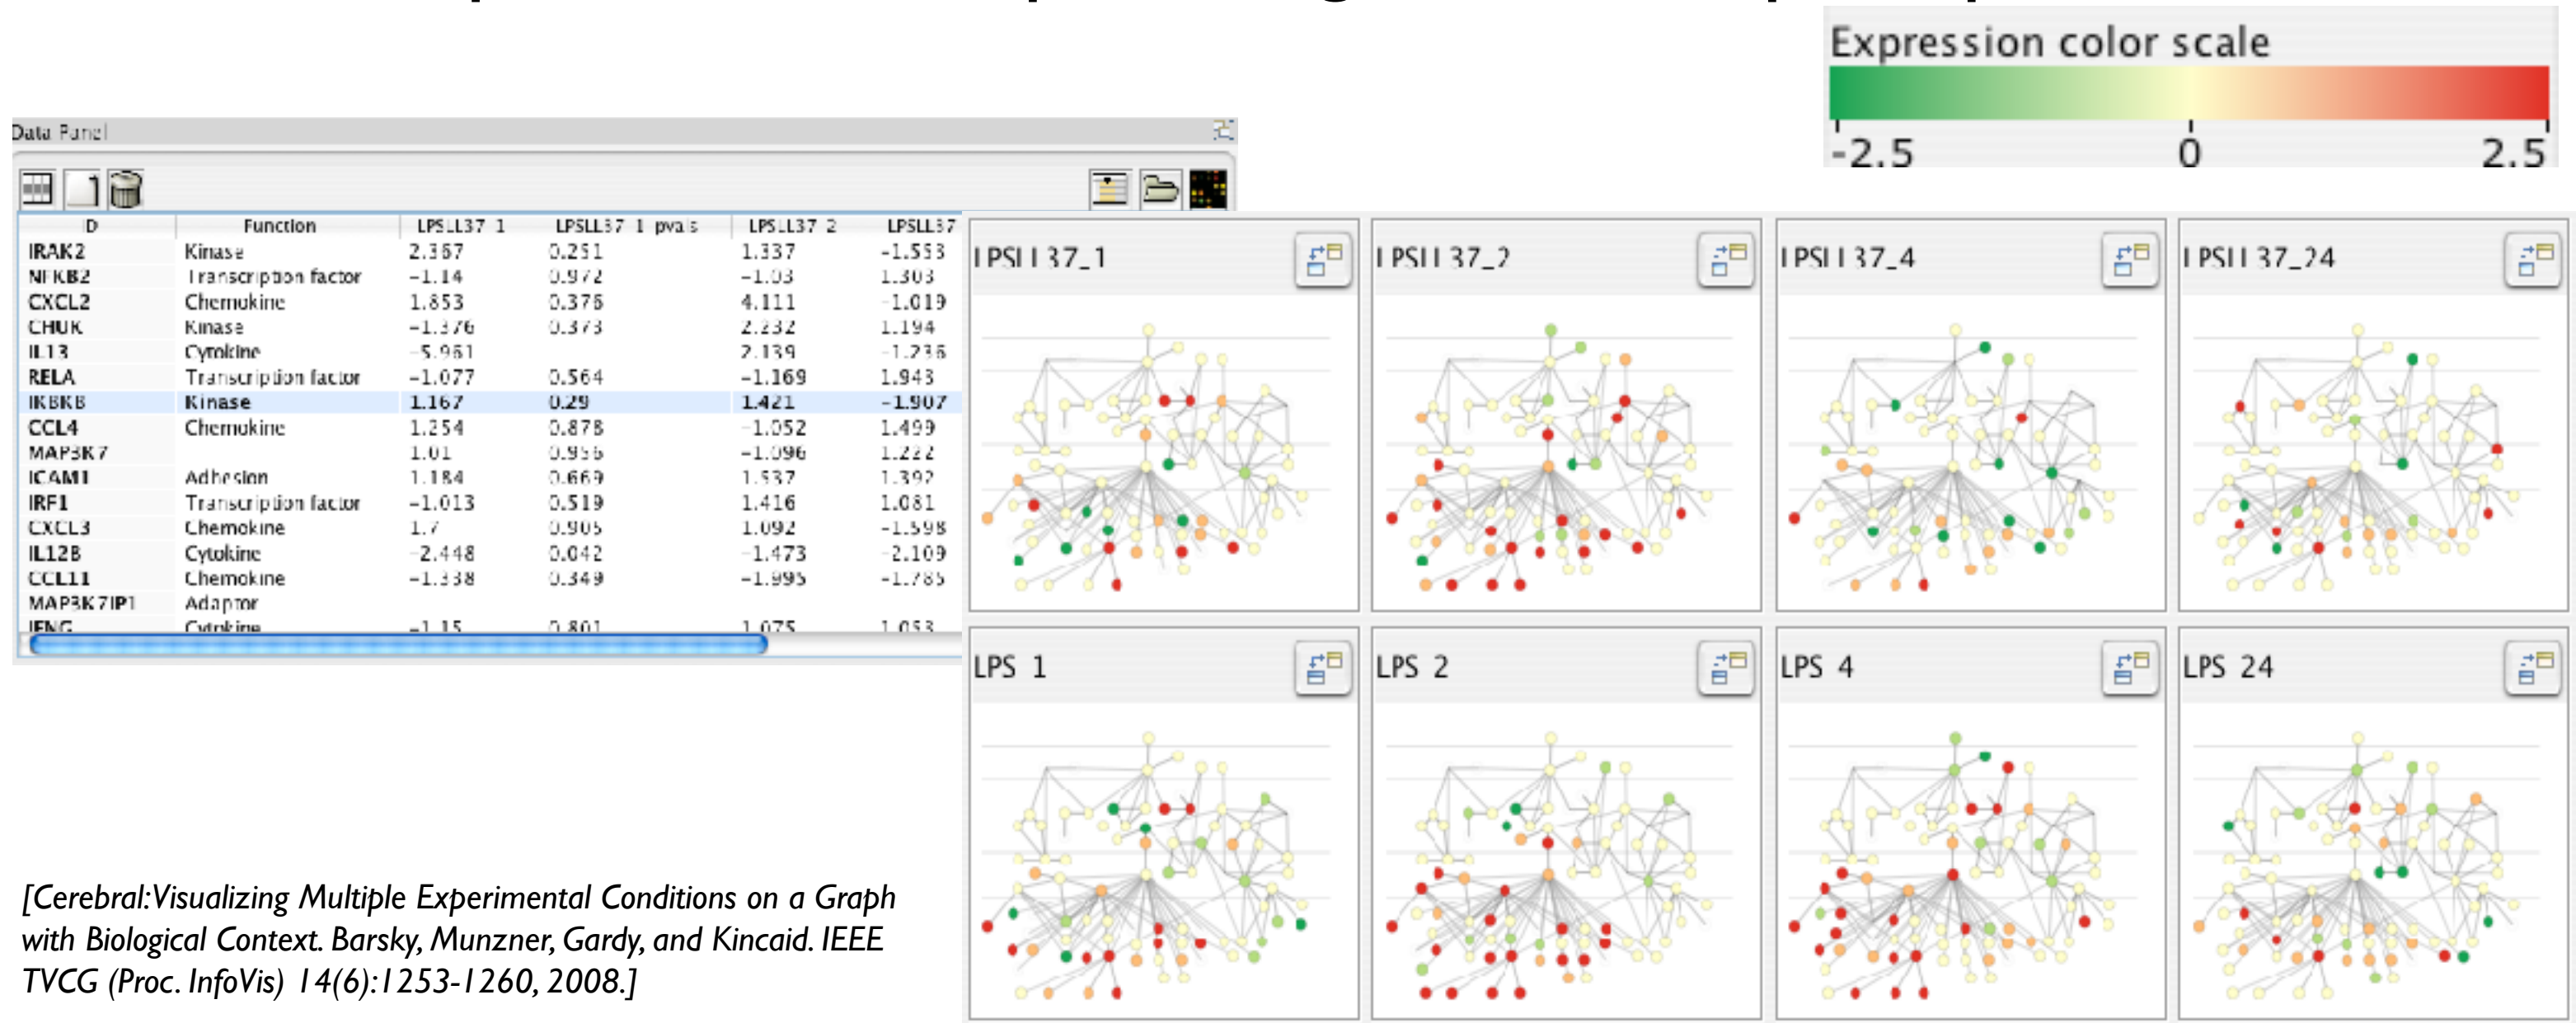

Visualization is suitable when there is a need to augment human capabilities rather than replace people with computational decision-making methods.

