

Serendip

Topic Model-Driven Visual Exploration of Text Corpora

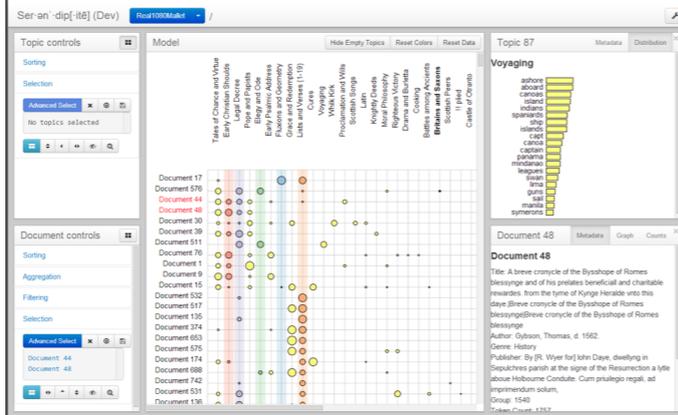

Eric Alexander, Department of Computer Science, University of Wisconsin-Madison

Joe Kohlmann, Department of Computer Science, University of Wisconsin-Madison

Robin Valenza, Department of English, University of Wisconsin-Madison

Michael Witmore, Folger Shakespeare Library in Washington, D.C.

Michael Gleicher, Member, IEEE, Department of Computer Science, University of Wisconsin-Madison

Serendip: Topic Model-Driven Visual Exploration of Text Corpora 2

Serendipity

- „The Three Princes of Serendip“
- Happy accidents
- Fate or extreme cleverness
- Research: How to make coincidence more likely?
- „The bohemian bookshelf“ by Thudt et al

Serendip: Topic Model-Driven Visual Exploration of Text Corpora 3

Promoting Serendipity

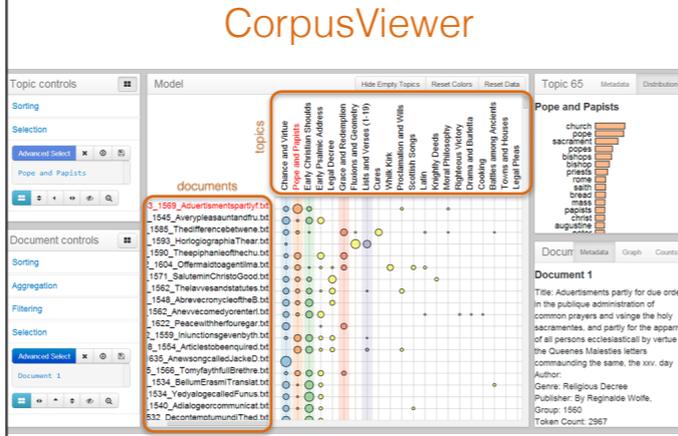

A. Thudt, U. Hinrichs, and S. Carpendale
 „The bohemian bookshelf: supporting serendipitous book discoveries through information visualization“
 In Proc. ACM Human Factors in Computing Systems

- Providing multiple access points
- Highlighting adjacencies
- Offering flexible pathways for exploration
- Enticing curiosity and playfulness

Serendip: Topic Model-Driven Visual Exploration of Text Corpora 4

Three Views

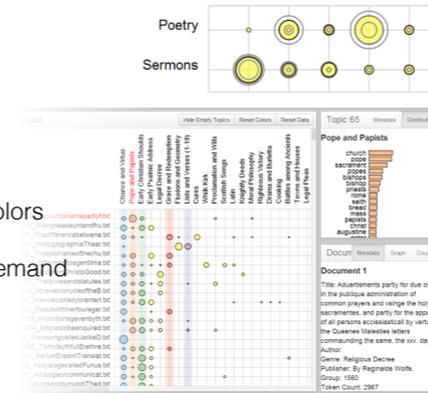

- **CorpusViewer**: Re-orderable matrix
- **TextViewer**: Examination within one document
- **RankViewer**: Examine specific words

