

# Information Visualization

## Color

**Zipeng Liu, Tamara Munzner**  
Department of Computer Science  
University of British Columbia

Lecture 12/13, 13 & 25 Feb 2020  
<https://www.students.cs.ubc.ca/~cs-436v/20jan/>

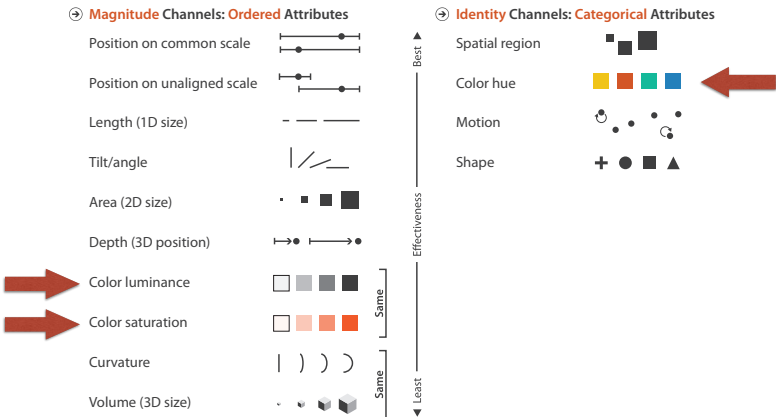

### Upcoming

- Foundations 4: out Feb 13, due Feb 26 (right after reading week)
- Programming 3: out Feb 13, due Mar 4 (1 week after reading week)
- D3 videos/readings week 6
  - Color and Size legends with D3.js [30 min]
  - Scatter Plot with Menus [46 min]
  - Circles on a Map [42 min]
  - Line Charts with Multiple Lines [42 min]
- Quiz 6, due by Fri Feb 14, 8am
- Team formation, due by Fri Feb 14 11:59pm

### Outline

- Color in vision theory
- Color channels in vis
  - Decomposition
    - HSL
    - Other color spaces
  - Color deficiency
  - Interaction with others
- Practical advice
  - Colormaps
  - Tools and programming libraries

### Channels: the big picture

## Color in Vision Theory

### Light

If I tell you the wavelength, can you tell what color you are seeing?

### Eye anatomy

### Cone and Rod Cells on Retina

~120 million rods: black vs. white  
~5-6 million cones: color  
R 63% - G 31% - B 6%

### Opponent process

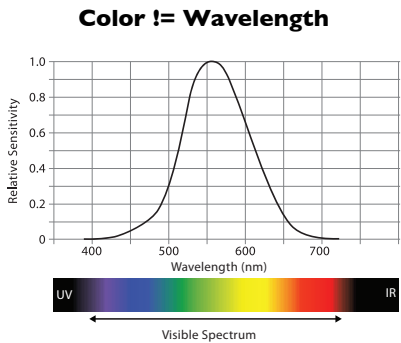

- perceptual processing before optic nerve
  - one achromatic luminance channel ( $L^*$ )
  - edge detection through luminance contrast
  - 2 chroma channels
    - red-green ( $a^*$ ) & yellow-blue axis ( $b^*$ )

[Seriously Colorful: Advanced Color Principles & Practices. Stone.Tableau Customer Conference 2014.]

### Light

If I tell you the wavelength, can you tell what color you are seeing?

### Color Appearance

- Given  $L$ ,  $a$ ,  $b$ , can we tell what color it is?

CIE LAB color space

### Color/Lightness constancy: Illumination conditions

Image courtesy of John McCann

### Color/Lightness constancy: Illumination conditions

Image courtesy of John McCann

### Contrast with background

### Contrast with background

Black and blue? White and gold?

### Bezold Effect: Outlines matter

[Seriously Colorful: Advanced Color Principles & Practices. Stone.Tableau Customer Conference 2014.]

Color Appearance

- Given L, a, b, can we tell what color it is?

- Chromatic adaptation
- Luminance adaptation
- Simultaneous contrast
- Spatial effects
- Viewing angle
- ...

Cognition (beyond retina, in brain)

- Given the L, a, b values, the lighting conditions, the surroundings, viewing angle ...

- Can you tell me what this color is?

- Middle part of an apple
- Bottom part of an apple
- The branch

Name the colours

<https://blog.xkcd.com/2010/05/03/color-survey-results/>

Name the colours

<http://www.doghouseidioms.com/186>

Name the colours

<https://blog.xkcd.com/2010/05/03/color-survey-results/>

Color is just part of vision system

- Does not help perceive
  - Position
  - Shape
  - Motion
  - ...

