

# Wrapup: Research Papers and Process

**Tamara Munzner**  
Department of Computer Science  
University of British Columbia

CPSC 547, Information Visualization  
26 November 2019

<http://www.cs.ubc.ca/~tmm/courses/547-19>

## Final presentations timing

- final presentations timing
  - Original plan: 1-5 Tue (26)
    - ML final: 12-2?? 12:30-3:30??
  - Best availability: 3-7 Tue (28)
  - Worse: Mon (21), Wed (24), Thu (20)
- reminder
  - we do have class next time (Tue Dec 3), since started a week late
  - peer reviews 2
    - do remember to submit your peer review slides
    - for this one, also upload notes as comments

## Today

- finalize final presentation slot: Tue Dec 10 3-7pm
- presentations
- final papers and final presentations
  - course paper vs research paper expectations
- writing infovis papers: pitfalls to avoid
  - Process and Pitfalls in Writing Information Visualization Research Papers. *Tamara Munzner. In: Information Visualization: Human-Centered Issues and Perspectives. Andreas Kerren, John T. Stasko, Jean-Daniel Fekete, Chris North, eds. Springer LNCS Volume 4950, p 134-153, 2008.*
- other research pitfalls and process
  - review reading, review writing, conference talks
- reproducible and replicable research

## Final Papers & Presentations

## Final reports

- PDF, use InfoVis templates [http://junctionpublishing.org/vgtc/Tasks/camera\\_tvccg.html](http://junctionpublishing.org/vgtc/Tasks/camera_tvccg.html)
  - your choice to use Latex/Word/whatever
- no length cap: illustrate freely with screenshots!
  - design study / technique: aim for at least 6-8 pages
  - analysis / survey: aim for at least 15-20 pages
- ok to re-use text from proposal, interim writeup
- encourage looking at my writing correctness and style guidelines
  - <http://www.cs.ubc.ca/~tmm/writing.html>
- strongly encourage looking at previous examples
  - [www.cs.ubc.ca/~tmm/courses/547-19/projectdesc.html#examp](http://www.cs.ubc.ca/~tmm/courses/547-19/projectdesc.html#examp)
  - Example Past Projects
  - browse 2015, 2014, ... reports

## Course requirements vs research paper standards

- research novelty **not** required
- mid-level discussion of implementation **is** required
  - part of my judgement is about how much work you did
  - high level: what toolkits etc did you use
  - medium level: what pre-existing features did you use/adapt
  - low level **not** required: manual of how to use, data structure details
- design justification **is** required
  - (unless analysis/survey project)
  - different in flavour between design study projects and technique projects
  - technique explanation alone is not enough
- publication-level validation **not** required
  - user studies, extensive computational benchmarks, utility to target audience

## Report structure: General

- low level: necessary but not sufficient
  - correct grammar/spelling
  - sentence flow
- medium level: order of explanations
  - build up ideas
- high through low level: why/what before how
  - paper level
    - motivation: why should I care
    - overview: what did you do
    - details: how did you do it
  - section level
    - overview then details
  - sometimes subsection or paragraph level

## Sample outlines: Design study

- [www.cs.ubc.ca/~tmm/courses/547-17F/projectdesc.html#examp](http://www.cs.ubc.ca/~tmm/courses/547-17F/projectdesc.html#examp)
- abstract
  - concise summary of your project
  - do not include citations
- introduction
  - give big picture, establish scope, some background material might be appropriate
- related work
  - include both work aimed at similar problems and similar solutions
  - **no requirement for research novelty, but still frame how your work relates to it**
  - cover both academic and relevant non-academic work
  - you might reorder to have this section later

## Sample outlines: Design study II

- data and task abstractions
  - analyze your domain problem according to book framework (what/why)
  - include both domain-language descriptions and abstract versions
  - could split into data vs task, then domain vs abstract - or vice versa!
  - typically data first then task, so that can refer to data abstr within task abstr
- solution
  - describe your solution idiom (visual encoding and interaction)
  - analyze it according to book framework (how)
  - justify your design choices with respect to alternatives
  - if significant algorithm work, discuss algorithm and data structures

## Sample outlines: Design study III

- **implementation**
  - **medium-level implementation description**
    - specifics of what you wrote vs what existing libraries/toolkits/components do
  - **breakdown of who did what work**
- **results**
  - include scenarios of use illustrated with multiple screenshots of your software
    - walk reader through how your interface succeeds (or falls short) of solving intended problem
    - report on evaluation you did (eg deployment to target users, computational benchmarks)
    - screenshots should be png (lossless compression) not jpg (lossy compression)!
- **discussion and future work**
  - reflect on your approach: strengths, weaknesses, limitations
  - lessons learned: what do you know now that you didn't when you started?
  - future work: what would you do if you had more time?

