

# MulteeSum

A Tool for Comparative Spatial and Temporal Gene Expression Data

Miriah Meyer,<sup>1</sup> Tamara Munzner,<sup>2</sup> Angela DePace,<sup>3</sup> Hanspeter Pfister<sup>1</sup>

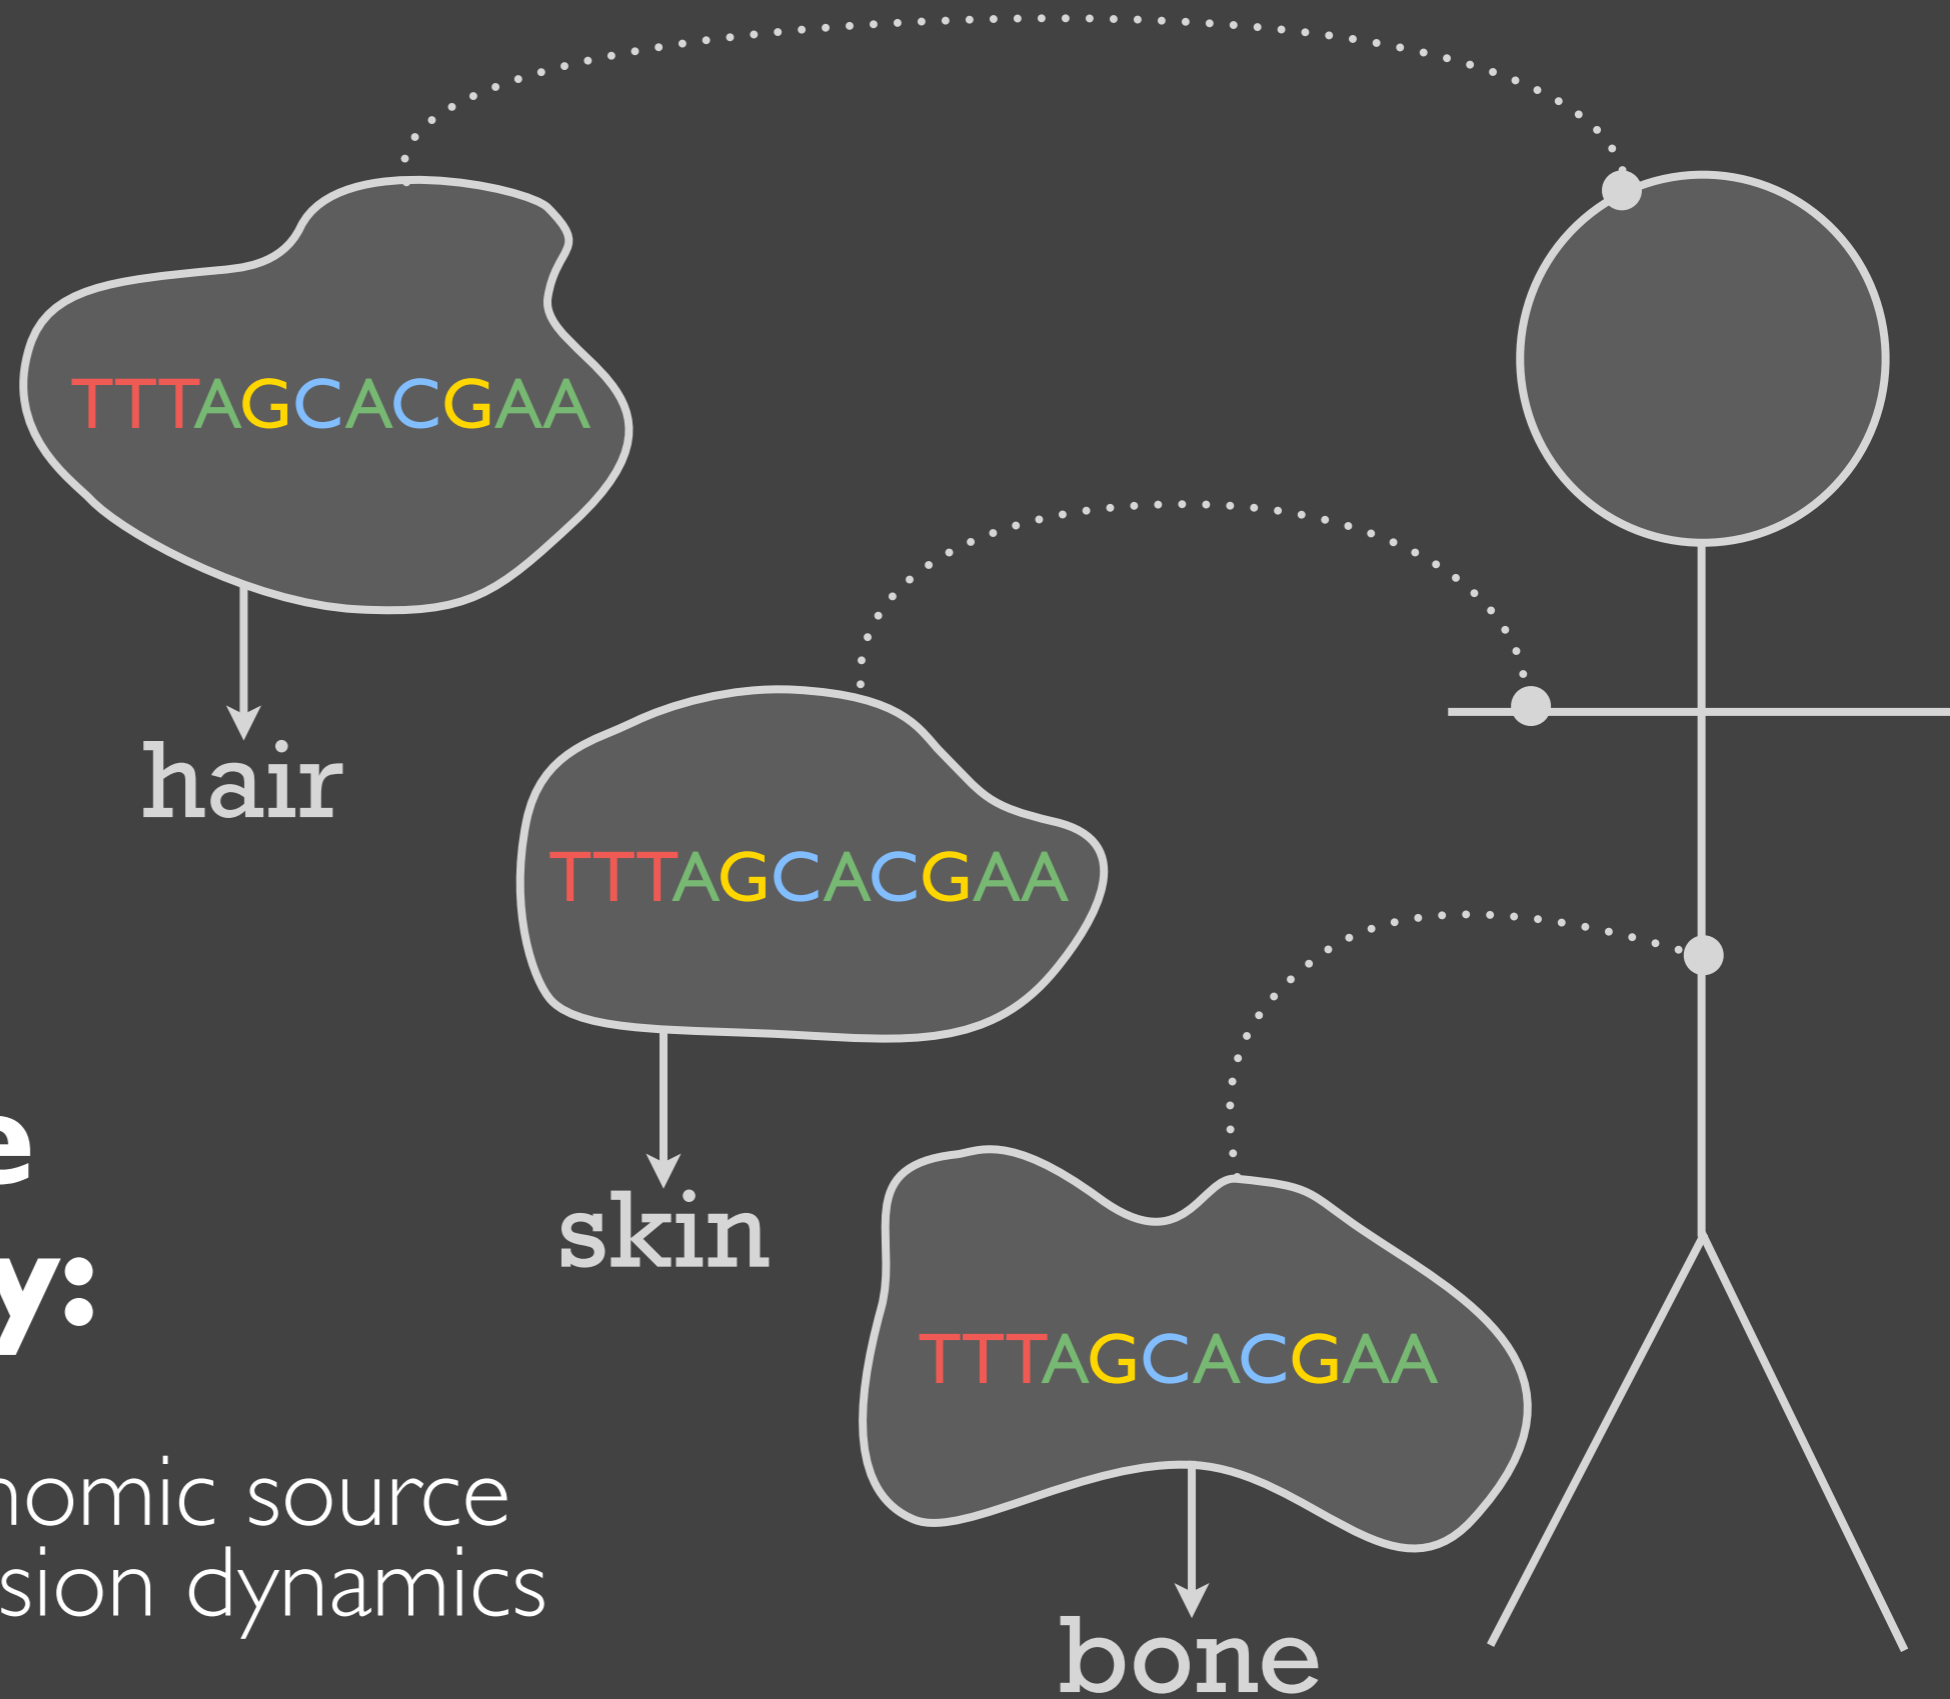

<sup>1</sup> Harvard University

<sup>2</sup> University of British Columbia

<sup>3</sup> Harvard Medical School