- human in the loop needs the details & no trusted automatic solution exists
 - doesn't know exactly what questions to ask in advance
 - exploratory data analysis
 - **speed up** through human-in-the-loop visual data analysis
 - present known results to others
 - stepping stone towards automation
 - before model creation to provide understanding
 - during algorithm creation to refine, debug, set parameters
 - before or during deployment to build trust and monitor

Why use an external representation?

Computer-based visualization systems provide **visual representations of datasets** designed to help people carry out tasks more effectively.

- external representation: replace cognition with perception

Why depend on vision?

Computer-based visualization systems provide  visual representations of datasets designed to help people carry out tasks more effectively.

- human visual system is high-bandwidth channel to brain
 - overview possible due to background processing
 - subjective experience of seeing everything simultaneously
 - significant processing occurs in parallel and pre-attentively
- sound: lower bandwidth and different semantics
 - overview not supported
 - subjective experience of sequential stream
- touch/haptics: impoverished record/replay capacity
 - only very low-bandwidth communication thus far
- taste, smell: no viable record/replay devices

Why represent all the data?

Computer-based visualization systems provide visual representations of datasets designed to help people carry out tasks more effectively.

- summaries lose information, details matter
 - confirm expected and find unexpected patterns

- assess validity of statistical model

Anscombe's Quartet

Identical statistics

x mean	9
x variance	10
y mean	7.5
y variance	3.75
x/y correlation	0.816

<https://www.youtube.com/watch?v=DbJyPELmhJc>

Same Stats, Different Graphs

Visualization defined & motivated

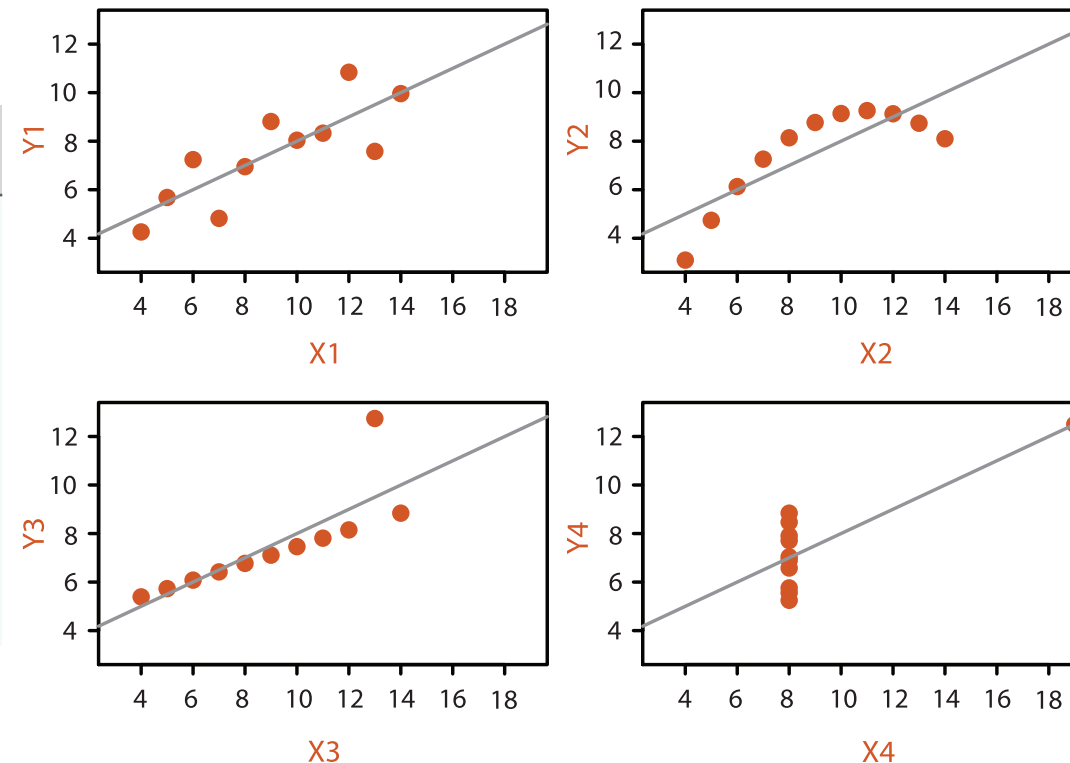

Computer-based visualization systems provide visual representations of datasets designed to help people carry out tasks more effectively.

- suitable when human in the loop needs details
 - interplay between human judgement and automatic computation

Anscombe's Quartet

Identical statistics

x mean	9
x variance	10
y mean	7.5
y variance	3.75
x/y correlation	0.816

Datasaurus Dozen

Same Stats, Different Graphs: Generating Datasets with Varied Appearance and Identical Statistics through Simulated Annealing. CHI 2017.

Why focus on tasks and effectiveness?

Computer-based visualization systems provide visual representations of datasets designed to help people carry out tasks more effectively.

- effectiveness requires match between data/task and representation
 - set of representations is huge
 - many are ineffective mismatch for specific data/task combo
 - increases chance of finding good solutions if you understand full space of possibilities
- what counts as effective?
 - novel: enable entirely new kinds of analysis
 - faster: speed up existing workflows
- how to validate effectiveness
 - many methods, must pick appropriate one for your context

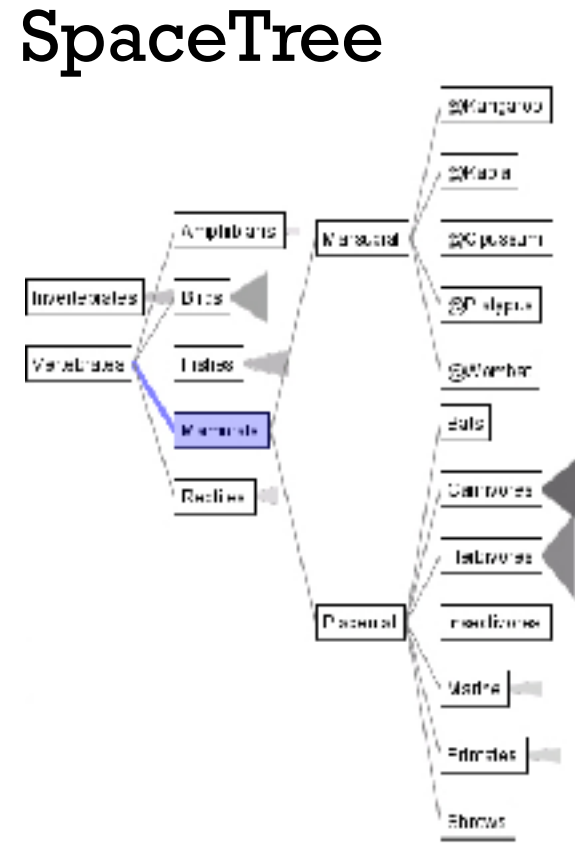

What resource limitations are we faced with?