Color Channels in Visualization

Decomposing color

- first rule of color: do not **JUST** talk about color!
  - color is confusing if treated as monolithic

HSL decomposition

- decompose into three channels

- ordered can show magnitude

- luminance: how bright**

- saturation: how colourful**

- categorical can show identity

- hue: what color**

- channels have different properties

- what they convey directly to perceptual system

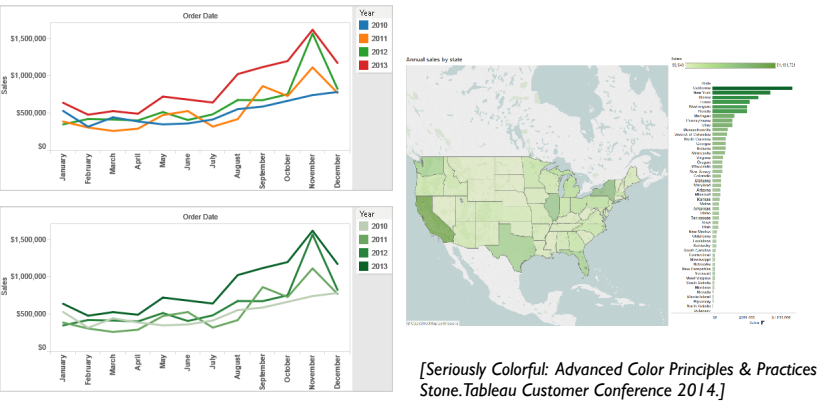

- how much they can convey: how many discriminable bins can we use?

Quiz: Which color channels?

- Continuous quantitative attribute

Categorical vs ordered color

[Seriously Colorful: Advanced Color Principles & Practices. Stone. Tableau Customer Conference 2014.]

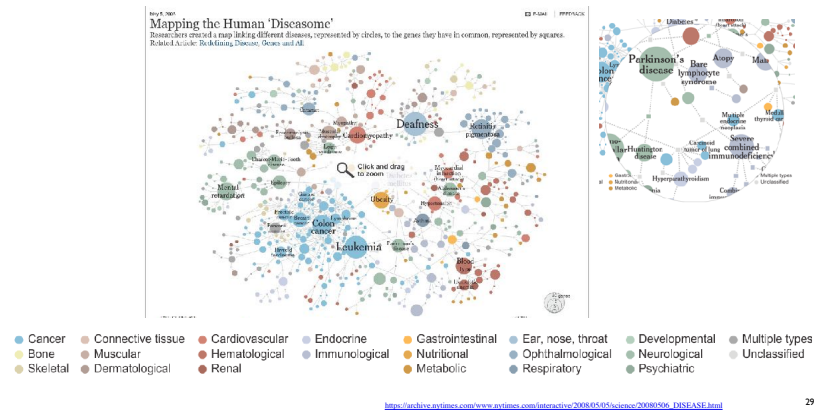

Categorical color: limited number of discriminable bins

- human perception built on relative comparisons
  - great if color contiguous
  - surprisingly bad for absolute comparisons
- noncontiguous small regions of color
  - fewer bins than you want
  - rule of thumb: 6-12 bins, including background and highlights

[Cinteny: flexible analysis and visualization of synteny and genome rearrangements in multiple organisms. Sinha and Meller. BMC Bioinformatics, 8:82, 2007.]

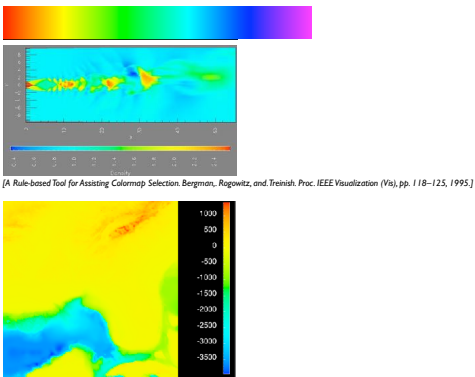

Categorical color: limited number of discriminable bins

<https://www.research.ibm.com/people/llloyd/colorcolor/HTML>

Ordered color: Rainbow is poor default

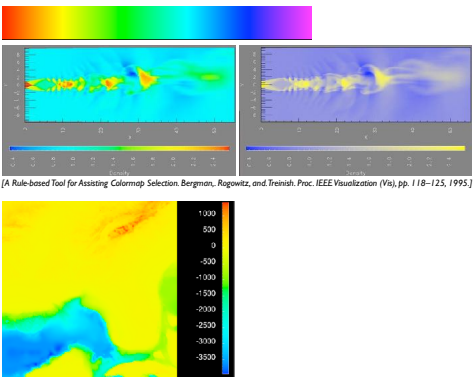

- problems
  - perceptually unordered
  - perceptually nonlinear
- benefits
  - fine-grained structure visible and nameable