## Sample outlines: Design study IV

- **conclusions**
  - summarize what you've done
  - different than abstract since reader has seen all the details
- **bibliography**
  - make sure to use real references for work that's been published academically
    - not just URL
    - check arxiv papers, many have forward link to final publication venue - use that too!
  - be consistent! most online sources require cleanup including IEEE/ACM DLs
    - do pay attention to my instructions for checking reference consistency
      - <http://www.cs.ubc.ca/~tmm/writing.html#refs>

## Sample outlines: Technique (diffs)

- *Abstract, Introduction (same as above)*
- *Related Work*
  - big focus on similar solutions, some discussion of similar problems (same task/data combo)
- *Data and Task Abstractions*
  - much shorter than the corresponding one for design studies, framing context not core contrib
- *Solution*
  - describing proposed idiom exactly, not justifying its use for particular domain problem
  - as above, analyze in terms of design choices, justify why appropriate vs alternatives
- *Implementation (same as above)*
- *Results*
  - less emphasis on scenarios with particular target users
  - more emphasis on characterizing the breadth of possible uses
  - still definitely include screenshots of the system in action
- *Discussion / Future Work, Conclusions, Bibliography (same as above)*

## Sample outlines: Survey (diffs)

- *Abstract (same as above)*
- *Introduction*
  - discuss the scope of what you're covering, why it's interesting/reasonable partition compared to visualization as a whole
- *Related Work*
  - **only** previous surveys
    - focus on how your work is similar to or different from them, especially wrt coverage
- *Main*
  - break up into sections based on your own synthesis of themes of work covered
  - you might want a Background section at the start if domain-focused survey
    - where there's important vocabulary/ideas to establish before diving into main discussion
  - analyze visualizations proposed in these papers in terms of what/why/how framework
    - include images from papers
- *Discussion / Future Work, Conclusions, Bibliography (same as above)*

## Sample outlines: Analysis (diffs)

- *Abstract, Intro (same as above)*
- *Domain Background*
  - relevant vocabulary/ideas, your own background/connection
- *Data/Task Abstraction, Related Work (same as above)*
- *Methods and Tools*
  - how has it previously/normally been analyzed
  - explain what idioms you chose and justify those choices; same for tools
- *Analysis*
  - present results of your visual data analysis, including screenshots of tools in action
  - specifics of what you learned in terms of the domain problem
  - your reflection on how visualization choices helped you understand it
  - strengths/weaknesses of your approach (idioms and tools)
    - can be interleaved or in separate section at end
- *Discussion / Future Work, Conclusions, Bibliography (same as above)*

## Sample outlines: Other types

- see page for implementation project types
  - implementation
    - [www.cs.ubc.ca/~tmm/courses/547-19/projectdesc.html#outlines](http://www.cs.ubc.ca/~tmm/courses/547-19/projectdesc.html#outlines)
- *interactive explanations*
  - meet with me in advance to discuss

## Report marking

- required: at least material I've listed
  - you may include more material, you may choose alternate orderings
- probable marking scheme (may change!)
  - design study & technique: 12.5% each for
    - intro, related work, abstractions, solution, implementation, results, discussion, style
    - style: 10% main, 2.5% bibliography
  - survey: intro (10%), relwork (10%), main (60%), style (20%)
  - analysis: intro/domain (8%), abstr (8%), relwork (8%), methods/tools (8%), analysis (52%), discussion (8%), style (8%)
- reminder: project content is 60% of entire project mark
  - report is 25%, presentation is 15%

