

Ch 13: Reduce Items and Attributes

Ch 14: Embed: Focus+Context

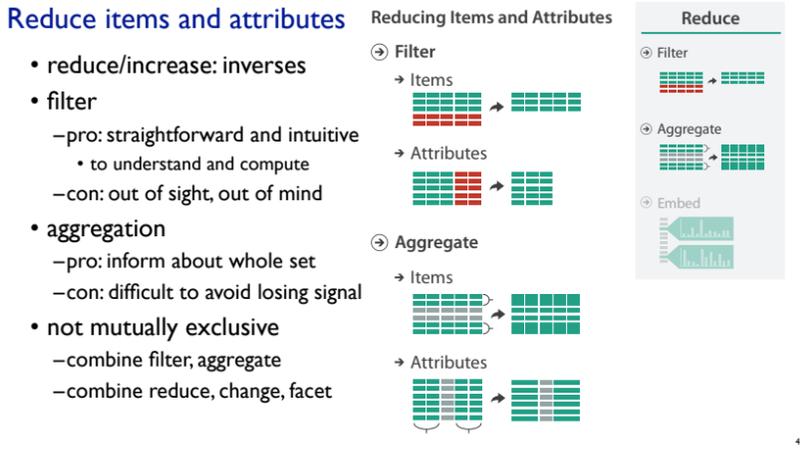

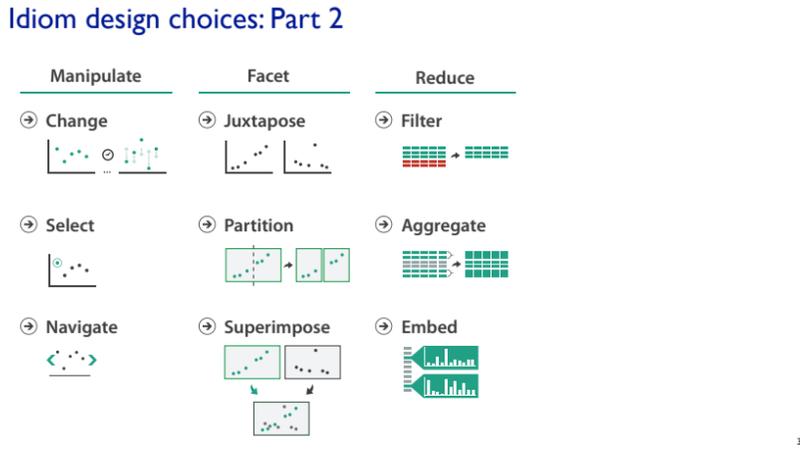

Tamara Munzner
 Department of Computer Science
 University of British Columbia

CPSC 547, Information Visualization
 Day 15: 28 February 2017

<http://www.cs.ubc.ca/~tmm/courses/547-17>

News

- topic/date assignments out soon
 - got last straggler just minutes ago
- marks for pitches and L12/L13/L14 out soon
- next time
 - I'll discuss presentation expectations
 - and give example presentation
 - new room! in Forestry (2424 Main Mall), Room 2300 A
- reminder: meetings due by Fri 5pm
- reminder: proposals due by Mon 5pm

Idiom: dynamic filtering

System: **FilmFinder**

- item filtering
- browse through tightly coupled interaction
 - alternative to queries that might return far too many or too few

[Visual information seeking: Tight coupling of dynamic query filters with starfield displays. Ahlberg and Shneiderman. Proc. ACM Conf. on Human Factors in Computing Systems (CHI), pp. 313–317, 1994.]

Idiom: DOSFA

- attribute filtering
- encoding: star glyphs

[Interactive Hierarchical Dimension Ordering, Spacing and Filtering for Exploration Of High Dimensional Datasets. Yang, Peng, Ward, and Rundensteiner. Proc. IEEE Symp. Information Visualization (InfoVis), pp. 105–112, 2003.]