[Why Should Engineers Be Worried About Color? Treish and Ragwitz. 1998. <http://www.research.ibm.com/people/llloyd/colorcolor/HTML>]

Ordered color: Rainbow is poor default

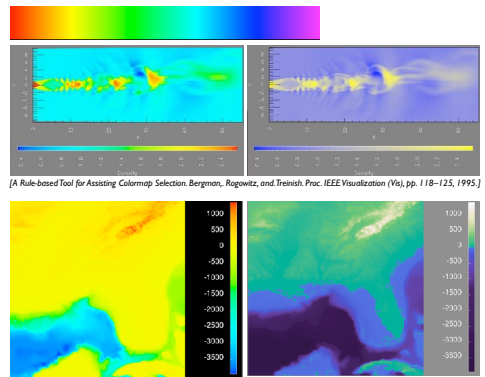

- problems
  - perceptually unordered
  - perceptually nonlinear
- benefits
  - fine-grained structure visible and nameable
- alternatives
  - large-scale structure: fewer hues

[Why Should Engineers Be Worried About Color? Treish and Ragwitz. 1998. <http://www.research.ibm.com/people/llloyd/colorcolor/HTML>]

Ordered color: Rainbow is poor default

- problems
  - perceptually unordered
  - perceptually nonlinear
- benefits
  - fine-grained structure visible and nameable
- alternatives
  - large-scale structure: fewer hues
  - fine structure: multiple hues with monotonically increasing luminance [eg viridis R/python]

[Why Should Engineers Be Worried About Color? Treish and Ragwitz. 1998. <http://www.research.ibm.com/people/llloyd/colorcolor/HTML>]

## Viridis

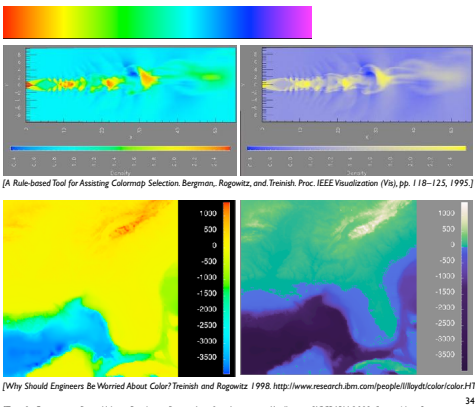

- colorful, perceptually uniform, colorblind-safe, monotonically increasing luminance

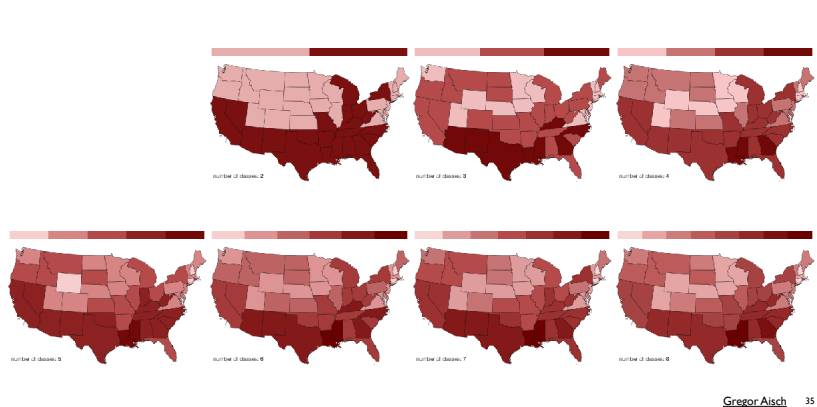

<https://cran.r-project.org/web/packages/viridis/vignettes/intro-to-iridis.html>

## Ordered color: Rainbow is poor default

- problems
  - perceptually unordered
  - perceptually nonlinear
- benefits
  - fine-grained structure visible and nameable
- alternatives
  - large-scale structure: fewer hues
  - fine structure: multiple hues with monotonically increasing luminance [eg viridis R/python]
  - segmented rainbows for binned or categorical

