

Lecture 7-2 Computer and Network Security

Participation Quiz

You are the conductor of a train. It is headed down on one track where you see 5 workers fixing the track. They cannot hear, see, or feel the train coming. You know for a fact that the train is going fast enough to kill them if a collision occurs. However, you notice there is an alternate track ahead that you can switch the train onto. It has 1 worker and again, she cannot hear, see, or feel the train coming. Do you make the switch to the alternate track?

A: Make the switch, 5 live and 1 dies

B: Do not make the switch, 5 die and 1 lives

Participation Quiz

You are a doctor working at a hospital. You have 5 patients. They are in dire need of an organ; a different one for each patient. They need a new organ immediately or they will die. Thinking fast, you remember that there is a patient of yours next door who just came for a check-up. He is asleep. You know that if you do not take his organs for transplant your 5 patients will die. If you do take the organs, they will survive (and for the sake of argument, assume they will have a normal life after transplant). There are no other options. Do you take the organs?

A: Take the organs, 5 live and 1 dies

B: Leave the patient alone, 5 die and 1 lives

Malware: Evil Code that can Run on Your Computer

Viruses

- What is a virus?
- Have you ever (knowingly) gotten one?

Worms

- What is a worm? How is it different from a virus?
- Is it wrong to distribute a virus or worm that doesn't harm anyone?

Trojan Horses

- What is a Trojan horse? How is it different from the first two?
- Do the victims of a virus/worm/Trojan horse share responsibility for being attacked if their system is not up to date?

Malware II: More Evil Code

Spyware/Adware

- What is spyware? What is adware?
- Is it ever moral to install spyware/adware on a user's computer without their consent?

Drive-by Downloads

- What is a drive-by download?
- What do you think the best defenses are against them?

General-purpose Defensive Measures

- security patches
- anti-malware tools
- firewalls
- Anything else?

Attacks: how mean computers hurt nice computers

How:

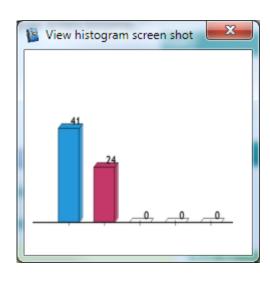

- Phishing
 - Have you been targeted? Has an attack been successful?
- [Distributed] Denial of Service

Why:

- Cybercrime: professionalization of malware
 - renting botnets (DDoS; spam)
 - stealing credit card numbers, passwords
- Cyberwarfare: states as actors or targets
 - North Korea vs USA gov, corporate sites (2009)
 - Russia vs Georgia during and after South Ossetia war (2008)
 - Stuxnet (2009-)
 - A variety of government, activist sites during Arab Spring (2011)
 - Anonymous

Computer and Network Security

"Canadians should have the right to vote online in federal, provincial and municipal elections."

Online Voting

Motivation:

- More people would vote
- Votes would be counted more quickly
- Cost less money
- Avoid disputed elections like Florida 2000
- Eliminate ballot box tampering
- Software can prevent accidental over-, under-voting

Risks:

- Gives unfair advantage to those with home computers
- More difficult to preserve voter privacy
- More opportunities for vote selling
- Obvious target for a DDoS attack
- Security of election depends on security of home computers
- Susceptible to phony vote servers
- No paper copies of ballots for auditing or recounts