Vis designers must take into account three very different kinds of resource limitations: those of computers, of humans, and of displays.

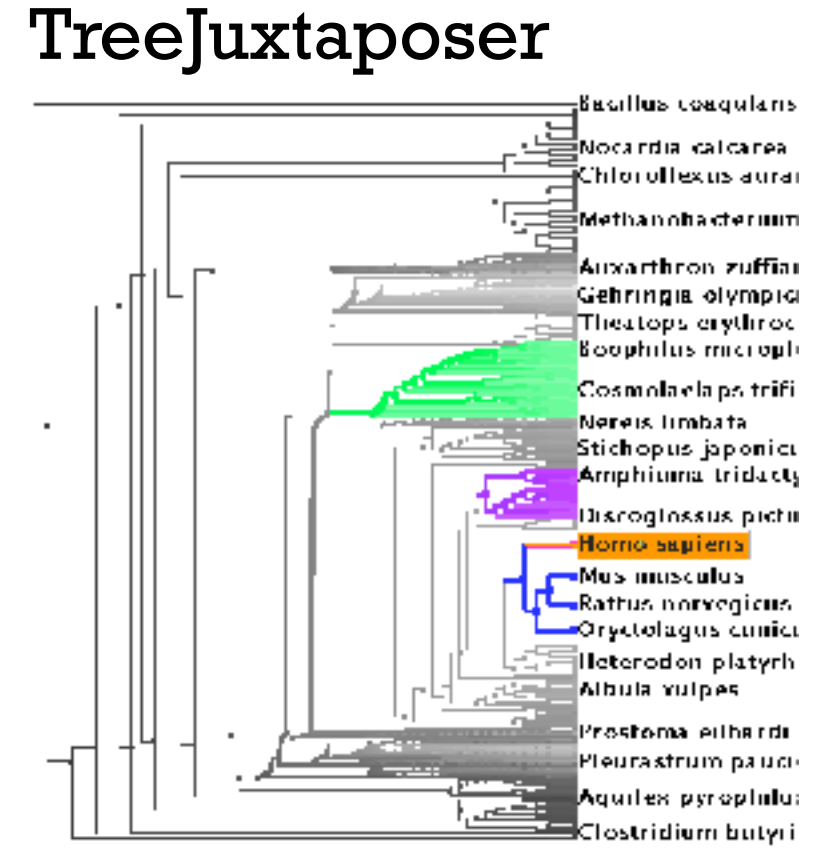

- computational limits
 - processing time
 - system memory
- human limits
 - human attention and memory
- display limits
 - pixels are precious resource, the most constrained resource
 - **information density**: ratio of space used to encode info vs unused whitespace
 - tradeoff between clutter and wasting space, find sweet spot between dense and sparse

Why analyze?

- imposes structure on huge design space
 - scaffold to help you think systematically about choices
 - analyzing existing as stepping stone to designing new
 - most possibilities ineffective for particular task/data combination

→ Spatial

→ Fields (Continuous)

Spatial fields

- attribute values associated w/ cells
- cell contains value from continuous domain
 - eg temperature, pressure, wind velocity
- measured or simulated

→ Spatial

→ Fields (Continuous)

Spatial fields

- attribute values associated w/ cells
- cell contains value from continuous domain
 - eg temperature, pressure, wind velocity
- measured or simulated
- major concerns
 - sampling:
where attributes are measured
 - interpolation:
how to model attributes elsewhere
 - grid types

Spatial fields

- attribute values associated w/ cells
- cell contains value from continuous domain
 - eg temperature, pressure, wind velocity
- measured or simulated
- major concerns
 - sampling:
where attributes are measured
 - interpolation:
how to model attributes elsewhere
 - grid types
- major divisions
 - attributes per cell:
scalar (1), vector (2), tensor (many)