# grand challenge in biology:

understand genomic source of gene expression dynamics

**collaborators:** DePace lab at Harvard Medical School

**model species:** fruit fly

**scientific goal:** link changes in the regulatory part of the genome to species variation

**requires:** characterize differences in gene expression patterns between species

**MulteeSum**

# process

two year collaboration

two early prototype systems

feedback from six biologists

*informal interviews, emails*

*one day a week in biology lab*

tool deployed

*currently used several times a week*

data & tool & tasks

summaries & groups

encodings & interaction

conclusions

## gene expression

*... the measured level of how much a gene is on or off.*

*... a single quantitative value.*

## collaborators measure it ...

*... for multiple time points.*

*... for multiple genes.*

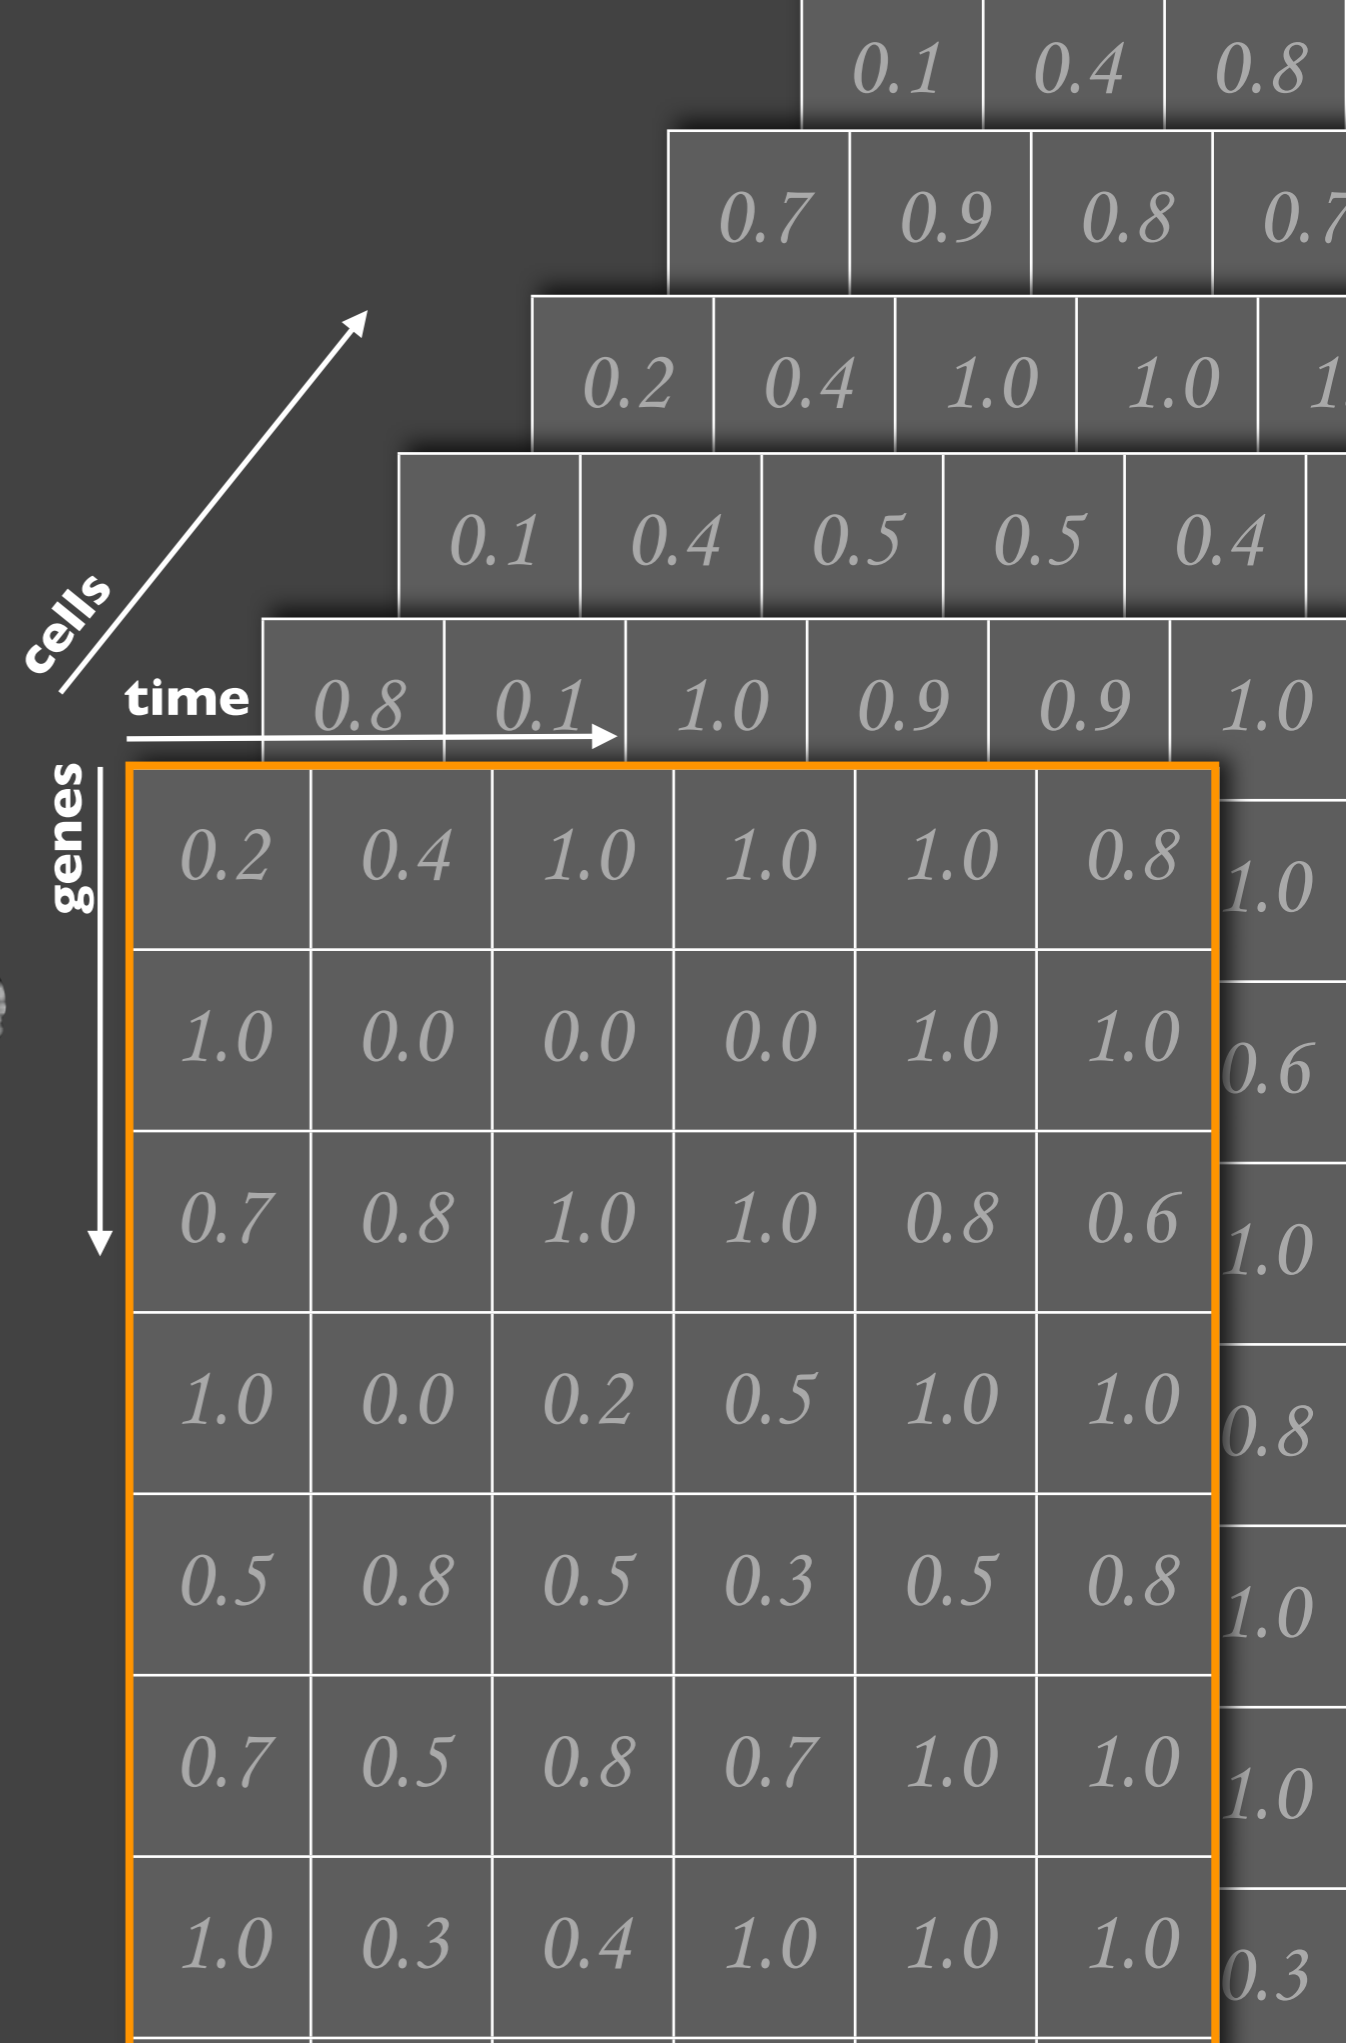

*... in many cells.*

**measurements taken for every cell in a single fruit fly embryo.**

**correlate gene expression with spatial location.**

# virtual embryo

**several thousand cells**  
[5,000 ± 1,000]

each cell has:

**expression profile**  
[6 time points x 50 genes]

**spatial position**  
[3D and 2D coordinates]

**12 related species**  
one complete  
three preliminary

AGGREGATION GROUP | CREATED GROUP

Two scatter plots. The left one shows a distribution of points with a color scale from 0.33 to 2.48. The right one shows a distribution of points with a color scale from 1.2 to 2.5.

