<p>Lecture 1: Introduction</p> <p>Information Visualization CSPSC 533C, Fall 2011</p> <p>Tamara Munzner UBC Computer Science</p> <p>Wed, 7 September 2011</p>	<ul style="list-style-type: none"> main source <ul style="list-style-type: none"> readings, lecture slides, all information reload frequently, updates common! permanent URL <ul style="list-style-type: none"> http://www.cs.ubc.ca/~tmm/courses/533-11 	<ul style="list-style-type: none"> reading-intensive course <ul style="list-style-type: none"> reading front-loaded in first 9 weeks (less than in past: using new textbook draft) oral presentations <ul style="list-style-type: none"> major presentation project update, project final writing <ul style="list-style-type: none"> questions, proposal, final report programming <ul style="list-style-type: none"> project course (unless do analysis option) time management critical: staged development no problem sets or exams schedule <ul style="list-style-type: none"> no classes week of VisWeek (Oct 24, 26) 	<ul style="list-style-type: none"> lectures/readings <ul style="list-style-type: none"> weeks 1-9 (no classes week 8) 1 lecture 2-3 core readings required, further readings optional submit questions for each lecture (10%) discussion (3%) presentations (25%) <ul style="list-style-type: none"> weeks 10-13 student presentations only presenter does topic readings discussion (3%) project (50%) <ul style="list-style-type: none"> weeks 6-14 meetings, proposal, update, final <p>http://www.cs.ubc.ca/~tmm/courses/533-11/structure.html</p>
Course Mark Breakdown	Required Readings	Prerequisites	Participation
<ul style="list-style-type: none"> class participation: 25% <ul style="list-style-type: none"> questions 75%, discussion 25% presentation: 25% <ul style="list-style-type: none"> details later project: 50% <ul style="list-style-type: none"> proposal 10% interim update presentation 10% final presentation 10% final written report 20% project content 50% 	<ul style="list-style-type: none"> Munzner <ul style="list-style-type: none"> Information Visualization: Principles, Methods, and Practice pre-publication draft chapters posted one week before reading is due many papers <ul style="list-style-type: none"> color PDF downloads from page some are DL links: use library EZproxy no required textbook to buy optional reading: Ware, Tufte 	<ul style="list-style-type: none"> no courses required HCI very useful computer graphics useful <ul style="list-style-type: none"> no graphics background: constraint on project choices grads from other departments welcome if no programming background: do analysis/survey project 	<ul style="list-style-type: none"> 6%: discussions in class <ul style="list-style-type: none"> both lectures and student presentations 19%: questions for each required reading <ul style="list-style-type: none"> two for longer draft book chapters one for shorter papers due at 11am Mon/Wed for day's reading attendance expected <ul style="list-style-type: none"> tell me in advance if you know you'll miss class question credit still possible if submitted in advance tell me when you recover if you were ill
Questions	Question Examples: Poor	Question Examples: OK	Question Examples: Good
	<ul style="list-style-type: none"> Well, what exactly Pad++ is? Is it a programming library or a set of API or a programming language? how can we use it in our systems, for example may be programming in TCL or OpenGL, may be ? I learned some from this paper and got some ideas of my project. 	<ul style="list-style-type: none"> This seems like something fun to play around with, are there any real implementations of this? Has a good application for this type of zooming been found? Is there still a real need for this now that scroll wheels have become prevalent and most people don't even use the scroll bar anymore? Playing with the applet, I find I like half of their approach. It's nice to zoom out as my scroll speed increases, but then I don't like the automatic zoom in when I stop scrolling. Searching the overview I found the location I wanted, but while I gazed and looked at the overview, I fell back into the closeup. I think they need to significantly dampen their curve. 	<ul style="list-style-type: none"> It would be interesting to compare the approach in this paper to some other less-mathematically-thought-out zoom and pan solutions to see if it is really better. Sometimes "faking it" is perceived to be just as good (or better) by users. The space-scale diagrams provided a clear intuition of why zooming out, panning then zooming in is a superior navigation technique. However, I found the diagram too cumbersome for practical use, especially for objects with zoom-dependent representations (Figure 11).
Question Examples: Great	Presentations	Presentation Topics	Projects
<ul style="list-style-type: none"> I'm curious as to what would have happened if the authors had simply preselected the values of the free parameters for the participants in their user study, and then had the users compare their technique to the standard magnification tools present in a 'normal' application (much like the space-scale folks did). Could it be that the users are 'manufacturing' a large standard deviation in the free parameter specifications by settling for values that merely produce a local improvement in their ability to manipulate the interface, instead of actively searching for an optimal valuation scheme? In a related vein, the speed-dependent automatic zooming met with mixed success on some applications. Isn't this success related to how "compressible" some information is? i.e. because zooming must necessarily throw out some information, it isn't obvious which information to keep around to preserve the navigable structure. 	<ul style="list-style-type: none"> second half of class <ul style="list-style-type: none"> sign up by Oct 21 material (exact numbers TBD, depending on enrollment) <ul style="list-style-type: none"> 1 paper from my suggested list 2 papers your choice talk <ul style="list-style-type: none"> slides required summary important, but also have your own thoughts critical points of papers comparison and critique grading <ul style="list-style-type: none"> per-paper: summary 70%, critique 30% synthesis: critique/synthesis 100% general: presentation style 50%, content prep 50% balance between 3 pieces depends on num papers assigned 	<p>http://www.cs.ubc.ca/~tmm/courses/533-11/presentations.html</p>	<ul style="list-style-type: none"> choice 1: programming <ul style="list-style-type: none"> common case will only consider supervising students who do programming projects choice 2: analysis <ul style="list-style-type: none"> use existing tools on dataset detailed domain survey particularly suitable for non-CS students choice 3: survey <ul style="list-style-type: none"> very detailed domain survey particularly suitable for non-CS students