scalar

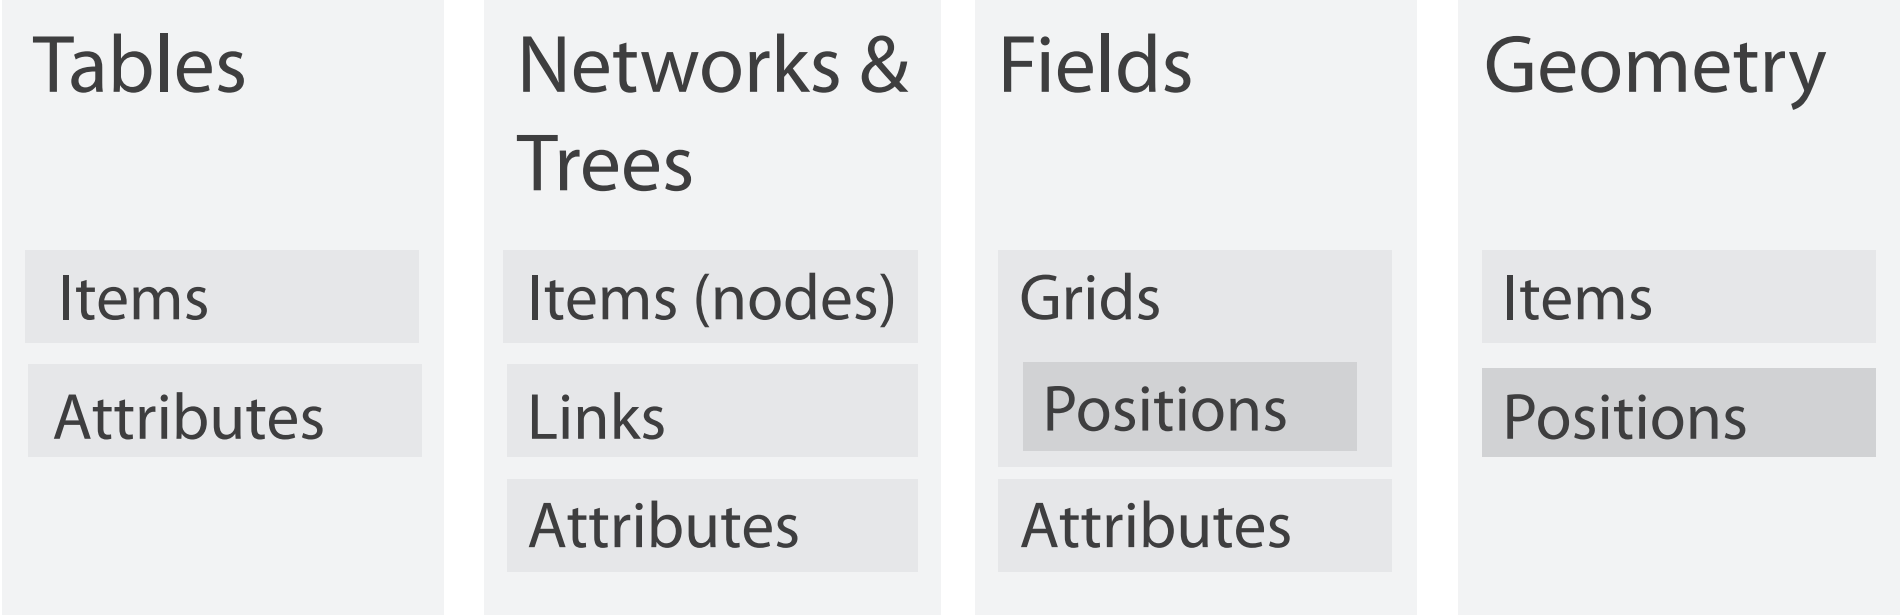

vector

tensor

Dataset types

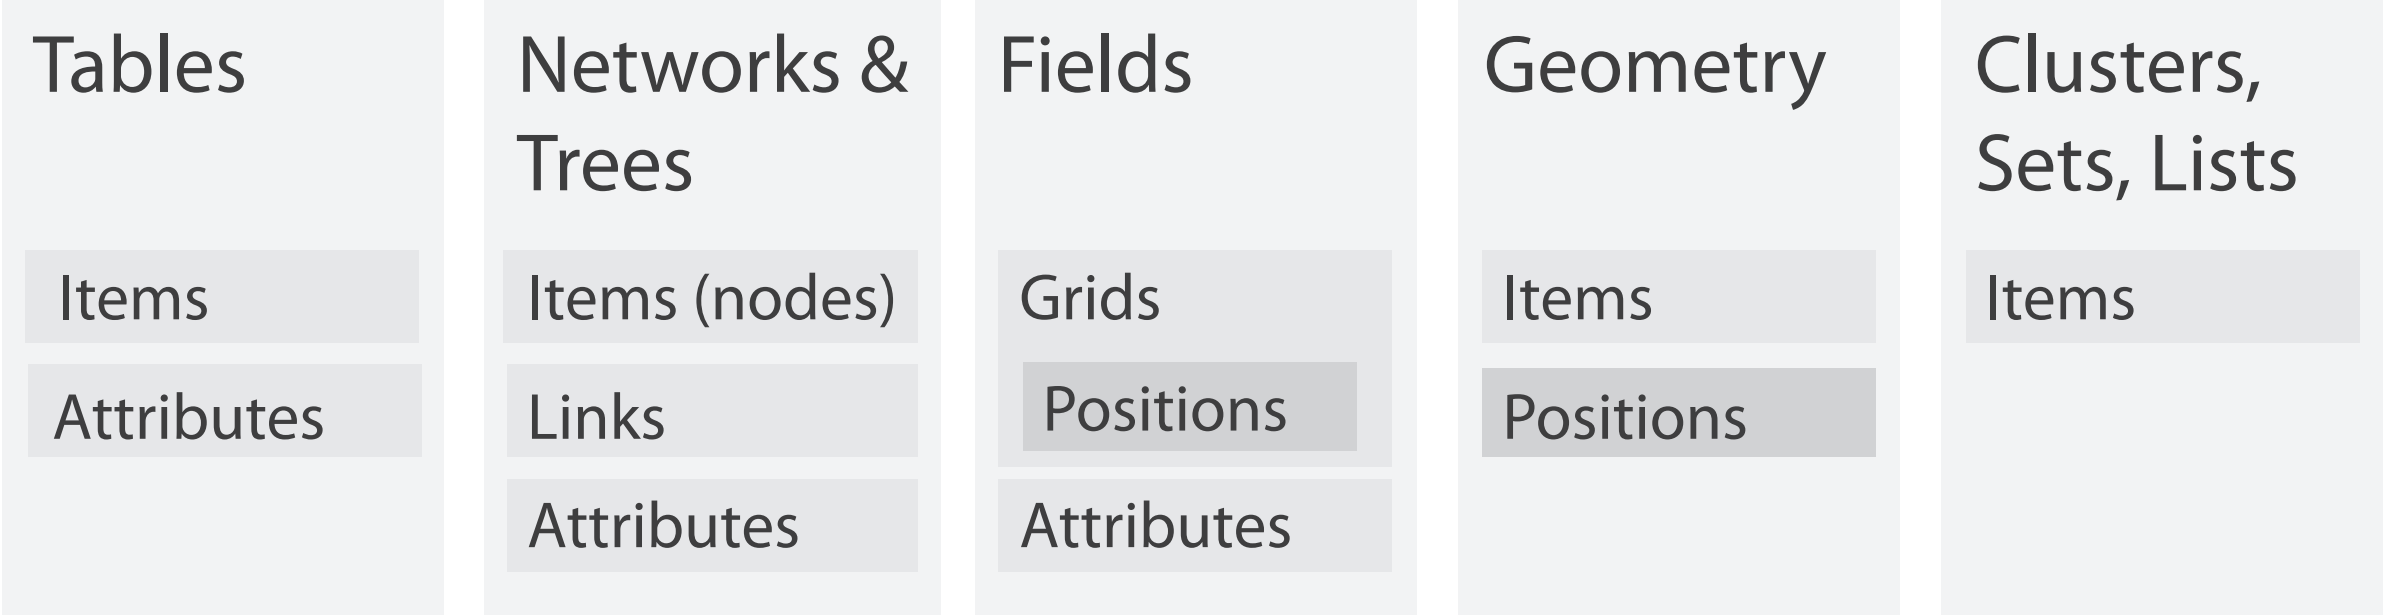

Geometry

- shape of items
- explicit spatial positions / regions
 - points, lines, curves, surfaces, volumes
- boundary between computer graphics and visualization
 - graphics: geometry taken as given
 - vis: geometry is result of a design decision

Dataset types

Data abstraction: Three operations

- translate from domain-specific language to generic visualization language
- identify dataset type(s), attribute types
- identify cardinality
 - how many items in the dataset?
 - what is cardinality of each attribute?
 - number of levels for categorical data
 - range for quantitative data
- consider whether to transform data
 - guided by understanding of task

Data vs conceptual models

- data model
 - mathematical abstraction
 - sets with operations, eg floats with $*$ / - +
 - variable data types in programming languages
- conceptual model
 - mental construction (semantics)
 - supports reasoning
 - typically based on understanding of tasks [stay tuned!]
- data abstraction process relies on conceptual model
 - for transforming data if needed

Data vs conceptual model, example

Data vs conceptual model, example

- data model: floats
 - 32.52, 54.06, -14.35, ...

Data vs conceptual model, example

- data model: floats
 - 32.52, 54.06, -14.35, ...
- conceptual model
 - temperature

Data vs conceptual model, example

- data model: floats
 - 32.52, 54.06, -14.35, ...
- conceptual model
 - temperature
- multiple possible data abstractions

Data vs conceptual model, example

- data model: floats
 - 32.52, 54.06, -14.35, ...
- conceptual model
 - temperature
- multiple possible data abstractions
 - continuous to 2 significant figures: quantitative
 - task: forecasting the weather

Data vs conceptual model, example

- data model: floats
 - 32.52, 54.06, -14.35, ...
- conceptual model
 - temperature
- multiple possible data abstractions
 - continuous to 2 significant figures: quantitative
 - task: forecasting the weather
 - hot, warm, cold: ordinal
 - task: deciding if bath water is ready

Data vs conceptual model, example

- data model: floats
 - 32.52, 54.06, -14.35, ...
- conceptual model
 - temperature
- multiple possible data abstractions
 - continuous to 2 significant figures: quantitative
 - task: forecasting the weather
 - hot, warm, cold: ordinal
 - task: deciding if bath water is ready
 - above freezing, below freezing: categorical
 - task: decide if I should leave the house today

Derived attributes

- derived attribute: compute from originals
 - simple change of type
 - acquire additional data
 - complex transformation

Original Data

$$\text{trade balance} = \text{exports} - \text{imports}$$

Derived Data

Analysis example: Derive one attribute

- Strahler number
 - centrality metric for trees/networks
 - derived quantitative attribute
 - draw top 5K of 500K for good skeleton

[Using Strahler numbers for real time visual exploration of huge graphs. Auber. Proc. Intl. Conf. Computer Vision and Graphics, pp. 56–69, 2002.]