# summaries

## Summaries

## Embryo Map

# Characterize differences in gene expression patterns between species.

differences related to:

*spatial position*

*gene expression profiles*

*complex combination*

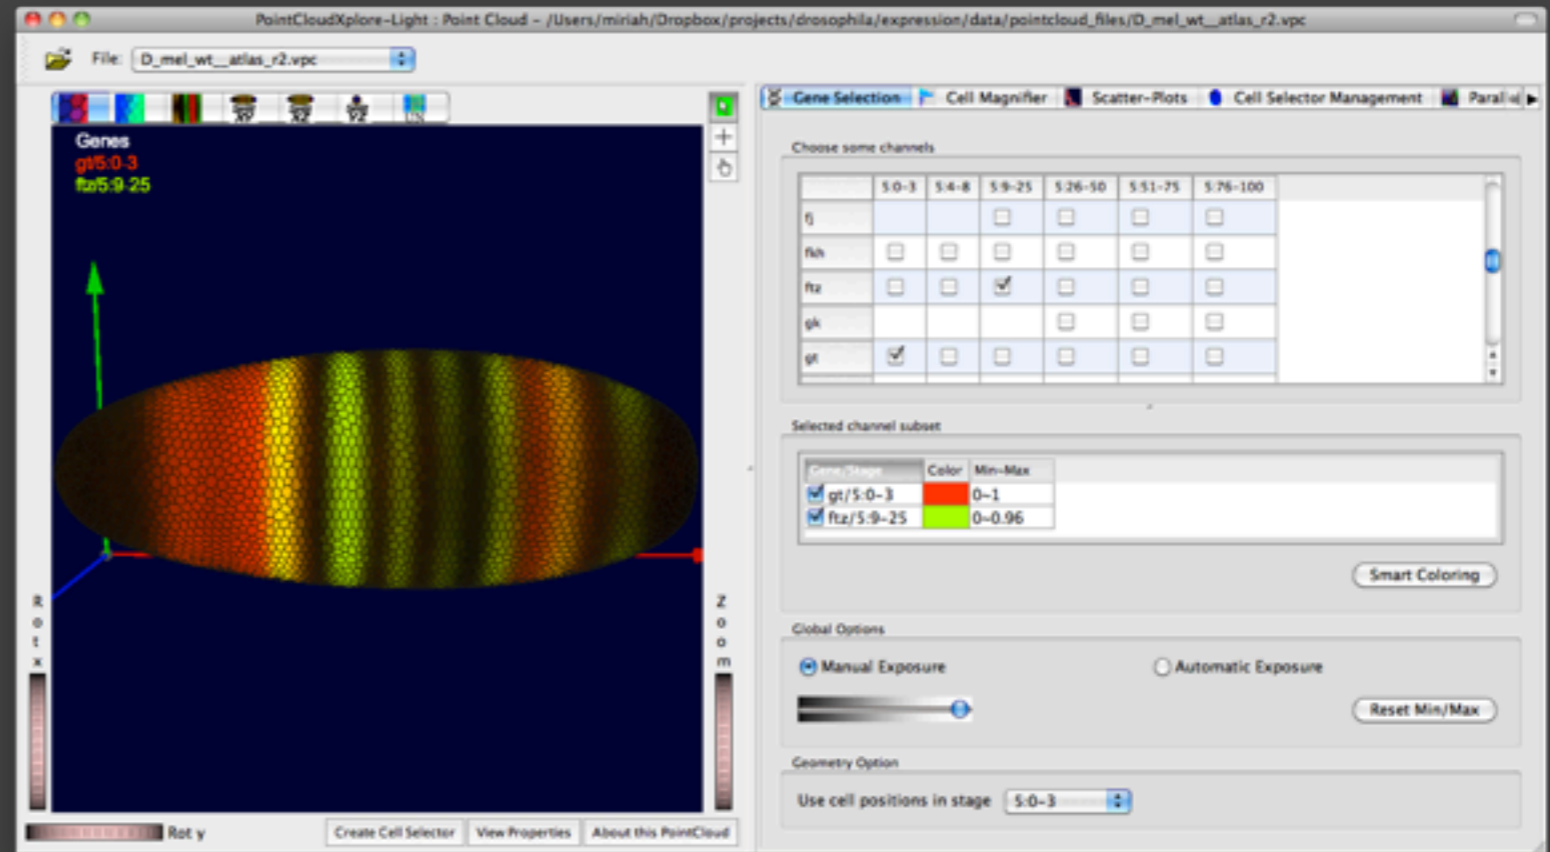

challenging to characterize manually

support mechanisms:

*summaries, groups*

# previous work

PointCloudXplore  
[Rübel06][Weber09][Rübel10]

*selection:* multiple genes  $\neq$  single gene  
single time point multiple time points