Idiom: histogram

- static item aggregation
- task: find distribution
- data: table
- derived data
 - new table: keys are bins, values are counts
- bin size crucial
 - pattern can change dramatically depending on discretization
 - opportunity for interaction: control bin size on the fly

Continuous scatterplot

- static item aggregation
- data: table
- derived data: table
 - key attribs x,y for pixels
 - quant attrib: overplot density
- dense space-filling 2D matrix
- color: sequential categorical hue + ordered luminance

[Continuous Scatterplots. Bachthaler and Weiskopf. IEEE TVCG (Proc. Vis 08) 14:6 (2008), 1428–1435. 2008.]

Idiom: scented widgets

- augment widgets for filtering to show *information scent*
 - cues to show whether value in drilling down further vs looking elsewhere
- concise, in part of screen normally considered control panel

[Scented Widgets: Improving Navigation Cues with Embedded Visualizations. Willett, Heer, and Agrawala. IEEE Trans. Visualization and Computer Graphics (Proc. InfoVis 2007) 13:6 (2007), 1129–1136.]

Multivariate Network Exploration and Presentation

[Multivariate Network Exploration and Presentation: From Detail to Overview via Selections and Aggregations. van den Elzen and van Wijk. TVCG 20(12) 2014.]

Interactive categorization of large image collections

[CLIC: Interactive categorization of large image collections. van der Corput and van Wijk. Proc. PacificVis 2016.]

Idiom: boxplot

- static item aggregation
- task: find distribution
- data: table
- derived data
 - 5 quant attribs
 - median: central line
 - lower and upper quartile: boxes
 - lower upper fences: whiskers
 - values beyond which items are outliers
 - outliers beyond fence cutoffs explicitly shown

[40 years of boxplots. Wickham and Stryjewski. 2012. had.co.nz]

Idiom: Hierarchical parallel coordinates

- dynamic item aggregation
- derived data: *hierarchical clustering*
- encoding:
 - cluster band with variable transparency, line at mean, width by min/max values
 - color by proximity in hierarchy

[Hierarchical Parallel Coordinates for Exploration of Large Datasets. Fua, Ward, and Rundensteiner. Proc. IEEE Visualization Conference (Vis '99), pp. 43–50, 1999.]

Spatial aggregation

- MAUP: Modifiable Areal Unit Problem
 - gerrymandering (manipulating voting district boundaries) is one example!

[http://www.e-education.psu.edu/geog486/14_p7.html, Fig 4.cg.6]

Dimensionality reduction

- attribute aggregation
 - derive low-dimensional target space from high-dimensional measured space
 - use when you can't directly measure what you care about
 - true dimensionality of dataset conjectured to be smaller than dimensionality of measurements
 - latent factors, hidden variables

data: 9D measured space → DR → derived data: 2D target space

Dimensionality reduction for documents

Task 1: In HD data → Out 2D data

Task 2: In 2D data → Out Scatterplot Clusters & points

Task 3: In Scatterplot Clusters & points → Out Labels for clusters

Dimensionality vs attribute reduction

- vocab use in field not consistent
 - dimension/attribute
- attribute reduction: reduce set with filtering
 - includes orthographic projection
- dimensionality reduction: create smaller set of new dims/attribs
 - typically implies dimensional aggregation, not just filtering
 - vocab: projection/mapping

- A Guide to Visual Multi-Level Interface Design From Synthesis of Empirical Study Evidence. Lam and Munzner. Synthesis Lectures on Visualization Series, Morgan Claypool, 2010.

18

Embed: Focus+Context

- combine information within single view
- elide
 - selectively filter and aggregate
- superimpose layer
 - local lens
- distortion design choices
 - region shape: radial, rectilinear, complex
 - how many regions: one, many
 - region extent: local, global
 - interaction metaphor