Task 1

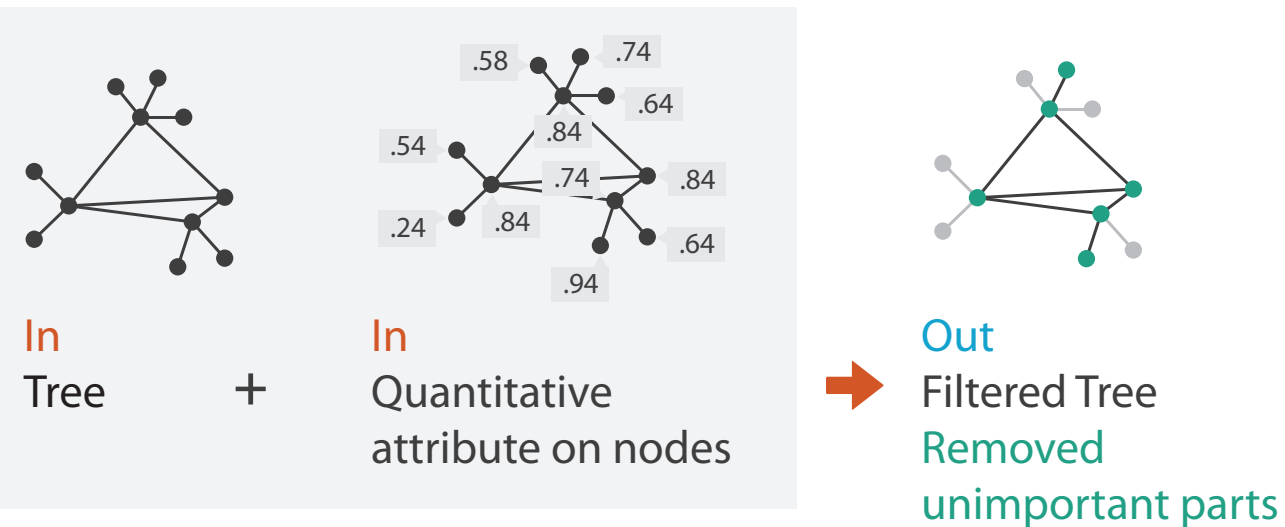

What?

- In Tree
- Out Quantitative attribute on nodes

Why?

- Derive

Task 2

What?

- In Tree
- In Quantitative attribute on nodes
- Out Filtered Tree

Why?

- Summarize
- Topology

How?

- Reduce
- Filter

What?

Visualization Analysis & Design

Task Abstraction (Ch 3)

Tamara Munzner

Department of Computer Science
University of British Columbia

[@tamaramunzner](#)

From domain to abstraction

From domain to abstraction

- domain characterization:
details of application domain

From domain to abstraction

- domain characterization:
details of application domain
 - group of users, target domain, their questions & data
 - varies wildly by domain
 - must be specific enough to get traction

From domain to abstraction

- domain characterization:
details of application domain
 - group of users, target domain, their questions & data
 - varies wildly by domain
 - must be specific enough to get traction
 - domain questions/problems
 - break down into simpler abstract tasks

From domain to abstraction

- domain characterization:
details of application domain
 - group of users, target domain, their questions & data
 - varies wildly by domain
 - must be specific enough to get traction
 - domain questions/problems
 - break down into simpler abstract tasks
- abstraction: data & task
 - map *what* and *why* into generalized terms

From domain to abstraction

- domain characterization:
details of application domain
 - group of users, target domain, their questions & data
 - varies wildly by domain
 - must be specific enough to get traction
 - domain questions/problems
 - break down into simpler abstract tasks
- abstraction: data & task
 - map *what* and *why* into generalized terms
 - identify tasks that users wish to perform, or already do
 - find data types that will support those tasks
 - possibly transform /derive if need be

Design process

Task abstraction: Actions and targets

- very high-level pattern
- {action, target} pairs
 - *discover distribution*
 - *compare trends*
 - *locate outliers*
 - *browse topology*

Task abstraction: Actions and targets

- very high-level pattern
- actions
 - analyze
 - high-level choices
 - search
 - find a known/unknown item
 - query
 - find out about characteristics of item
- {action, target} pairs
 - *discover distribution*
 - *compare trends*
 - *locate outliers*
 - *browse topology*

Task abstraction: Actions and targets

- very high-level pattern
- actions
 - analyze
 - high-level choices
 - search
 - find a known/unknown item
 - query
 - find out about characteristics of item
- targets
 - what is being acted on
- {action, target} pairs
 - *discover distribution*
 - *compare trends*
 - *locate outliers*
 - *browse topology*

Actions: Analyze

- consume
 - discover vs present
 - classic split
 - aka explore vs explain
 - enjoy
- produce
 - newcomer
 - aka casual, social
- produce
 - annotate, record
 - derive
 - crucial design choice

➔ Analyze

➔ Consume

➔ *Discover*

➔ *Present*

➔ *Enjoy*

➔ Produce

➔ *Annotate*

➔ *Record*

➔ *Derive*

Actions: Search

Actions: Search

- what does user know?
 - target, location

➔ Search

	Target known	Target unknown
Location known	 <i>Lookup</i>	 <i>Browse</i>
Location unknown	 <i>Locate</i>	 <i>Explore</i>

Actions: Search

- what does user know?
 - target, location
- lookup
 - ex: word in dictionary
 - alphabetical order

➞ Search

	Target known	Target unknown
Location known	 <i>Lookup</i>	 <i>Browse</i>
Location unknown	 <i>Locate</i>	 <i>Explore</i>

Actions: Search

- what does user know?
 - target, location
- lookup
 - ex: word in dictionary
 - alphabetical order
- locate
 - ex: keys in your house
 - ex: node in network

➔ Search

	Target known	Target unknown
Location known	 <i>Lookup</i>	 <i>Browse</i>
Location unknown	 <i>Locate</i>	 <i>Explore</i>

<https://bl.ocks.org/heybignick/3faf257bbbbc7743bb72310d03b86ee8>

Actions: Search

- what does user know?
 - target, location
- lookup
 - ex: word in dictionary
 - alphabetical order
- locate
 - ex: keys in your house
 - ex: node in network
- browse
 - ex: books in bookstore

➔ Search

	Target known	Target unknown
Location known	 <i>Lookup</i>	 <i>Browse</i>
Location unknown	 <i>Locate</i>	 <i>Explore</i>

<https://bl.ocks.org/heybignick/3faf257bbbbc7743bb72310d03b86ee8>

Actions: Search

- what does user know?
 - target, location
- lookup
 - ex: word in dictionary
 - alphabetical order
- locate
 - ex: keys in your house
 - ex: node in network
- browse
 - ex: books in bookstore
- explore
 - ex: find cool neighborhood in new city

➔ Search

	Target known	Target unknown
Location known	 <i>Lookup</i>	 <i>Browse</i>
Location unknown	 <i>Locate</i>	 <i>Explore</i>

<https://bl.ocks.org/heybignick/3faf257bbbbc7743bb72310d03b86ee8>

Actions: Query

- how much of the data matters?
 - one: identify
 - some: compare
 - all: summarize

