**Masters of Management in
Operations Research Info Session**

Date: Tues. Nov 20

Time: 12 – 1 pm

Location: Kaiser 2020/2030,
2332 Main Mall

Grad School Panel

Date: Thurs. Nov 22

Time: 12:30 – 2 pm

Location: Rm X836, ICICS/CS Bldg.

Volunteer for Experience Science Day

Date: Fri. Nov 23

Time: 10 – 11 am or

11 am – 12 pm or

1 – 2 pm

Location: ICICS/CS Bldg.

RSVP: Email undergrad-info@cs.ubc.ca
if you are interested.

Reasoning Under Uncertainty: Variable elimination

Computer Science cpsc322, Lecture 30

(Textbook Chpt 6.4)

Nov, 19, 2012

 **Couple of questions with cards**

Lecture Overview

- Recap Intro Variable Elimination
- Variable Elimination
 - Simplifications
 - Example
 - Independence
- Where are we?

Bnet Inference: General

- Suppose the variables of the belief network are X_1, \dots, X_n
- Z is the query variable
- $Y_1 = v_1, \dots, Y_j = v_j$ are the observed variables (with their values)
- Z_1, \dots, Z_k are the remaining variables

• What we want to compute: $P(Z | Y_1 = v_1, \dots, Y_j = v_j)$

• We can actually compute: $P(Z, Y_1 = v_1, \dots, Y_j = v_j)$

$$\underbrace{P(Z | Y_1 = v_1, \dots, Y_j = v_j)}_{\text{Want to Compute}} = \frac{P(Z, Y_1 = v_1, \dots, Y_j = v_j)}{\underbrace{P(Y_1 = v_1, \dots, Y_j = v_j)}_{\text{Actual Computation}}} = \frac{P(Z, Y_1 = v_1, \dots, Y_j = v_j)}{\sum_z P(Z, Y_1 = v_1, \dots, Y_j = v_j)}$$

Inference with Factors

We can compute $P(Z, Y_1=v_1, \dots, Y_j=v_j)$ by

- expressing the joint as a factor,

$$f(Z, Y_1, \dots, Y_j, Z_1, \dots, Z_k)$$

- assigning $Y_1=v_1, \dots, Y_j=v_j$
- and summing out the variables Z_1, \dots, Z_k

$$P(Z, Y_1 = v_1, \dots, Y_j = v_j) = \sum_{Z_k} \dots \sum_{Z_1} f(Z, Y_1, \dots, Y_j, Z_1, \dots, Z_k) \Big|_{Y_1=v_1, \dots, Y_j=v_j}$$

Variable Elimination Intro (1)

$$\underbrace{P(Z, Y_1 = v_1, \dots, Y_j = v_j)}_{\text{Original Expression}} = \sum_{Z_k} \dots \sum_{Z_1} \underbrace{f(Z, Y_1, \dots, Y_j, Z_1, \dots, Z_k)}_{f(\dots|Y_1=v_1, \dots, Y_j=v_j)}$$

- Using the chain rule and the definition of a Bnet, we can write $\underbrace{P(X_1, \dots, X_n)}_n$ as $\prod_{i=1}^n P(X_i | pX_i)$

- We can express the joint factor as a product of factors

$$f(Z, \underbrace{Y_1, \dots, Y_j, \dots, Z_1, \dots, Z_j}_{\text{Original Expression}})$$

$$\prod_{i=1}^n f(X_i, pX_i)$$

$$\underbrace{P(Z, Y_1 = v_1, \dots, Y_j = v_j)}_{\text{Original Expression}} = \sum_{Z_k} \dots \sum_{Z_1} \underbrace{\prod_{i=1}^n f(X_i, pX_i)}_{f(\dots|Y_1=v_1, \dots, Y_j=v_j)}$$

Variable Elimination Intro (2)

Inference in belief networks thus reduces to computing “the sums of products....”

$$P(Z, Y_1 = v_1, \dots, Y_j = v_j) = \sum_{Z_k} \dots \sum_{Z_1} \prod_{i=1}^n f(X_i, pX_i) \quad (2)$$

$Y_1 = v_1, \dots, Y_j = v_j$

Annotations:

- ④ Above the first summation symbol.
- ③ Above the second summation symbol.
- ① Above the product symbol.
- ② To the right of the product symbol.
- A bracket under the first summation symbol spans from Z_k to Z_1 .
- A bracket under the entire expression spans from $P(Z, Y_1 = v_1, \dots, Y_j = v_j)$ to the product term.

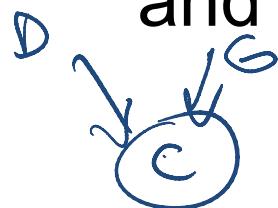

1. Construct a factor for each conditional probability.
2. In each factor assign the observed variables to their observed values.
3. Multiply the factors
4. For each of the other variables $Z_i \in \{Z_1, \dots, Z_k\}$, sum out Z_i

Lecture Overview

- Recap Intro Variable Elimination
- Variable Elimination
 - Simplifications
 - Example
 - Independence
- Where are we?

How to simplify the Computation?

- Assume we have turned the CPTs into factors and performed the assignments

$$f(X_i, pX_i) \rightarrow f(\text{vars}X_i)$$

$$P(C|DG) \underbrace{f(C, D, G)}_{G=t} \rightarrow ? \quad f(C, D)$$

$$\sum_{Z_k} \cdots \sum_{Z_1} \prod_{i=1}^n f(X_i, pX_i)_{Y_1=v_1, \dots, Y_j=v_j} \xrightarrow{\text{blue arrow}} \sum_{Z_k} \cdots \sum_{Z_1} \prod_{i=1}^n f(\text{vars}X_i)$$

Let's focus on the basic case, for instance...

$$\sum_A f(C, D) \times f(A, B, D) \times f(E, A) \times f(D)$$

How to simplify: basic case

Let's focus on the basic case.

$$\sum_{Z_1} \prod_{i=1}^n f(\text{varsX}_i)$$

$$\sum_A f(C, D) \times f(A, B, D) \times f(E, A) \times f(D)$$

- How can we compute efficiently?