*encodes:* a few genes for all of the cells all the genes for a few cells

*supports:* a single virtual embryo multiple virtual embryos

AGGREGATION GROUP | CREATED GROUP

A section titled 'Curvemap' containing a scatter plot of metric values (0.33 to 0.81) and a line graph of metric value (1.2 to 2.5). Below is a grid of gene expression profiles for genes: eve, fkh, ftz, gt, hb, hkb, kni, Kr, odd, prd. The first row is for 'dmel.r2 3932' and subsequent rows are for various 'dpse.rc3' cells. A legend at the bottom shows 'all' and 'remove' buttons and a scale from 0.0 to 1.0.

data & tool & tasks

summaries & groups

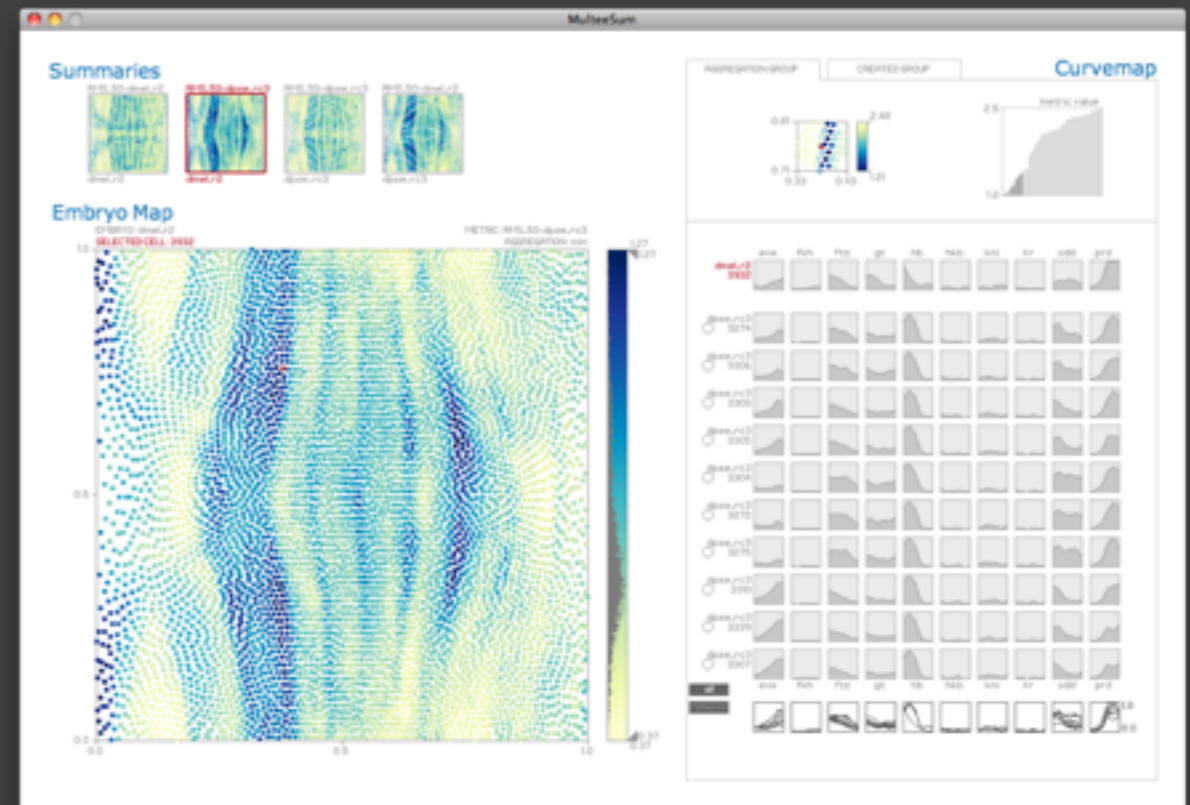

encodings & interaction

**conclusions**

# contributions

## MulteeSum

spatial and temporal gene expression data from multiple species

## workflow

visualization supports upstream computation via summaries

## validation

case studies, deployment

Cellular resolution comparison of gene expression in *Drosophila* reveals coordinated shifts in the segmentation network.

*DePace et. al, in preparation.*

# future work

## design is broadly applicable

consider: scalability of curvemap

consider: mapping of other spatial data to 2D

## continuing to support collaborators

additional features in MulteeSum

new summary designs