→ Query

→ Identify

→ Compare

→ Summarize

Actions

- independent choices for each of these three levels
 - analyze, search, query
 - mix and match

Actions

➔ Analyze

➔ Consume

➔ Discover

➔ Present

➔ Enjoy

➔ Produce

➔ Annotate

➔ Record

➔ Derive

➔ Search

	Target known	Target unknown
Location known	<div><div></div></div> Lookup	<div><div></div></div> Browse
Location unknown	<div><div></div></div> Locate	<div><div></div></div> Explore

➔ Query

➔ Identify

➔ Compare

➔ Summarize

Task abstraction: Targets

Task abstraction: Targets

→ All Data

→ Trends

→ Outliers

→ Features

Task abstraction: Targets

→ All Data

→ Trends

→ Outliers

→ Features

→ Attributes

→ One

→ *Distribution*

➔ Spatial Data

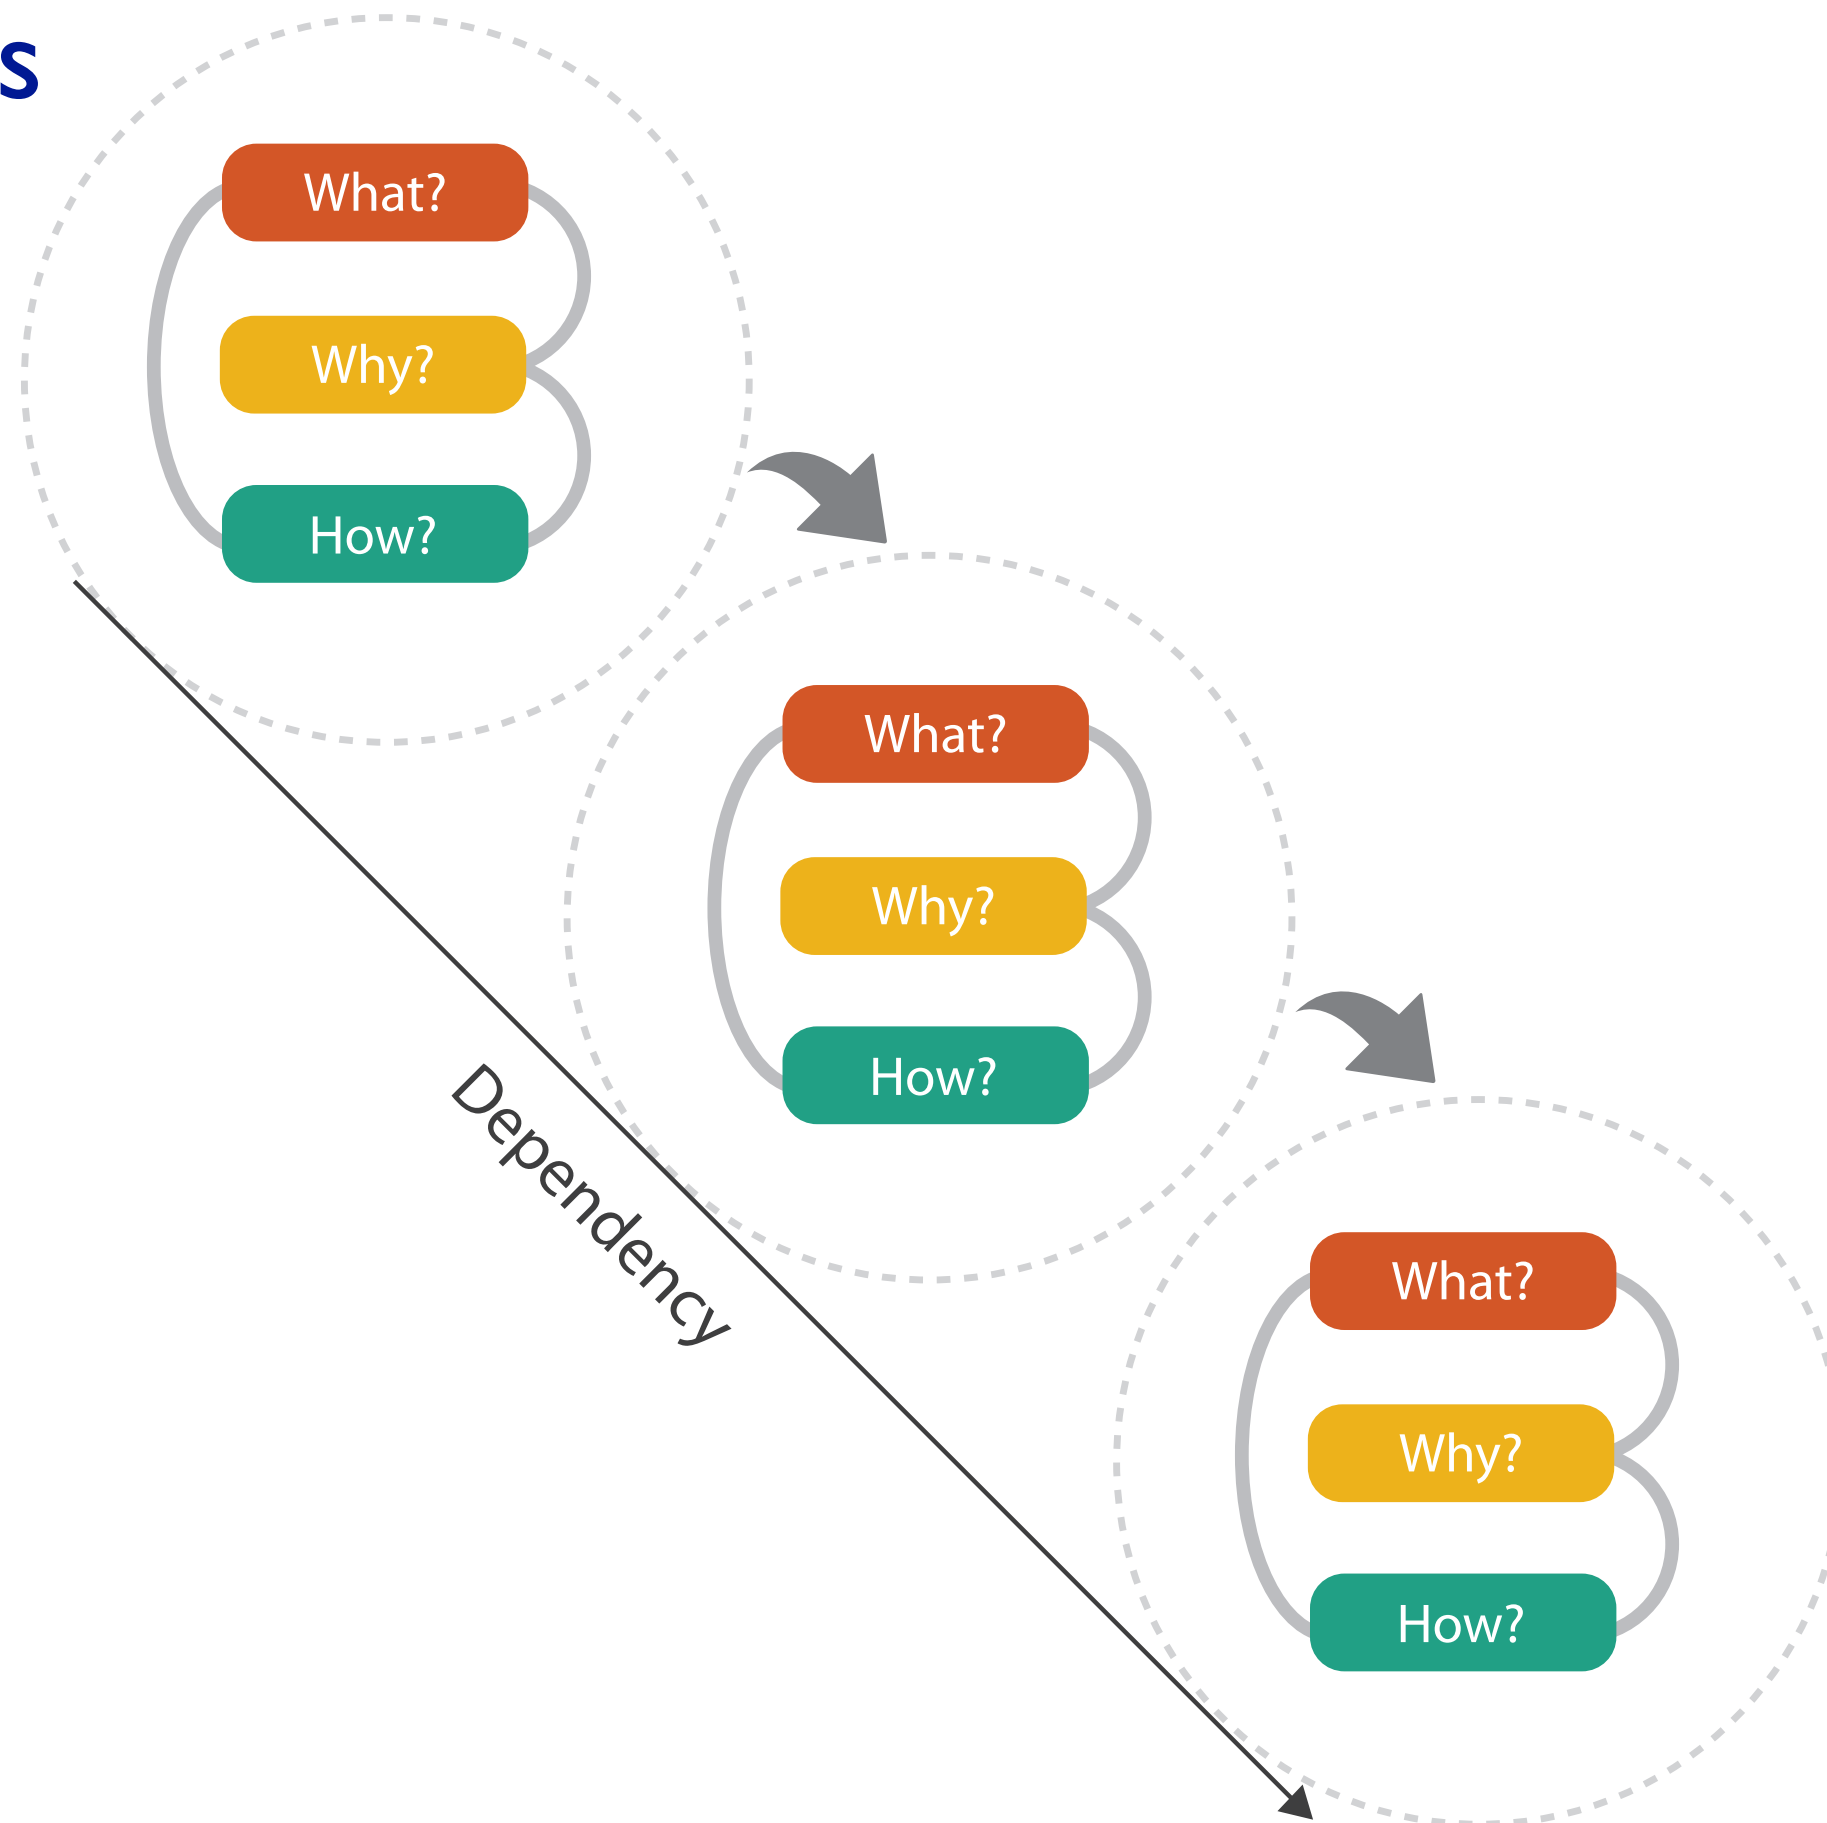

➔ Shape

Abstraction

- these {action, target} pairs are good starting point for vocabulary
 - but sometimes you'll need more precision!
- rule of thumb
 - systematically remove all domain jargon
- interplay: task and data abstraction
 - need to use data abstraction within task abstraction
 - to specify your targets!
 - but task abstraction can lead you to transform the data
 - iterate back and forth
 - first pass data, first pass task, second pass data, ...

Means and ends

👉 Actions

🎯 Targets

➔ **Analyze**

➔ Consume

➔ Discover  ➔ Present  ➔ Enjoy 

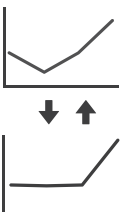

➔ Produce