<h2>Code /Video</h2> <ul style="list-style-type: none"> <li>required: submit your code <ul style="list-style-type: none"> <li>–so I can see what you’ve done, but I will not post</li> <li>–include README file at root with brief roadmap/overview of organization <ul style="list-style-type: none"> <li>• which parts are your code vs libraries</li> <li>• how to compile and run</li> <li>• I do not necessarily expect your code compiles on my machine</li> </ul> </li> </ul> </li> <li>encouraged but not required <ul style="list-style-type: none"> <li>–submit live demo URL</li> <li>–open-source your code (if so, fine to just send me that URL)</li> <li>– submit supporting video <ul style="list-style-type: none"> <li>• with or without voiceover</li> <li>• very nice to have later; software bitrot makes demos not last forever!</li> </ul> </li> <li>–can be same or different from what you show in final presentation</li> </ul> </li> </ul>	17
---	----

<h2>Showcase image</h2> <ul style="list-style-type: none"> <li>showcase image for projects page <ul style="list-style-type: none"> <li>–300x300 image</li> <li>–call it showcase.png or showcase.jpg</li> </ul> </li> </ul>	18
---	----

<h2>Logistics</h2> <ul style="list-style-type: none"> <li>Assignments: Final Presentations on Canvas <ul style="list-style-type: none"> <li>–upload due Tue Dec 10 6pm</li> <li>–(upload due 1 hr before presentations if using my laptop)</li> </ul> </li> <li>Assignments: Final Report on Canvas <ul style="list-style-type: none"> <li>–upload due Fri Dec 13 11:59pm <ul style="list-style-type: none"> <li>• required &amp; posted: report, showcase image</li> <li>• required but not posted: code including README</li> <li>• encouraged: live demo URL, video</li> </ul> </li> </ul> </li> </ul>	19
---	----

<h2>Final presentations</h2> <ul style="list-style-type: none"> <li>context <ul style="list-style-type: none"> <li>–CS department will be invited, also feel free to invite others</li> <li>–refreshments will be served, two short breaks</li> <li>–order: alphabetical by first name</li> </ul> </li> <li>code freeze <ul style="list-style-type: none"> <li>–no additional work on project after presentation deadline</li> <li>–additional three days to get it all written down coherently for final report</li> </ul> </li> </ul>	20
---	----

<h2>Final presentations:Tue Dec 13 3-7 (!) FSC 2300A</h2> <ul style="list-style-type: none"> <li>length (19 projects) <ul style="list-style-type: none"> <li>–14 min for 3-person teams, 12 min for 2-person teams, 10 min for 1-person teams</li> <li>–includes questions: aim for 1 min (brief questions only)</li> </ul> </li> <li>session structure <ul style="list-style-type: none"> <li>–order alphabetical by first name, as on project page [shift if conflicts]</li> <li>–2 breaks, between each set of 6 presentations</li> <li>–dept invited, friends welcome, refreshments served</li> </ul> </li> <li>presentation structure <ul style="list-style-type: none"> <li>–slides required (<i>remember slide numbers!</i>)</li> <li>–demo or video encouraged <ul style="list-style-type: none"> <li>• if plan is for demo, screenshots and/or video for backup strongly encouraged <ul style="list-style-type: none"> <li>–but do practice, demos eat up time!</li> </ul> </li> <li>–should be standalone <ul style="list-style-type: none"> <li>• don't assume audience has read proposal or updates (or remembers your pitch)</li> </ul> </li> </ul> </li> </ul> </li> <li>slide upload <ul style="list-style-type: none"> <li>–upload to Canvas Assignments: Final Presentations</li> <li>–post your slides by 6pm if using your laptops (best), or by 11am if using mine</li> </ul> </li> </ul>	21
---	----

<h2>Final presentations marking</h2> <ul style="list-style-type: none"> <li>last year’s template <ul style="list-style-type: none"> <li>–Intro/Framing:</li> <li>–Main:</li> <li>–Limitations/Critique/Lessons:</li> <li>–Slides:</li> <li>–Style:</li> <li>–Demo/Video:</li> <li>–Timing:</li> <li>–Question Handling:</li> </ul> </li> </ul>	22
--	----