Serendip: Topic Model-Driven Visual Exploration of Text Corpora 5

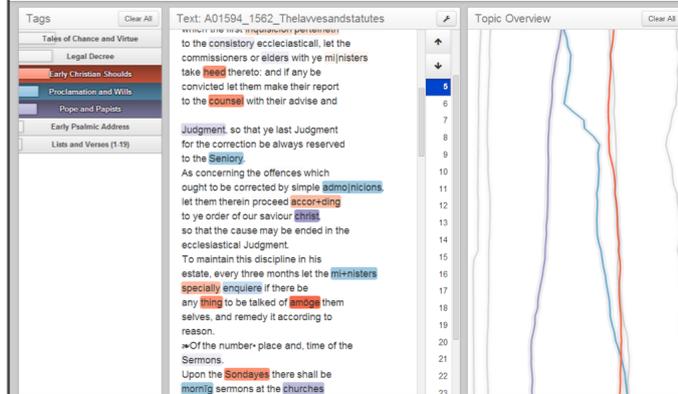

Features combatting scale

- Ordering
- Aggregation
- Annotation
- Assigning colors
- Details on demand

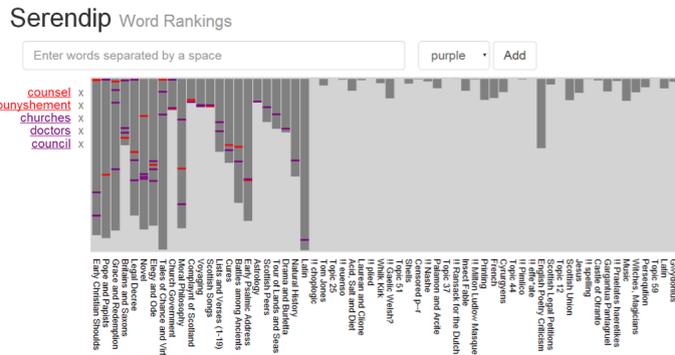

Serendip: Topic Model-Driven Visual Exploration of Text Corpora 7

TextViewer

Serendip: Topic Model-Driven Visual Exploration of Text Corpora 8

RankViewer

Serendip: Topic Model-Driven Visual Exploration of Text Corpora 9

How are the factors for Serendipity implemented?

- Multiple access points: 3 Views, Ordered to user's liking
- Highlighting adjacencies: Through ordering and vis
- Flexible pathways: Jumping between views
- Curiosity and playfulness: Interaction & Discovery

Serendip: Topic Model-Driven Visual Exploration of Text Corpora 10

2 use cases

• Vis Abstracts
 1127 abstracts
 From SciVis, InfoVis, VAST, BioVis, and PacificVis papers from 2007-2013 each 30 to 389 words

• Early Modern Literature
 1080 digitized texts
 From English literature published between 1530 to 1799 each few hundred words to few hundred pages

Formal evaluation still due

- To confirm serendipitous discoveries across multiple scales of data and abstraction
- Problem: How to evaluate serendipity?
- Long-term user studies needed

Serendip: Topic Model-Driven Visual Exploration of Text Corpora 11

Discussion

+ strengths

- Suitable for any document and corpus size
- Three layers (whole corpus, single document, single words)
- Simple but effective visualizations
- Easily accessible (Online tool; though topic modelling part still due)

- weaknesses

- Not for quick exploration
- Sceptical about serendipitous discoveries

Serendip: Topic Model-Driven Visual Exploration of Text Corpora 12

System	Serendip
What	Data Document collection (Text, Metadata, Topics)
Why	Tasks Explore document collections Facilitate serendipitous discoveries
How	Encode Reorderable matrix, line graph, bar graph Reduce Aggregation, Ordering Manipulate Order, Color, Annotate, Details-on-Demand
Scale	Up to ~1,000 Documents (various length)