➔ Annotate  ➔ Record  ➔ Derive 

➔ **Search**

	Target known	Target unknown
Location known	 <i>Lookup</i>	 <i>Browse</i>
Location unknown	 <i>Locate</i>	 <i>Explore</i>

➔ **Query**

➔ Identify  ➔ Compare  ➔ Summarize

Visualization Analysis & Design

Analysis: Nested Model (Ch 4)

Tamara Munzner

Department of Computer Science
University of British Columbia

[@tamaramunzner](#)

How to evaluate a visualization: So many methods, how to pick?

- Computational benchmarks?
 - quant: system performance, memory
- User study in lab setting?
 - quant: (human) time and error rates, preferences
 - qual: behavior/strategy observations
- Field study of deployed system?
 - quant: usage logs
 - qual: interviews with users, case studies, observations
- Analysis of results?
 - quant: metrics computed on result images
 - qual: consider what structure is visible in result images
- Justification of choices?
 - qual: perceptual principles, best practices

Analysis framework: Four levels, three questions

- *domain situation*
 - who are the target users?

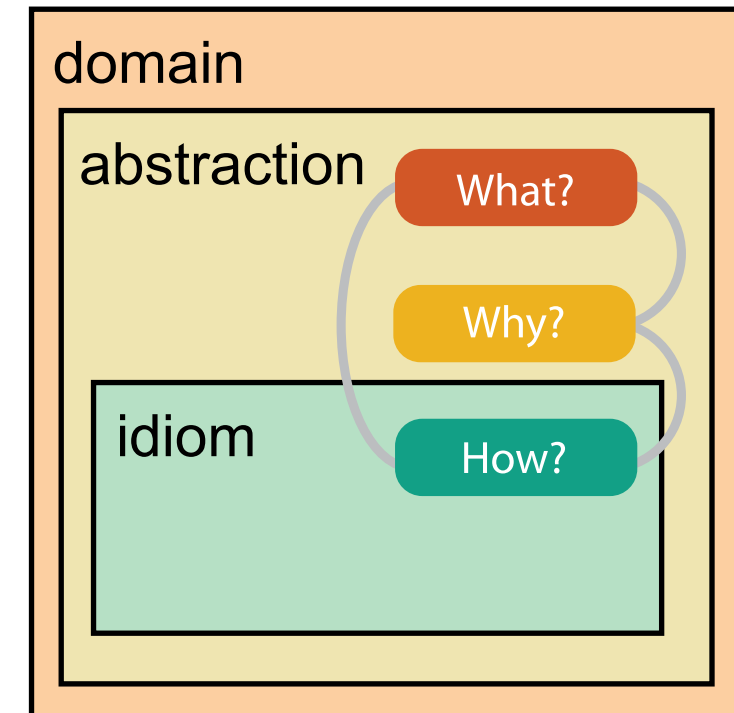

Analysis framework: Four levels, three questions

- *domain situation*
 - who are the target users?
- *abstraction*
 - translate from specifics of domain to vocabulary of vis
 - **what** is shown? **data** abstraction
 - **why** is the user looking at it? **task** abstraction