Embed

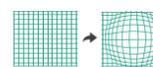

→ Elide Data

→ Superimpose Layer

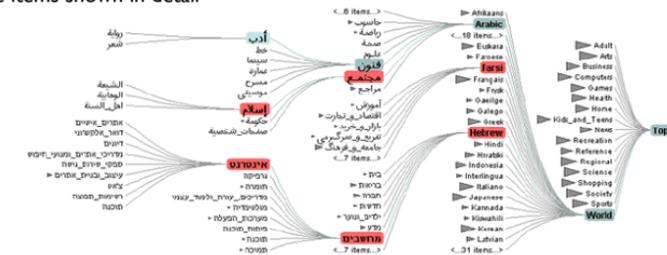

→ Distort Geometry

Idiom: DOITrees Revisited

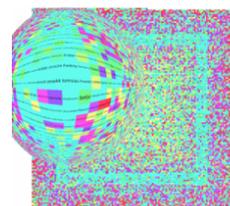

- elide
 - some items dynamically filtered out
 - some items dynamically aggregated together
 - some items shown in detail

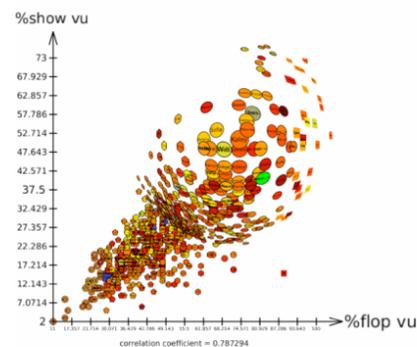

[DOITrees Revisited: Scalable, Space-Constrained Visualization of Hierarchical Data. Heer and Card. Proc. Advanced Visual Interfaces (AVI), pp. 421–424, 2004.] 20

Idiom: Fisheye Lenses

- distort geometry
 - shape: radial
 - focus: single extent
 - extent: local
 - metaphor: draggable lens

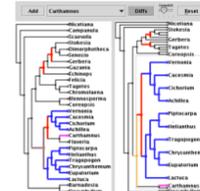

<http://tulip.labs.fi.it/viscomp/24/node331>
<http://tulip.labs.fi.it/viscomp/24/node371>

21

Idiom: Stretch and Squish Navigation

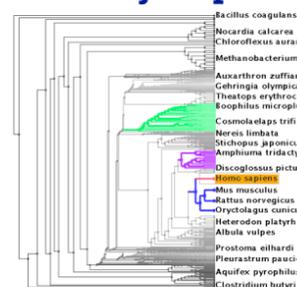

- distort geometry
 - shape: rectilinear
 - foci: multiple
 - impact: global
 - metaphor: stretch and squish, borders fixed

[TreeJuxtaposer: Scalable Tree Comparison Using Focus+Context With Guaranteed Visibility. Munzner, Guimbretiere, Tasiran, Zhang, and Zhou. ACM Transactions on Graphics (Proc. SIGGRAPH) 22:3 (2003), 453–462.]

22

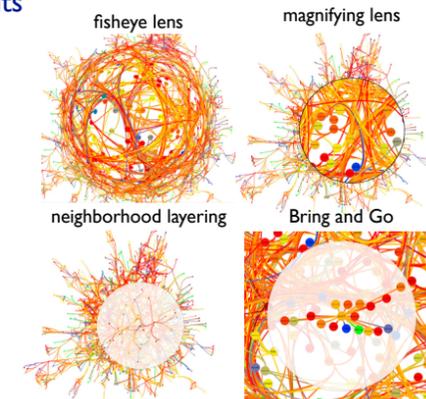

System: TreeJuxtaposer

22

Distortion costs and benefits

- benefits
 - combine focus and context information in single view
- costs
 - length comparisons impaired
 - network/tree topology comparisons unaffected: connection, containment
 - effects of distortion unclear if original structure unfamiliar
 - object constancy/tracking maybe impaired

[Living Flows: Enhanced Exploration of Edge-Bundled Graphs Based on GPU-Intensive Edge Rendering. Lambert, Auber, and Melançon. Proc. Intl. Conf. Information Visualisation (IV), pp. 523–530, 2010.] 23

24

Next Time

- Thu Mar 2, to read
 - VAD Ch. 15: Case Studies
 - several examples of analysis with full framework
- reminders:
 - meetings due by Fri Mar 3, 5pm
 - proposals due by Mon Mar 6, 5pm

25