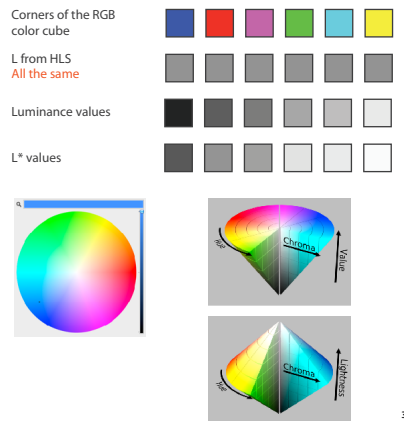

## Ordered color: how many bins?

## Many color spaces

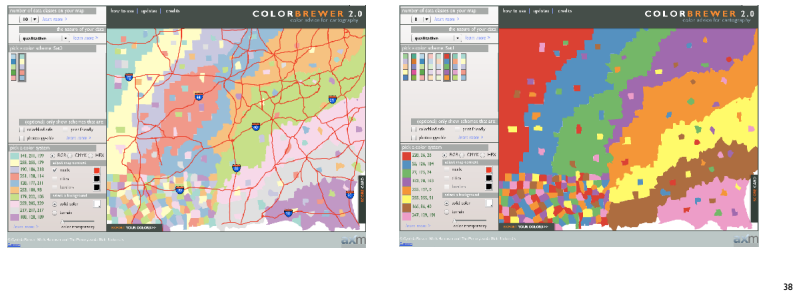

- HSL/HSV: somewhat better for encoding
  - hue/saturation wheel intuitive
  - beware: only pseudo-perceptual!
  - lightness (L) or value (V)  $\neq$  luminance or  $L^*$
- Luminance, hue, saturation
  - good for encoding
  - but not standard graphics/tools colorspace
- CIE  $L^*a^*b^*$ : good for computation
  - $L^*$  intuitive: perceptually linear luminance
  - $a^*b^*$  axes: perceptually linear but nonintuitive
- RGB: good for display hardware
  - poor for encoding

## Tools and Libraries in Practice

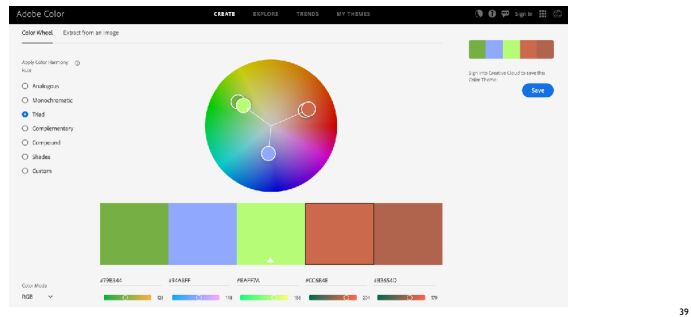

### ColorBrewer

- <http://www.colorbrewer2.org>
- saturation and area example: size affects salience!
- Limited customization: 2 parameters

### Adobe Color Picker

- <https://color.adobe.com/create>
- For general design purpose, not particularly for vis

### Colorgical

- <http://vrl.cs.brown.edu/color>
- Highly customized: #colors, perceptual distance, name uniqueness, hue, lightness range...
- Only targeted at categorical data

## Color management in D3

- D3-color
  - <https://github.com/d3/d3-color>
  - Conversion to/from different color spaces
  - Low-level computations
- D3-scale
  - <https://github.com/d3/d3-scale>
  - Customize your own color scale using `d3.scaleSequential()` and `d3.scaleOrdinal()`
  - Use case: generate color schemes using the web tools mentioned before, then use `d3-scale` to implement it

- D3-scale-chromatic:
  - <https://github.com/d3/d3-scale-chromatic>
  - Implementation of the colormap
  - Lots of good color schemes and scales
  - High-level, ready-to-be-used for most vis
    - Use this for your project

