Snippets are valuable, but are difficult to parse:

```
mStartButtonListener = new OnClickListener() {          common type name
    @Override
    public void onClick(View arg0) {
        clock.setBase(SystemClock.elapsedRealtime());
missing type declaration
        ...
        clock.start();
    }                                 missing statements
};
```