<h2>Marking: Course overall</h2> <ul style="list-style-type: none"> <li>50% Project, summative assessment at end <ul style="list-style-type: none"> <li>–15% Final Presentation</li> <li>–25% Final Report</li> <li>–60% Content <ul style="list-style-type: none"> <li>–(penalty to 20% for missed Milestones, pass/fail) <ul style="list-style-type: none"> <li>• pitch, proposal, peer review 1, peer review 2</li> </ul> </li> </ul> </li> </ul> </li> <li>20% Presentations <ul style="list-style-type: none"> <li>–75% Content: <ul style="list-style-type: none"> <li>• Summary 50%, Analysis 25%, Critique 25%</li> </ul> </li> <li>–25% Delivery: <ul style="list-style-type: none"> <li>• Presentation Style 50%, Slide Quality 50%</li> </ul> </li> </ul> </li> <li>30% Participation <ul style="list-style-type: none"> <li>–60% Written Questions <ul style="list-style-type: none"> <li>• 6 weeks, 10% each</li> </ul> </li> <li>–40% In-Class Discussion &amp; Group Work (pass/fail) <ul style="list-style-type: none"> <li>• 4 weeks, 10% each</li> </ul> </li> </ul> </li> <li>marking by buckets <ul style="list-style-type: none"> <li>–great 100%</li> <li>–good 89%</li> <li>–ok 78%</li> <li>–poor 67%</li> <li>–zero 0%</li> </ul> </li> </ul>	23
--	----

<h2>Come talk!</h2> <ul style="list-style-type: none"> <li>encourage meeting with me to get advice/feedback before final present <ul style="list-style-type: none"> <li>–chance to get feedback while you can still act on it</li> <li>–optional, not mandatory</li> <li>–do send email to schedule, can't meet with all 19 teams in last few days!</li> </ul> </li> </ul>	24
--	----

<h1>Process &amp; Pitfalls for InfoVis Papers</h1>	25
--	----

<h2>Idiom pitfalls</h2> <ul style="list-style-type: none"> <li>Unjustified Visual Encoding <ul style="list-style-type: none"> <li>–should justify why visual encoding design choices appropriate for problem</li> <li>–prerequisite: clear statement of problem and encoding!</li> </ul> </li> <li>Hammer In Search of Nail <ul style="list-style-type: none"> <li>–should characterize capabilities of new technique if proposed in paper</li> </ul> </li> <li>Color Cacophony <ul style="list-style-type: none"> <li>–avoid blatant disregard for basic color perception issues <ul style="list-style-type: none"> <li>• huge areas of highly saturated color</li> <li>• categorical color coding for 15+ category levels</li> <li>• red/green without luminance differences</li> <li>• encoding 3 separate attributes with RGB</li> </ul> </li> </ul> </li> <li>Rainbows Just Like In The Sky <ul style="list-style-type: none"> <li>–avoid hue for ordered attribs, perceptual nonlinearity along rainbow gradient</li> </ul> </li> </ul>	26
---	----

<h2>Later pitfalls: Strategy</h2> <ul style="list-style-type: none"> <li>What I Did Over My Summer Vacation <ul style="list-style-type: none"> <li>–don't focus on effort rather than contribution</li> <li>–don't be too low level, it's not a manual</li> </ul> </li> <li>Least Publishable Unit <ul style="list-style-type: none"> <li>–avoid tiny increment beyond (your own) previous work</li> <li>–bonus points: new name for old technique</li> </ul> </li> <li>Dense As Plutonium <ul style="list-style-type: none"> <li>–don't cram in so much content that can't explain why/what/how <ul style="list-style-type: none"> <li>• fails reproducibility test</li> </ul> </li> </ul> </li> <li>Bad Slice and Dice <ul style="list-style-type: none"> <li>–two papers split up wrong</li> <li>–neither is standalone, yet both repeat</li> </ul> </li> </ul>	27
--	----

<h2>Later pitfalls:Tactics</h2> <ul style="list-style-type: none"> <li>Stealth Contributions <ul style="list-style-type: none"> <li>–don't leave them implicit, it's your job to tell reader explicitly!</li> <li>–consider carefully, often different from original project goals</li> </ul> </li> </ul>	28
---	----