## Color 2

### Grades distribution so far: Foundations

### Grade distributions so far: Quizzes

### Polls/ announcements

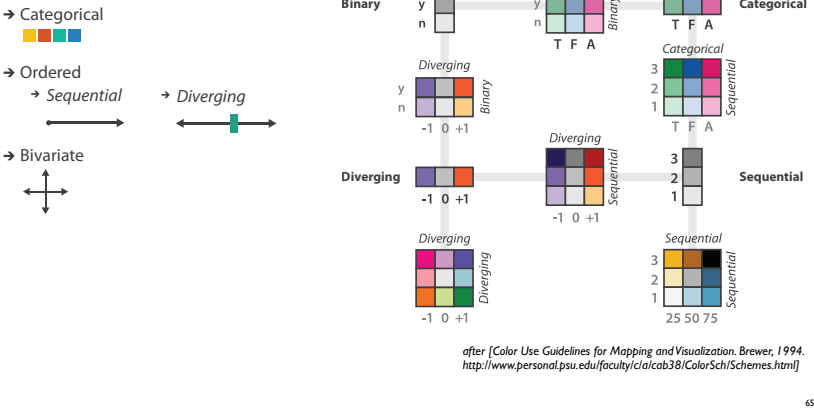

- piazza @188: would you use extra TA office hours?
- grace day granularities
  - grace days are integer not fractional. use full grace day once you're over at all.
- gradescope
  - we'll use it for exam marking
  - email went out for [gradescope.ca](https://gradescope.ca) (**not** [gradescope.com](https://gradescope.com))

### Reminder: Textbook as additional resource beyond slides

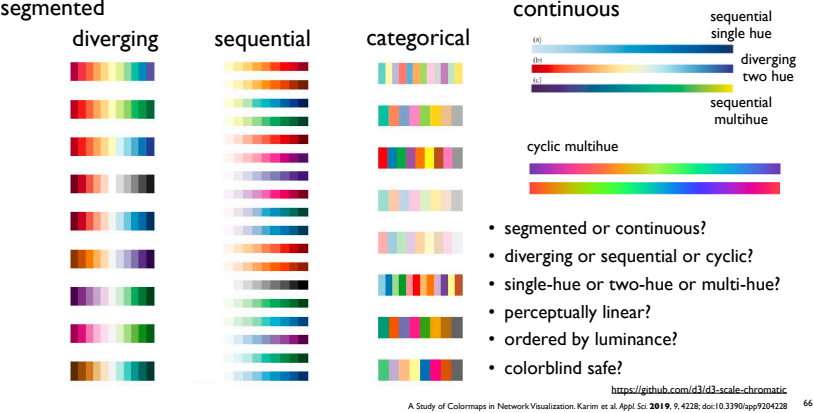

- Visualization Analysis & Design (VAD) textbook as further reading!
  - relevant chapter(s) given at end of each lecture slide deck
  - free to read through UBC library: <http://resolve.library.ubc.ca/cgi-bin/catsearch?bid=7678980>
- so far
  - Intro: Ch 1
  - Data: Ch 2, Ch 4
  - Tasks: Ch 3
  - Marks and Channels: Ch 5
  - Tables: Ch 7
  - Interactive Views: Ch 10, Ch 11 (except Sec 11.6), Ch 12
  - Maps: Ch 8 (only Sec 8.1-8.3)
  - Color: Ch 10
  - Networks & Trees: Ch 9