Factor out those terms that don't involve Z_1 !

$$\left(\prod_{i|Z_1 \notin \text{varsX}_i} f(\text{varsX}_i) \right) \times \left(\sum_{Z_1} \prod_{i|Z_1 \in \text{varsX}_i} f(\text{varsX}_i) \right)$$

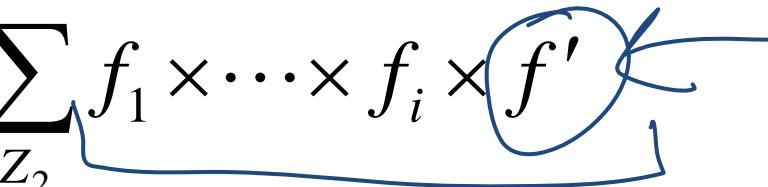

do not contain Z_1 *do contain*

$$f(C, D) \times f(D) \times \sum_A f(A, B, D) \times f(E, A)$$

General case: Summing out variables efficiently

$$\sum_{Z_k} \cdots \sum_{Z_1} \underbrace{f_1 \times \cdots \times f_h}_{\text{factors}} = \sum_{Z_k} \cdots \sum_{Z_2} (f_1 \times \cdots \times f_i) \left(\sum_{Z_1} \underbrace{f_{i+1} \times \cdots \times f_h}_{\text{factors}} \right)$$

$\sum_{Z_k} \cdots \sum_{Z_2} f_1 \times \cdots \times f_i \times f'$

Now to sum out a variable Z_2 from a product $f_1 \times \dots \times f_i \times f'$ of factors, again partition the factors into two sets

- F: those that contain Z_2
- F: those that do not

$$\overline{\prod}_F \times \sum_{Z_2} \overline{\prod}^A_F$$

Analogy with “Computing sums of products”

This simplification is similar to what you can do in basic algebra with *multiplication* and *addition*

- It takes 14 multiplications or additions to evaluate the expression

$$\underline{a b + a c + a d + a e h + a f h + a g h.}$$

- This expression be evaluated more efficiently....

$$a*(b + c + d. + h*(e + f + g)) \quad \text{7 operations}$$

Variable elimination ordering

Is there only one way to simplify?

$$P(G, D=t) = \underbrace{\sum_{A,B,C} f(A,G) f(B,A) f(C,G) f(B,C)}$$

CBA

$$P(G, D=t) = \underbrace{\sum_A f(A,G)}_{\text{C}} \underbrace{\sum_B f(B,A)}_{\text{B}} \underbrace{\sum_C f(C,G) f(B,C)}_{\text{A}}$$

BCA

$$P(G, D=t) = \underbrace{\sum_A f(A,G)}_{\text{B}} \underbrace{\sum_C f(C,G)}_{\text{C}} \underbrace{\sum_B f(B,C) f(B,A)}_{\text{A}}$$

Variable elimination algorithm: Summary

$$P(Z, \overline{Y_1, \dots, Y_j}, \overline{Z_1, \dots, Z_j})$$

To compute $P(Z | Y_1=v_1, \dots, Y_j=v_j)$:

1. Construct a factor for each conditional probability.
2. Set the observed variables to their observed values.
3. Given an elimination ordering, simplify/decompose sum of products
4. Perform products and sum out Z_i $Y_1=v_1$ Z
5. Multiply the remaining factors (all in ? Y_2 Z_2)
6. Normalize: divide the resulting factor $f(Z)$ by $\sum_Z f(Z)$.

Variable elimination algorithm: Summary

$$P(Z, \overline{Y_1, \dots, Y_j}, \overline{Z_1, \dots, Z_j})$$

To compute $P(Z | Y_1=v_1, \dots, Y_j=v_j)$:

1. Construct a factor for each conditional probability.
2. Set the observed variables to their observed values.
3. Given an elimination ordering, simplify/decompose sum of products
4. Perform products and sum out Z_i
5. Multiply the remaining factors (all in ? Z)
6. Normalize: divide the resulting factor $f(Z)$ by $\sum_Z f(Z)$.

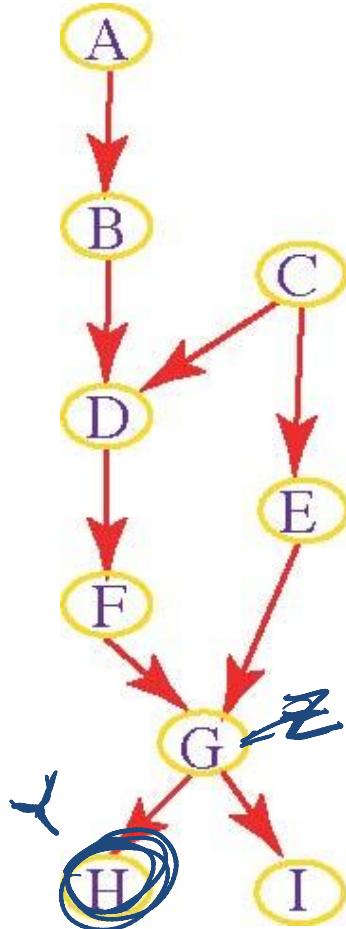

Lecture Overview

- Recap Intro Variable Elimination
- Variable Elimination
 - Simplifications
 - Example
 - Independence
- Where are we?

Variable elimination example

Compute $P(G | H=h_1)$.

- $\underline{P(G,H) = \sum_{A,B,C,D,E,F,I} P(A,B,C,D,E,F,G,H,I)}$

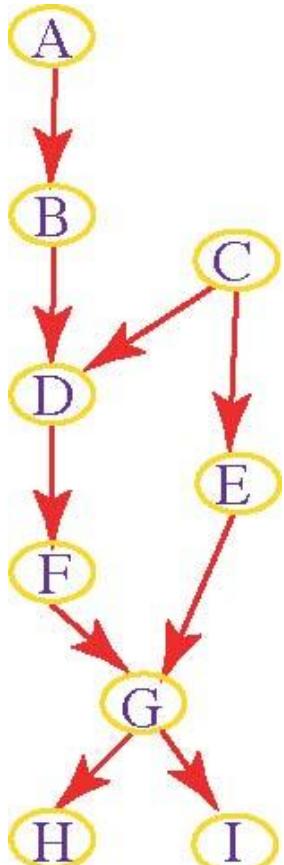

Variable elimination example

Compute $P(G | H=h_1)$.

- $P(G, H) = \sum_{A,B,C,D,E,F,I} \underline{P(A,B,C,D,E,F,G,H,I)}$

Chain Rule + Conditional Independence:

$$P(G, H) = \sum_{A,B,C,D,E,F,I} \underline{P(A)P(B|A)P(C)P(D|B,C)P(E|C)P(F|D)P(G|F,E)P(H|G)P(I|G)}$$

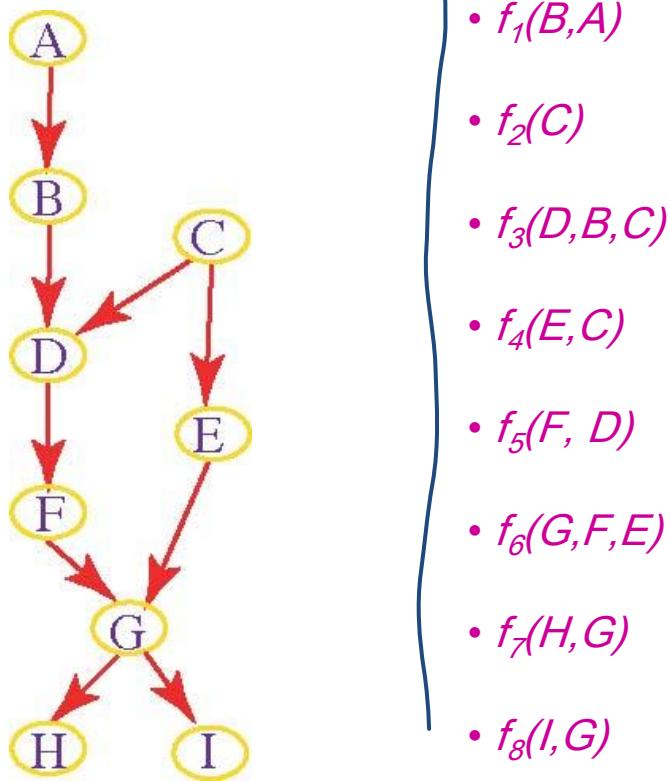

Variable elimination example (step1)

Compute $P(G | H=h_1)$.