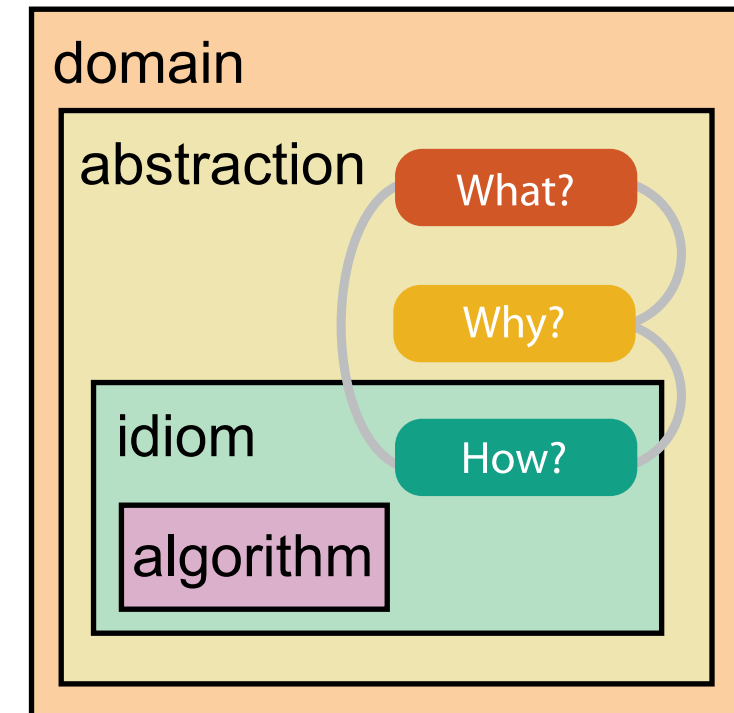

Analysis framework: Four levels, three questions

- *domain situation*
 - who are the target users?
- *abstraction*
 - translate from specifics of domain to vocabulary of vis
 - **what** is shown? **data** abstraction
 - **why** is the user looking at it? **task** abstraction
- *idiom*
 - **how** is it shown?
 - **visual encoding** idiom: how to draw
 - **interaction** idiom: how to manipulate

Analysis framework: Four levels, three questions

- *domain situation*
 - who are the target users?

Nested model

- downstream: cascading effects

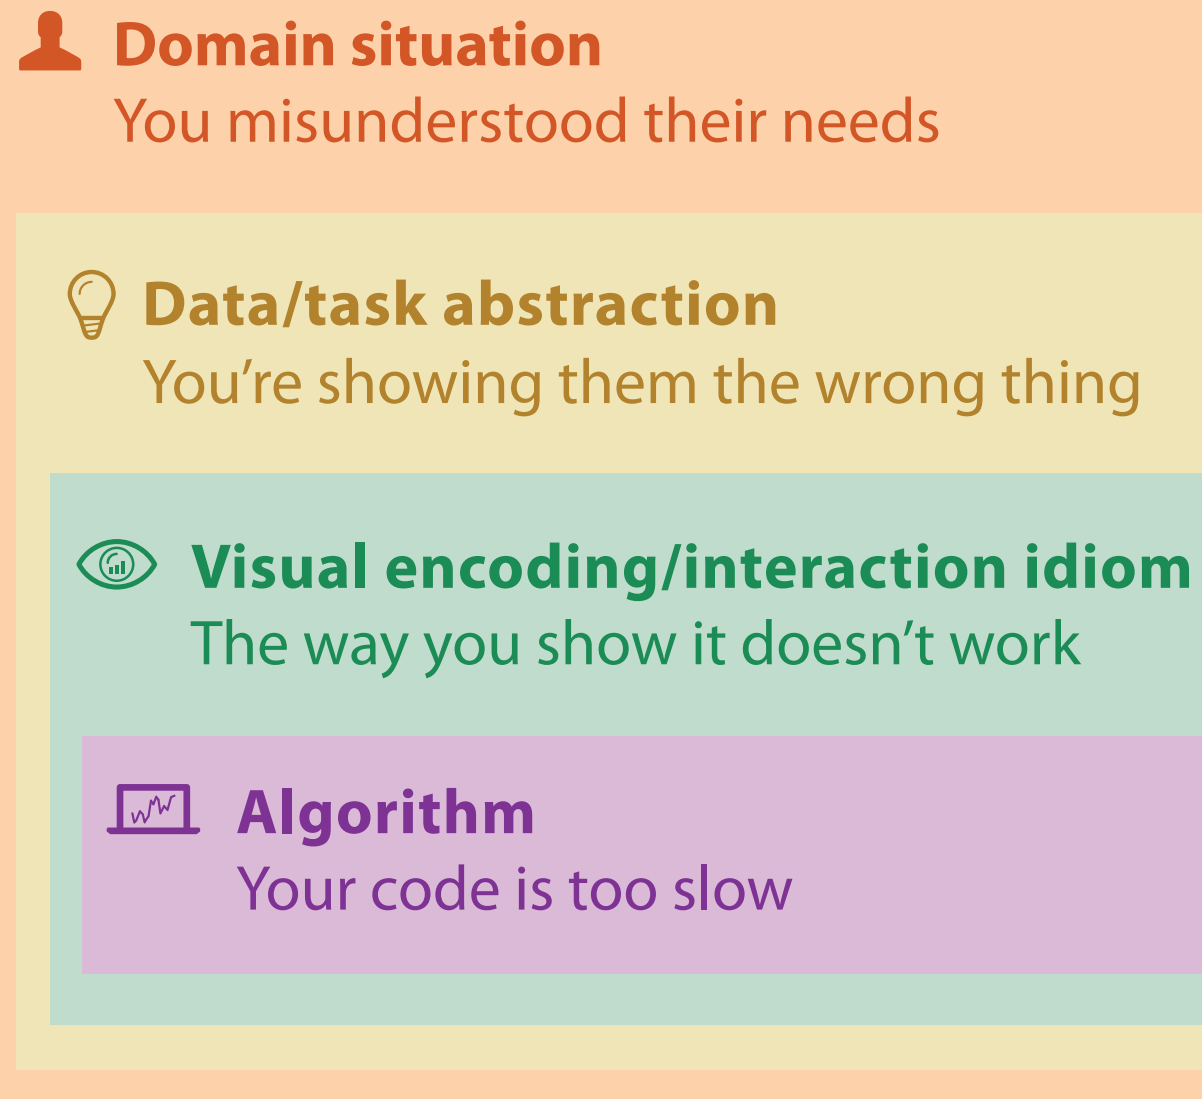

Nested model

- downstream: cascading effects
- upstream: iterative refinement

Why is validation difficult?

- different ways to get it wrong at each level

Why is validation difficult?

- solution: use methods from different fields at each level

Algorithm

Measure system time/memory

Analyze computational complexity

Why is validation difficult?

- solution: use methods from different fields at each level

computer
science

Usability

Guerilla/Discount Usability

- grab a few people and watch them use your interface
 - even 3-5 gives substantial coverage of major usability problems
 - agile/lean qualitative, vs formal quantitative user studies
 - goal is not statistical significance!
- think-aloud protocol
 - contextual inquiry (conversations back and forth) vs fly on the wall (you're silent)