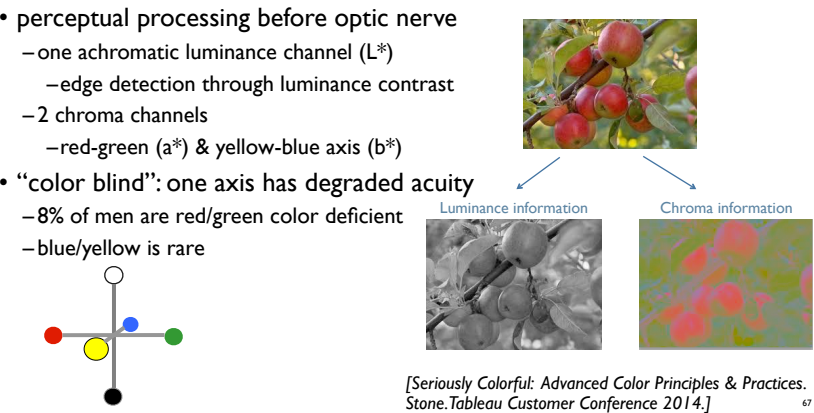

Colormaps

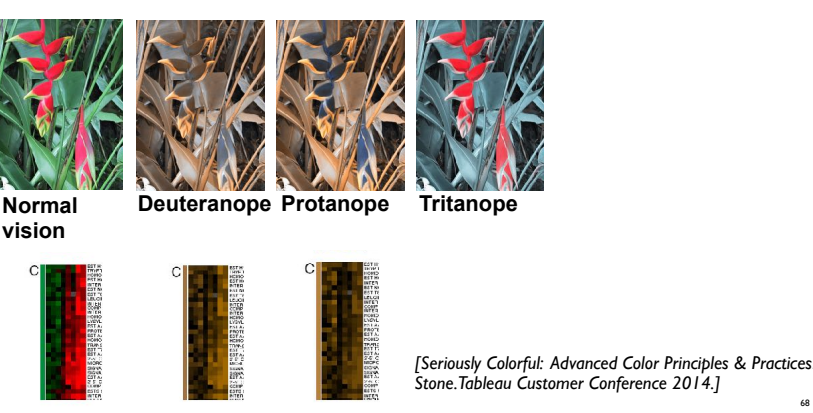

What kinds of color palettes are there?

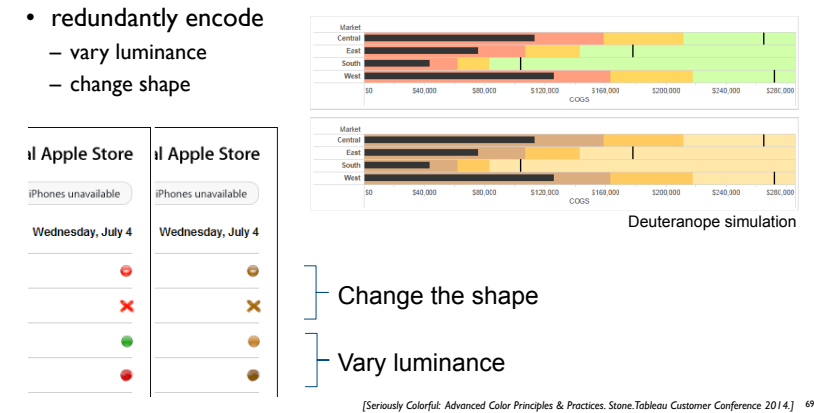

Opponent color and color deficiency

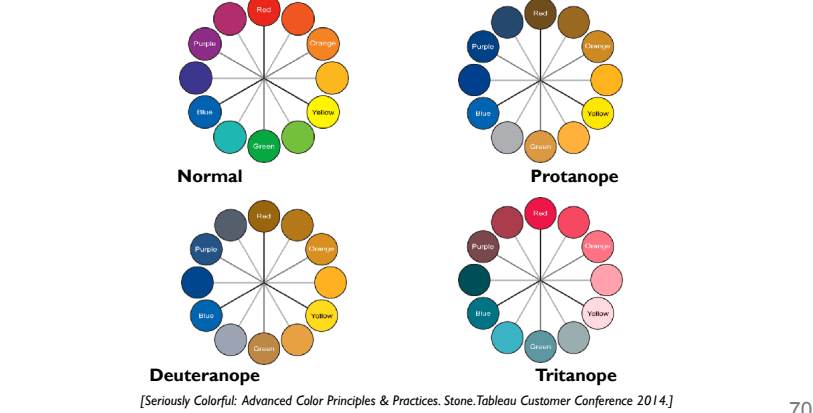

Designing for color deficiency: Check with simulator

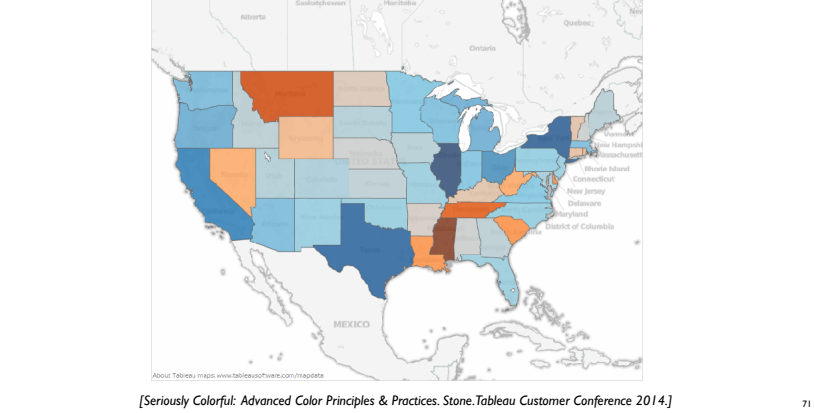

Designing for color deficiency: Avoid encoding by hue alone

Color deficiency: Reduces color to 2 dimensions

Designing for color deficiency: Blue-Orange is safe