- $P(G, H) = \sum_{A,B,C,D,E,F,I} P(A)P(B|A)P(C)P(D|B,C)P(E|C)P(F|D)P(G|F,E)P(H|G)P(I|G)$

Factorized Representation:

$$P(G, H) = \sum_{A,B,C,D,E,F,I} f_0(A) f_1(B,A) f_2(C) f_3(D,B,C) f_4(E,C) f_5(F, D) f_6(G,F,E) f_7(H,G) f_8(I,G)$$

- $f_0(A)$
- $f_1(B,A)$
- $f_2(C)$
- $f_3(D,B,C)$
- $f_4(E,C)$
- $f_5(F, D)$
- $f_6(G,F,E)$
- $f_7(H,G)$
- $f_8(I,G)$

Variable elimination example (step 2)

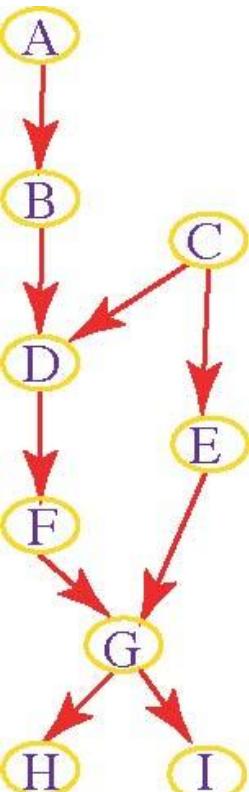

Compute $P(G | H=h_1)$.

Previous state:

$$P(G, H) = \sum_{A,B,C,D,E,F,I} f_0(A) f_1(B,A) f_2(C) f_3(D,B,C) f_4(E,C) f_5(F, D) f_6(G,F,E) \underline{f_7(H,G)} f_8(I,G)$$

Observe H:

$$P(G, H=h_1) = \sum_{A,B,C,D,E,F,I} f_0(A) f_1(B,A) f_2(C) f_3(D,B,C) f_4(E,C) f_5(F, D) f_6(G,F,E) \underline{f_9(G)} f_8(I,G)$$

- $f_0(A)$
- $f_1(B,A)$
- $f_2(C)$
- $f_3(D,B,C)$
- $f_4(E,C)$
- $f_5(F, D)$
- $f_6(G,F,E)$
- $\underline{f_7(H,G)}$
- $f_8(I,G)$

Variable elimination example (steps 3-4)

Compute $P(G | H=h_1)$.

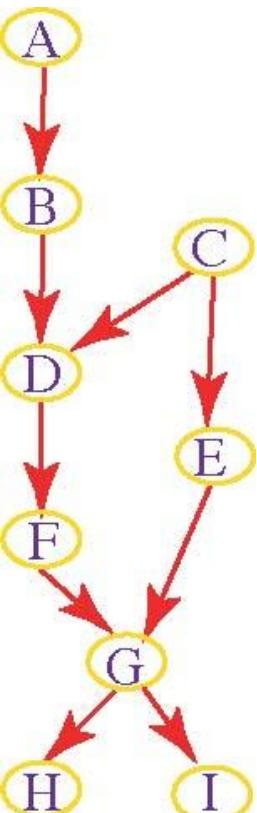

Previous state:

$$P(G, H) = \sum_{A,B,C,D,E,F,I} f_0(A) f_1(B,A) f_2(C) f_3(D,B,C) f_4(E,C) f_5(F, D) f_6(G,F,E) f_9(G) f_8(I, G)$$

Elimination ordering A, C, E, I, B, D, F :

$$P(G, H=h_1) = f_9(G) \sum_F \sum_D f_5(F, D) \sum_B \sum_I f_8(I, G) \underbrace{\sum_E f_6(G, F, E)}_{\sum_C f_2(C) f_3(D, B, C) f_4(E, C)} \underbrace{\sum_A f_0(A) f_1(B, A)}$$

- $f_0(A)$
- $f_9(G)$
- $f_1(B, A)$
- $f_2(C)$
- $f_3(D, B, C)$
- $f_4(E, C)$
- $f_5(F, D)$
- $f_6(G, F, E)$
- $f_7(H, G)$
- $f_8(I, G)$

Variable elimination example(steps 3-4)

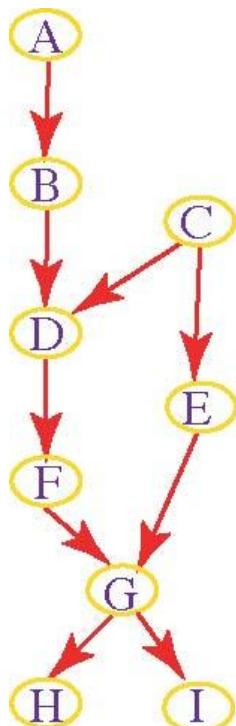

Compute $P(G | H=h_1)$. Elimination ordering A, C, E, I, B, D, F .

Previous state:

$$P(G, H=h_1) = f_g(G) \sum_F \sum_D f_5(F, D) \sum_B \sum_I f_8(I, G) \sum_E f_6(G, F, E) \sum_C f_2(C) f_3(D, B, C) f_4(E, C) \sum_A \underline{f_0(A)} \underline{f_1(B, A)}$$

Eliminate A:

$$P(G, H=h_1) = f_g(G) \sum_F \sum_D f_5(F, D) \underline{\sum_B f_{10}(B)} \sum_I f_8(I, G) \underline{\sum_E f_6(G, F, E)} \underline{\sum_C f_2(C)} f_3(D, B, C) f_4(E, C)$$

- $f_0(A)$
- $f_1(B, A)$
- $f_2(C)$
- $f_3(D, B, C)$
- $f_4(E, C)$
- $f_5(F, D)$
- $f_6(G, F, E)$
- $f_7(H, G)$
- $f_8(I, G)$

- $f_g(G)$
- $f_{10}(B)$

Variable elimination example(steps 3-4)

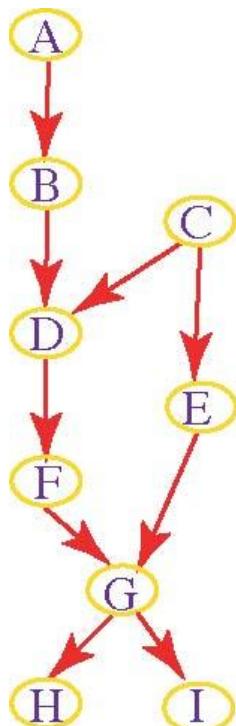

Compute $P(G | H=h_1)$. Elimination ordering A, C, E, I, B, D, F .