Projects: More

- stages
 - meetings with me for approval by Oct 11-21 (at latest)
 - proposal due Fri Oct 28
 - update presentations Nov 14/16/21
 - final presentations Mon Dec 12 2-5
 - final report Wed Dec 14 noon
- resources
 - software
 - data
 - project ideas

<http://www.cs.ubc.ca/~tmn/courses/533-11/resources.html>

Course Goals and Feedback

- twofold goal
 - specific: teach you some infovis
 - generic: teach you how to be a better researcher
- detailed written comments on writing and presenting
 - both content and style
 - at level of paper review for your final project
 - goal: within a week or so
 - before updates, for early presentations
- fast grading for reading questions
 - great 100%, good 90%, ok 78%, poor 67%, zero 0%
 - goal: turn around by next class
 - one week at most

Office Hours

- 5-6 Wed after class, or by appointment
 - office in X661, ICICS/CS X-Wing

Reserve Books

- Information Visualization: Perception for Design, Colin Ware (2nd ed)
- Envionising Information, Edward R. Tufte, Graphics Press 1990
- The Visual Display of Quantitative Information, Edward R. Tufte, Graphics Press 1983
- Visual Explanations, Edward R. Tufte, Graphics Press 1997
- Readings in Information Visualization: Using Vision To Think, Card, Mackinlay, and Shneiderman, eds; Morgan Kaufmann 1999.
- The Visualization Toolkit, 3rd edition; Schroeder, Martin and Lorensen; Kitware Inc. 2004

Information Visualization

- visual representation of abstract data
 - computer-generated, often interactive

Interactivity

- static images
 - 10,000 years
 - art, graphic design
- moving images
 - 150 years
 - cinematography
- interactive graphics
 - 30 years
 - computer graphics, human-computer interaction

Information Visualization

- visual representation of abstract data
 - computer-generated, often interactive
 - help human perform some task more effectively

Information Visualization

- visual representation of abstract data
 - computer-generated, can be interactive
 - help human perform some task more effectively
- bridging many fields
 - graphics: drawing in realtime
 - cognitive psych: finding appropriate representation
 - HCI: using task to guide design and evaluation

Information Visualization

- visual representation of abstract data
 - computer-generated, can be interactive
 - help human perform some task more effectively
- bridging many fields
 - graphics: drawing in realtime
 - cognitive psych: finding appropriate representation
 - HCI: using task to guide design and evaluation
- external representation
 - reduces load on working memory
 - offload cognition
 - familiar example: multidigit multiplication

External Representation: multiplication

Visualization Design

domain problem characterization → data operation abstraction design → encoding/interaction/technique design → algorithm design

53-103

Data Principles

53-104

Visual Encoding Principles

53-105

Interaction Principles

53-106

View Composition Methods

53-107

Data Reduction Methods

53-108

Dimension Reduction Methods

53-109

Tabular Data

53-110

Graphs/Trees

53-111

Spatial Fields / SciVis

53-112

InfoVis vs. SciVis

- is spatialization given (scivis) or chosen (infovis)
- infovis: how to represent
 - choosing, doing, evaluating
 - huge space of possibilities: random walk ineffective
 - need design guidelines
 - broad range of application domains
 - discrete math: stats, graph theory, combinatorics, ...
- scivis: heavy algorithms focus
 - small set of app domains
 - volume rendering (medical imaging)
 - flow (fluid dynamics)
 - continuous math: signal processing, flow topology, meshing, ...

53-113

Evaluation

53-114

Research Process/Papers

Reading For Next Time

- Visualization. Munzner. Chapter 27, Fundamentals of Graphics
 - overview to show you spirit/content of this course
- Visual Exploration and Analysis of Historic Hotel Visits. Weaver et al.
- MizBee: A Multiscale Synteny Browser. Meyer, Munzner, Pfister.
- reading questions due 11am Monday by email
 - Subject: 533 submit Q02
 - plain text is best
 - PDF if you must
 - no RTF/DOC/etc...
- <http://www.cs.ubc.ca/~tmm/courses/533-11/@today>

53-116
