

- [5] 1. Write a regular expression for the language over $\{0, 1\}$ of strings with an even number of 0's.

- [5]** 2. Give a brief explanation of how to take two NFA's and form a new NFA accepting the union of the languages accepted by the two NFA's.

- [10]** 3. Consider the DFA, $(Q, \Sigma, \delta, q_0, F)$ such that $Q = \{q_0, q_1, q_2\}$, $\Sigma = \{0, 1\}$, $F = \{q_0\}$, and $\delta(q_i, j)$ equals q_k where k is $i + j \pmod 3$ (e.g., $\delta(q_2, 0) = q_2$ and $\delta(q_2, 1) = q_0$).
- (a) Draw a diagram of the above DFA with the notation given in class and the text.
 - (b) Find a regular expression for the language accepted by the above DFA using the technique in class and the text of passing to a GNFA and eliminating states one by one.

- [10] 4. Let L be the language of words of the form $0^n 1^{2^n}$ for some integer $n \geq 1$. Give a CFG describing L , and a pushdown automaton accepting L . Show that L is not regular.

- [10] 5. We say that strings x, y are *distinguishable* by a language, L , if there is a string z such that exactly one of xz, yz lies in L .
- (a) Let EVEN-EVEN be the set of words in $\{0, 1\}^*$ with an even number of 1's and an even number of 0's. Give a set, X , of four strings that are pairwise distinguishable by EVEN-EVEN (i.e., every two strings in X are distinguishable), and explain why X has this property.
 - (b) Consider a language, L , with a set, X , of p strings that are pairwise distinguishable by L . Explain why there is no DFA recognizing L with fewer than p states.
 - (c) Let L be the language of strings in $\{0, 1\}^*$ whose third last character is a 1 (for example, $000100 \in L$). Give a set, X , of 8 strings that are pairwise distinguishable by L , and explain why X has this property.

The University of British Columbia
Midterm Examination
October 27, 2004
Computer Science 421
Section 101
Instructor: Prof. Friedman

Duration: 50 minutes

- (1) Be sure that you have 7 pages in addition to this one.
- (2) Put your name below and on the **back** of the other pages. Write it as **<last name>**, **<first name>**.
- (3) In all questions, **you must show work** — i.e. display intermediate results — to get full credit.
- (4) You have two blank pages at the end for additional work.

First Name _____ Last Name _____

Signature _____ Student Number _____

Rules governing examinations

- Each candidate should be prepared to produce upon request his library/AMS card.
- No candidate shall be permitted to enter the examination room after the expiration of one half hour, or to leave during the first half hour of the examination.
- Candidates are not permitted to ask questions of the invigilators, except in cases of supposed errors or ambiguities in examination questions.
- CAUTION - Candidates guilty of any of the following or similar practices shall be immediately dismissed from the examination and shall be liable to disciplinary action.
 - (a) Making use of any books, papers, or memoranda, other than those authorized by the examiners.
 - (b) Speaking or communicating with other candidates.
 - (c) Purposely exposing written papers to the view of other candidates.
- Smoking is not permitted during examinations.