Previous state:

$$P(G, H=h_1) = f_g(G) \sum_F \sum_D f_5(F, D) \sum_B f_{10}(B) \sum_I f_8(I, G) \sum_E f_6(G, F, E) \underbrace{\sum_C f_2(C)}_{f_3(D, B, C)} f_4(E, C)$$

Eliminate C:

$$P(G, H=h_1) = f_g(G) \sum_F \sum_D f_5(F, D) \sum_B f_{10}(B) \sum_I f_8(I, G) \cancel{\sum_E f_6(G, F, E)} \underbrace{f_{12}(B, D, E)}$$

- $f_0(A)$
- $f_1(B, A)$
- $f_2(C)$
- $f_3(D, B, C)$
- $f_4(E, C)$
- $f_5(F, D)$
- $f_6(G, F, E)$
- $f_7(H, G)$
- $f_8(I, G)$
- $f_9(G)$
- $f_{10}(B)$
- $f_{12}(B, D, E)$

Variable elimination example(steps 3-4)

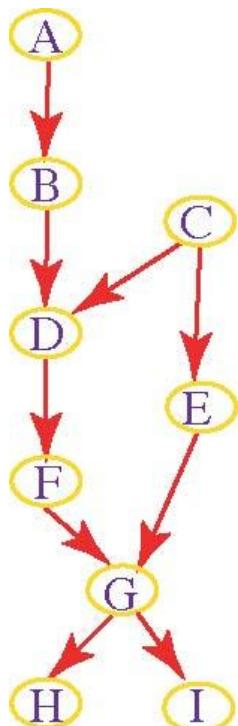

Compute $P(G | H=h_1)$. Elimination ordering A, C, E, I, B, D, F .

Previous state:

$$P(G, H=h_1) = f_g(G) \sum_F \sum_D f_5(F, D) \sum_B f_{10}(B) \sum_I f_8(I, G) \sum_E f_6(G, F, E) f_{12}(B, D, E)$$

Eliminate E:

$$P(G, H=h_1) = f_g(G) \sum_F \sum_D f_5(F, D) \sum_B f_{10}(B) f_{13}(B, D, F, G) \sum_I f_8(I, G)$$

- $f_0(A)$
- $f_1(B, A)$
- $f_2(C)$
- $f_3(D, B, C)$
- $f_4(E, C)$
- $f_5(F, D)$
- $f_6(G, F, E)$
- $f_7(H, G)$
- $f_8(I, G)$
- $f_9(G)$
- $f_{10}(B)$
- $f_{12}(B, D, E)$
- $f_{13}(B, D, F, G)$

Variable elimination example(steps 3-4)

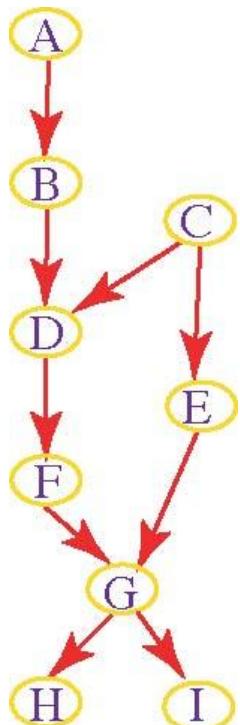

Compute $P(G | H=h_1)$. Elimination ordering A, C, E, I, B, D, F .

Previous state: $P(G, H=h_1) = f_9(G) \sum_F \sum_D f_5(F, D) \sum_B f_{10}(B) f_{13}(B, D, F, G) \underline{\sum_I f_8(I, G)}$

Eliminate I:

$$P(G, H=h_1) = f_9(G) \underline{f_{14}(G)} \sum_F \sum_D f_5(F, D) \sum_B f_{10}(B) f_{13}(B, D, F, G)$$

- $f_0(A)$
- $f_1(B, A)$
- $f_2(C)$
- $f_3(D, B, C)$
- $f_4(E, C)$
- $f_5(F, D)$
- $f_6(G, F, E)$
- $f_7(H, G)$
- $f_8(I, G)$
- $f_9(G)$
- $f_{10}(B)$
- $f_{12}(B, D, E)$
- $f_{13}(B, D, F, G)$
- $f_{14}(G)$

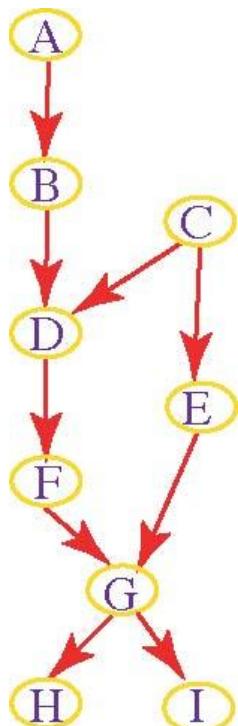

Variable elimination example(steps 3-4)

Compute $P(G | H=h_1)$. Elimination ordering A, C, E, I, B, D, F .

Previous state: $P(G, H=h_1) = f_g(G) f_{14}(G) \sum_F \sum_D f_5(F, D) \sum_B f_{10}(B) f_{13}(B, D, F, G)$

Eliminate B:

$P(G, H=h_1) = f_g(G) f_{14}(G) \sum_F \sum_D f_5(F, D) f_{15}(D, F, G)$

- $f_0(A)$
- $f_1(B, A)$
- $f_2(C)$
- $f_3(D, B, C)$
- $f_4(E, C)$
- $f_5(F, D)$
- $f_6(G, F, E)$
- $f_7(H, G)$
- $f_8(I, G)$
- $f_9(G)$
- $f_{10}(B)$
- $f_{12}(B, D, E)$
- $f_{13}(B, D, F, G)$
- $f_{14}(G)$
- $f_{15}(D, F, G)$

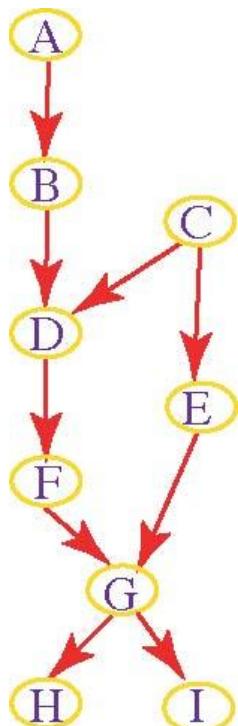

Variable elimination example(steps 3-4)

Compute $P(G | H=h_1)$. Elimination ordering A, C, E, I, B, D, F .

Previous state: $P(G, H=h_1) = f_g(G) f_{14}(G) \sum_F \sum_D f_5(F, D) f_{15}(D, F, G)$

Eliminate D:

$$P(G, H=h_1) = f_g(G) f_{14}(G) \sum_F f_{16}(F, G)$$

- $f_0(A)$
- $f_1(B, A)$
- $f_2(C)$
- $f_3(D, B, C)$
- $f_4(E, C)$
- $f_5(F, D)$
- $f_6(G, F, E)$
- $f_7(H, G)$
- $f_8(I, G)$
- $f_9(G)$
- $f_{10}(B)$
- $f_{12}(B, D, E)$
- $f_{13}(B, D, F, G)$
- $f_{14}(G)$
- $f_{15}(D, F, G)$
- $f_{16}(F, G)$

Variable elimination example(steps 3-4)

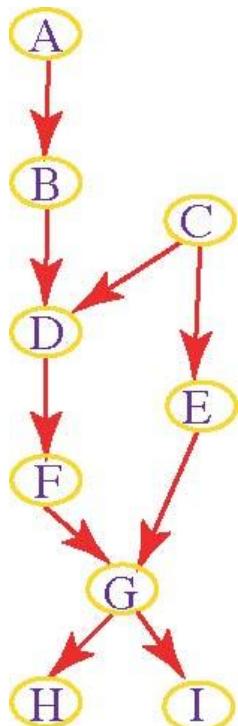

Compute $P(G | H=h_1)$. Elimination ordering A, C, E, I, B, D, F .

Previous state: $P(G, H=h_1) = f_9(G) f_{14}(G) \sum_F f_{16}(F, G)$

Eliminate F:

$$P(G, H=h_1) = [f_9(G) f_{14}(G) f_{17}(G)]$$

- $f_9(G)$
- $f_0(A)$
- $f_1(B, A)$
- $f_2(C)$
- $f_3(D, B, C)$
- $f_4(E, C)$
- $f_5(F, D)$
- $f_6(G, F, E)$
- $f_7(H, G)$
- $f_8(I, G)$
- $f_{10}(B)$
- $f_{12}(B, D, E)$
- $f_{13}(B, D, F, G)$
- $f_{14}(G)$
- $f_{15}(D, F, G)$
- $f_{16}(F, G)$
- $f_{17}(G)$

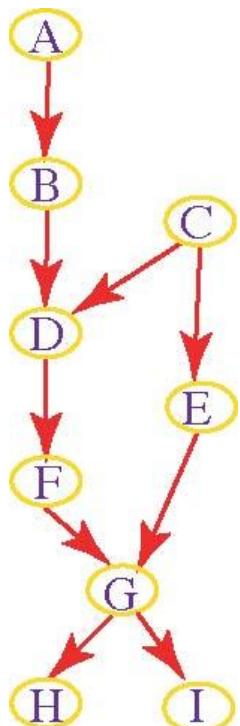

Variable elimination example (step 5)

Compute $P(G | H=h_1)$. Elimination ordering A, C, E, I, B, D, F .

Previous state: $P(G, H=h_1) = f_9(G) f_{14}(G) f_{17}(G)$

Multiply remaining factors:

$$P(G, H=h_1) = f_{18}(G)$$

- $f_9(G)$
- $f_{10}(B)$
- $f_0(A)$
- $f_1(B, A)$
- $f_2(C)$
- $f_3(D, B, C)$
- $f_4(E, C)$
- $f_5(F, D)$
- $f_6(G, F, E)$
- $f_7(H, G)$
- $f_8(I, G)$
- $f_{12}(B, D, E)$
- $f_{13}(B, D, F, G)$
- $f_{14}(G)$
- $f_{15}(D, F, G)$
- $f_{16}(F, G)$
- $f_{17}(G)$
- $f_{18}(G)$

Variable elimination example (step 6)

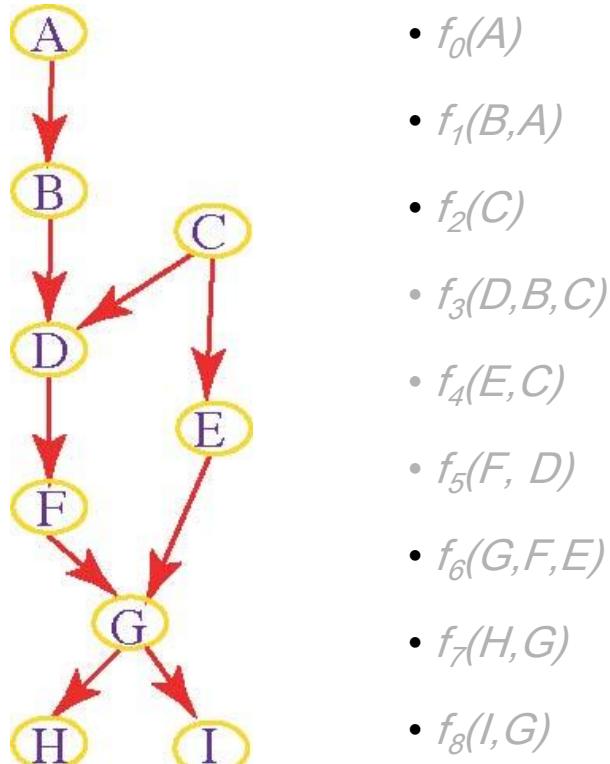

Compute $P(G | H=h_1)$. Elimination ordering A, C, E, I, B, D, F .

Previous state:

$$P(G, H=h_1) = f_{18}(G)$$

Normalize:

$$P(G | H=h_1) = f_{18}(G) / \underbrace{\sum_{g \in \text{dom}(G)} f_{18}(G)}_{\bullet f_g(G)}$$

- $f_0(A)$
- $f_1(B, A)$
- $f_2(C)$
- $f_3(D, B, C)$
- $f_4(E, C)$
- $f_5(F, D)$
- $f_6(G, F, E)$
- $f_7(H, G)$
- $f_8(I, G)$
- $f_9(G)$
- $f_{10}(B)$
- $f_{12}(B, D, E)$
- $f_{13}(B, D, F, G)$
- $f_{14}(G)$
- $f_{15}(D, F, G)$
- $f_{16}(F, G)$
- $f_{17}(G)$
- $f_{18}(G)$

Lecture Overview

- Recap Intro Variable Elimination
- Variable Elimination
 - Simplifications
 - Example
 - Independence
- Where are we?

Complexity (not required)

- The complexity of the algorithm depends on a measure of complexity of the network.
- The size of a tabular representation of a factor is exponential in the number of variables in the factor.
- The **treewidth** of a network, given an elimination ordering, is the maximum number of variables in a factor created by summing out a variable, given the elimination ordering.
- The **treewidth** of a belief network is the minimum treewidth over all elimination orderings. The treewidth depends only on the graph structure and is a measure of the sparseness of the graph.
- The complexity of VE is exponential in the treewidth and linear in the number of variables.
- Finding the elimination ordering with minimum treewidth is NP-hard, but there is some good elimination ordering heuristics.

Variable elimination and conditional independence

- Variable Elimination looks incredibly painful for large graphs?
- We used conditional independence.....

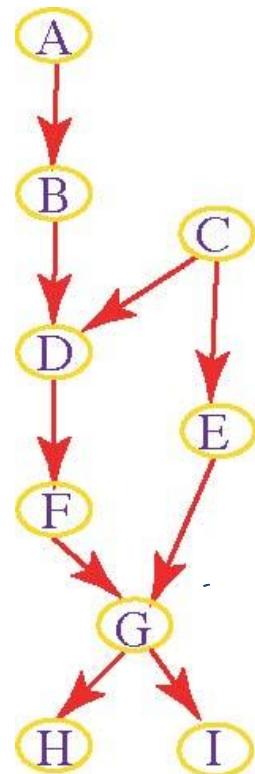

$$P(X_1 \dots X_n) = \prod P(X_i | \text{parents}(X_i))$$

- Can we use it to make variable elimination simpler?

Yes, all the variables from which the query is conditional independent given the observations can be pruned from the Bnet

VE and conditional independence: Example

- All the variables from which the query is conditional independent given the observations can be pruned from the Bnet

e.g., $P(G | H=v_1, F=v_2, C=v_3)$.

B, D, E

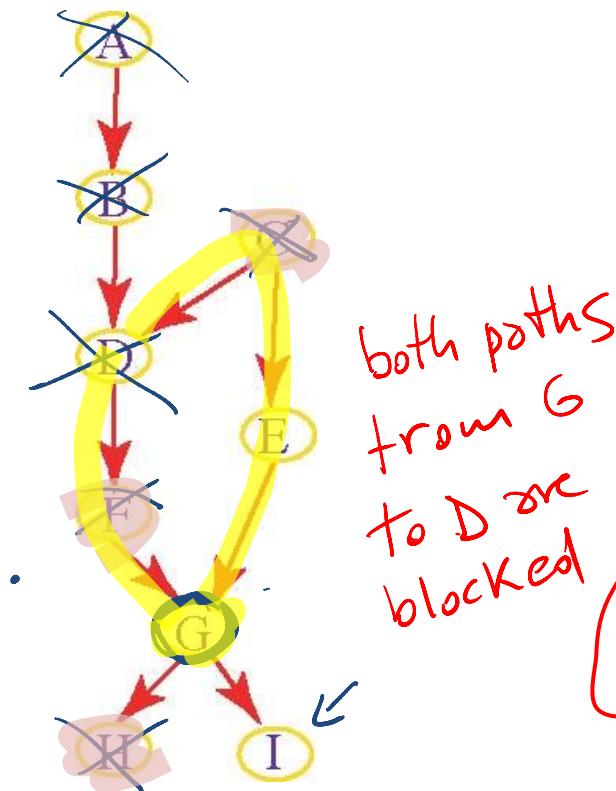

E, D

D, I

B, D, A

VE and conditional independence: Example

- All the variables from which the query is conditional independent given the observations can be pruned from the Bnet

e.g., $P(G | H=v_1, F=v_2, C=v_3)$.

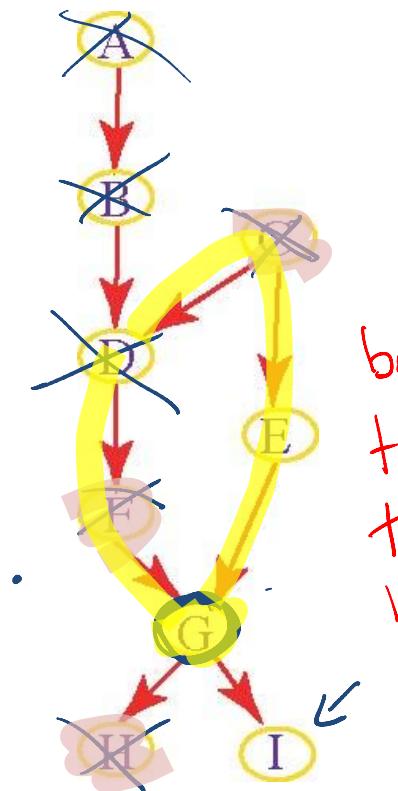

both paths
from G
to D are
blocked

$G \perp\!\!\!\perp$ conditionally
independent from V given
the observed vars
 H, F, C

VE and conditional independence: Example

- All the variables from which the query is conditional independent given the observations can be pruned from the Bnet

e.g., $P(G | H=v_1, F=v_2, C=v_3)$.

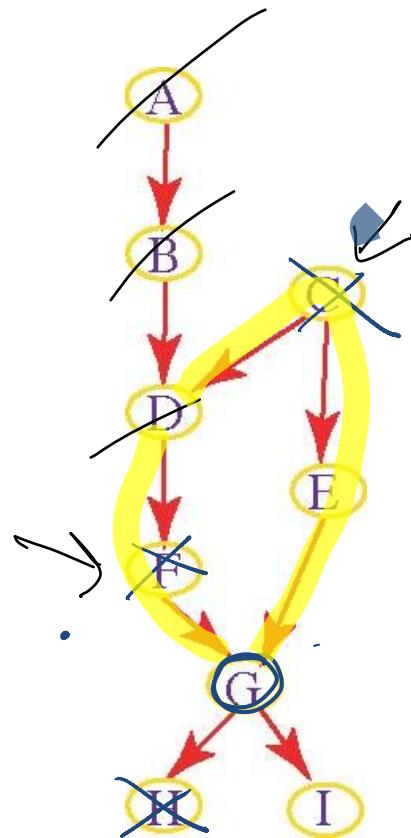

both paths
from G
to D are
blocked

$G \perp\!\!\!\perp$ conditionally
independent from V given
the observed vars
 H, F, C

VE and conditional independence: Example

- All the variables from which the query is conditional independent given the observations can be pruned from the Bnet

e.g., $P(G | \underline{H=v_1}, \underline{F=v_2}, \underline{C=v_3})$.

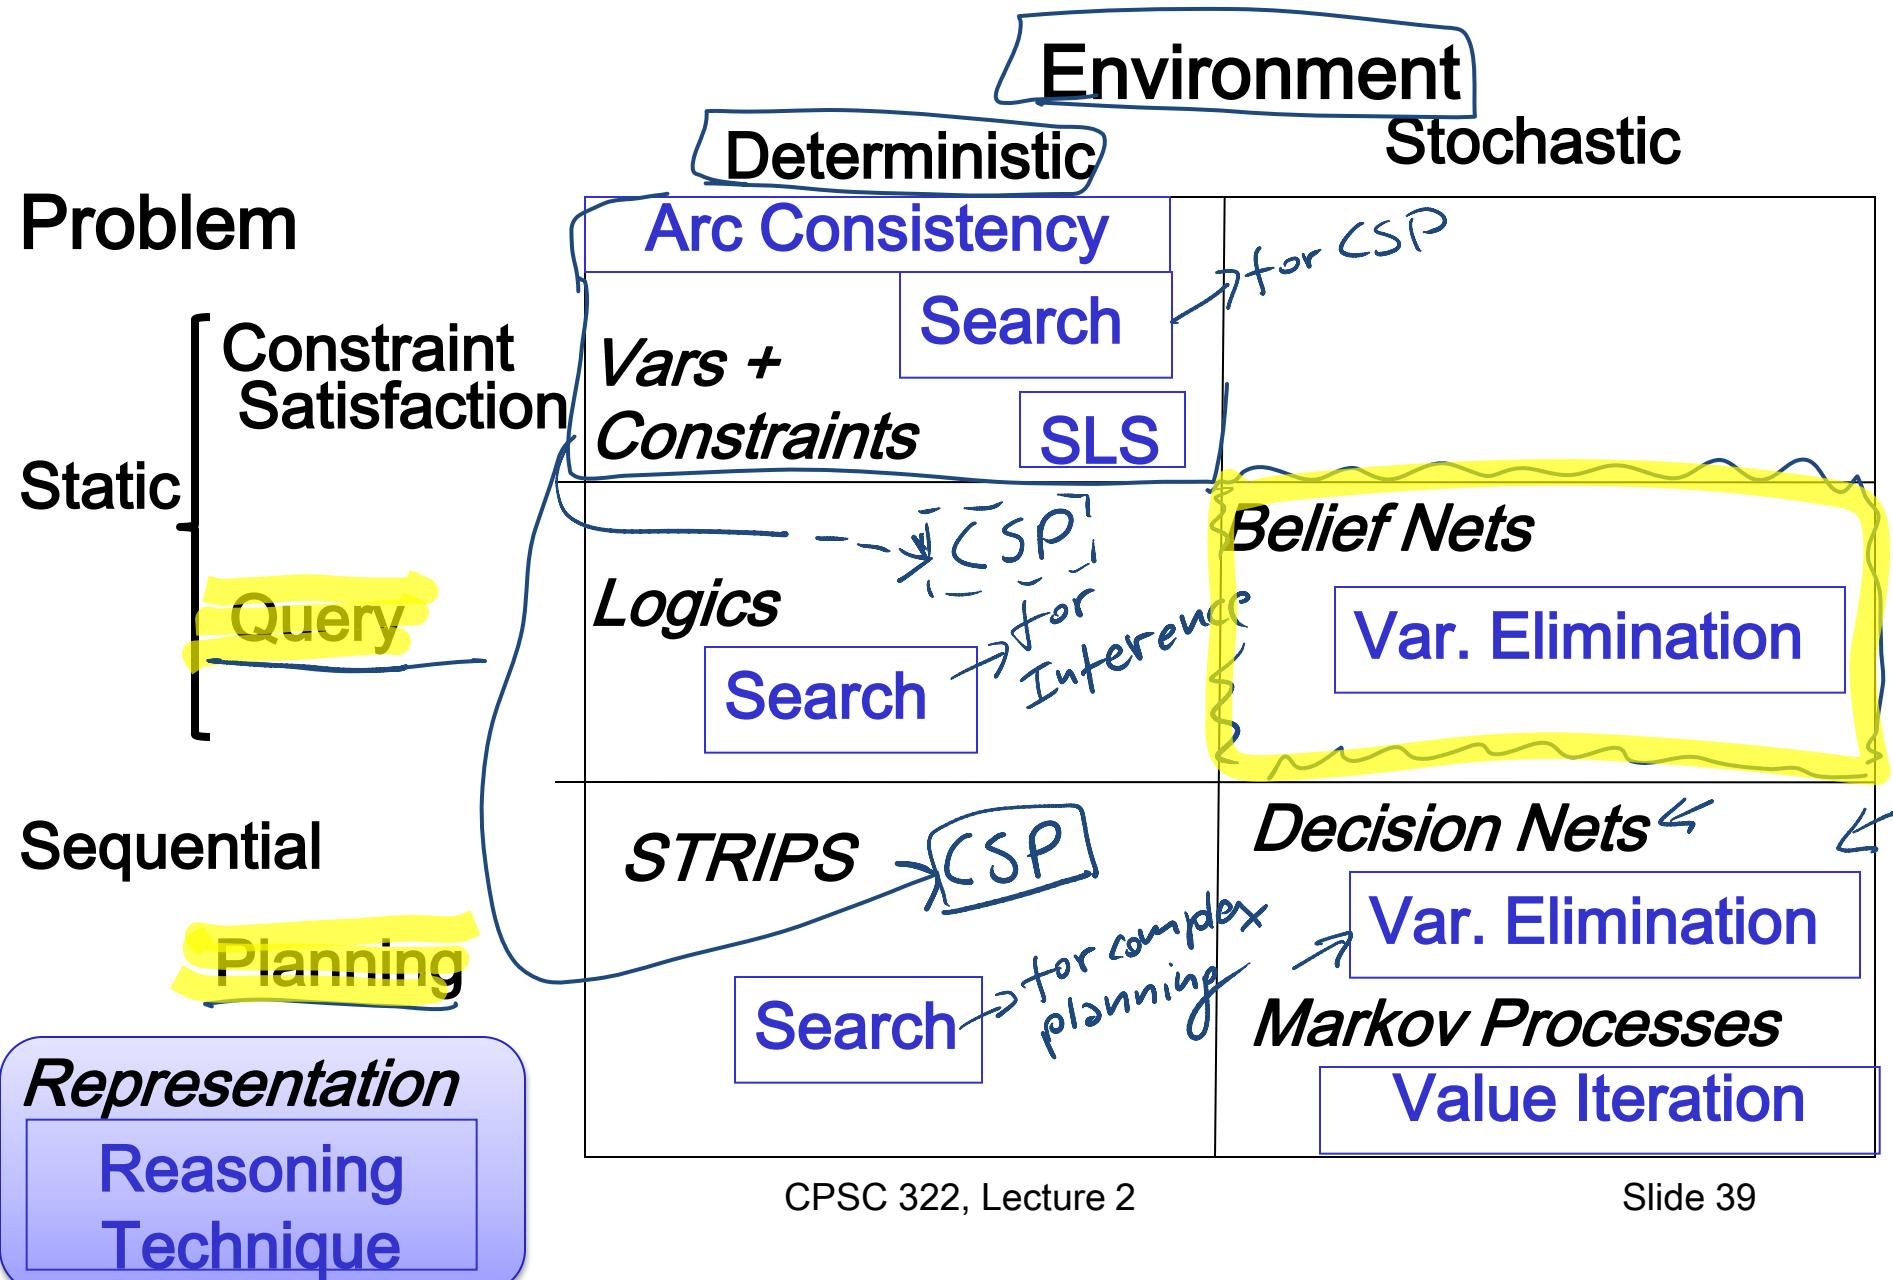

G is ^{indep.} $D \ B \ A$ given $C \ F$

Learning Goals for today's class

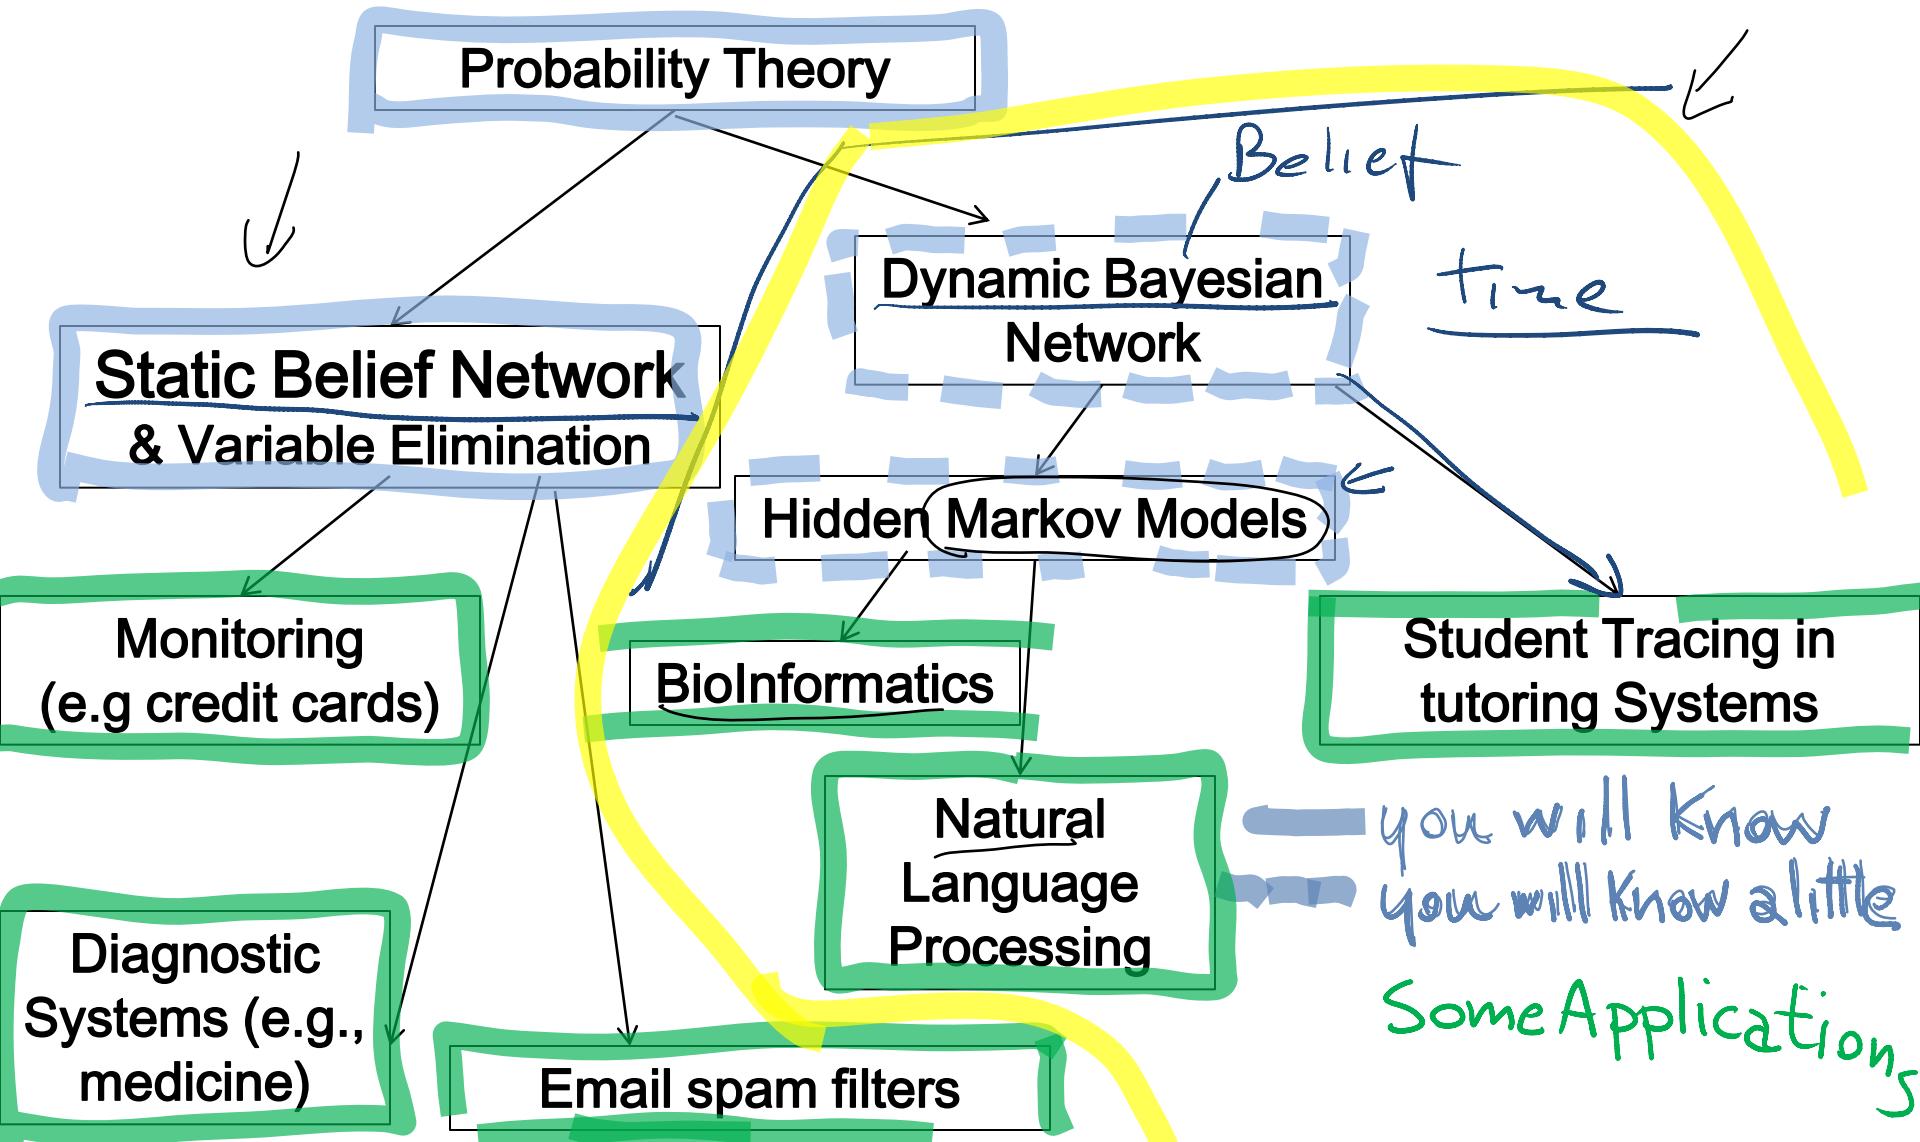

You can:

- Carry out **variable elimination** by using factor representation and using the factor operations.
- Use techniques to simplify variable elimination.

Big Picture: R&R systems

Answering Query under Uncertainty

Next Class

Probability and Time (*TextBook 6.5*)

Course Elements