<h2>Contributions in research papers</h2> <ul style="list-style-type: none"> <li>what are your research contributions? <ul style="list-style-type: none"> <li>–what can we do that wasn't possible before?</li> <li>–how can we do something better than before?</li> <li>–what do we know that was unknown or unclear before?</li> </ul> </li> <li>determines everything <ul style="list-style-type: none"> <li>–from high-level message to which details worth including</li> </ul> </li> <li>often not obvious <ul style="list-style-type: none"> <li>–diverged from original goals, in retrospect</li> </ul> </li> <li>state them explicitly and clearly in the introduction <ul style="list-style-type: none"> <li>–don't hope reviewer or reader will fill them in for you</li> <li>–don't leave unsaid should be obvious after close reading of previous work</li> <li>–goal is clarity, not overselling (limitations typically later, in discussion section)</li> </ul> </li> </ul>	29
---	----

<h2>Later pitfalls:Tactics</h2> <ul style="list-style-type: none"> <li>Stealth Contributions <ul style="list-style-type: none"> <li>–don't leave them implicit, it's your job to tell reader explicitly!</li> <li>–consider carefully, often different from original project goals</li> </ul> </li> <li>I Am So Unique <ul style="list-style-type: none"> <li>–don't ignore previous work</li> <li>–both on similar problems and with similar solutions</li> </ul> </li> <li>Enumeration Without Justification <ul style="list-style-type: none"> <li>–“X did Y” not enough</li> <li>–must say why previous work doesn't solve your problem</li> <li>–what limitations of their does your approach fix?</li> </ul> </li> <li>I Am Utterly Perfect <ul style="list-style-type: none"> <li>–no you're not; discussion of limitations makes paper stronger!</li> </ul> </li> </ul>	30
---	----

<h2>Later pitfalls: Results</h2> <ul style="list-style-type: none"> <li>Unfettered By Time <ul style="list-style-type: none"> <li>–choose level of detail for performance numbers</li> <li>–detailed graphs for technique papers, high-level for design &amp; eval papers</li> </ul> </li> <li>Straw Man Comparison <ul style="list-style-type: none"> <li>–compare appropriately against state-of-the-art algorithms</li> <li>–head-to-head hardware is best (re-run benchmarks yourself, all on same machine)</li> </ul> </li> <li>Tiny Toy Datasets <ul style="list-style-type: none"> <li>–compare against state-of-the-art dataset sizes for technique (small ok for eval)</li> </ul> </li> <li>But My Friends Liked It <ul style="list-style-type: none"> <li>–asking labmates not convincing if target audience is domain experts</li> </ul> </li> <li>Unjustified Tasks <ul style="list-style-type: none"> <li>–use ecologically valid user study tasks: convincing abstraction of real-world use</li> </ul> </li> </ul>	31
--	----

<h2>Final pitfalls: Style</h2> <ul style="list-style-type: none"> <li>Deadly Detail Dump <ul style="list-style-type: none"> <li>–explain <i>how</i> only <b>after</b> <i>what</i> and <i>why</i>; provide high-level framing before low-level detail</li> </ul> </li> <li>Story-Free Captions <ul style="list-style-type: none"> <li>–optimize for flip-through-pictures skimming</li> </ul> </li> <li>My Picture Speaks For Itself <ul style="list-style-type: none"> <li>–explicitly walk them through images with discussion</li> </ul> </li> <li>Grammar Is Optional <ul style="list-style-type: none"> <li>–good low-level flow is necessary (but not sufficient), native speaker check good if ESL</li> </ul> </li> <li>Mistakes Were Made <ul style="list-style-type: none"> <li>–don't use passive voice, leaves ambiguity about actor <ul style="list-style-type: none"> <li>• your research contribution or done by others?</li> </ul> </li> </ul> </li> </ul>	32
--	----

## Final pitfalls: Style 2

- Jargon Attack
  - avoid where you can, define on first use
    - all acronyms should be defined
- Nonspecific Use Of Large
  - quantify! hundreds? 10K? 100K? millions? billions?...

33

## Final pitfalls: Submission

- Slimy Simultaneous Submission
  - often detected when same reviewer for both
  - instant dual rejection, often multi-conference blacklist
- Resubmit Unchanged
  - respond to previous reviews: often get reviewer overlap, irritated if ignored

34

## Generality

- encoding: visualization specific
- strategy: all research
- tactics: all research
- results: visualization specific
- style: all research, except
  - Story-Free Captions, My Picture Speaks For Itself

35

## Research Process & Pitfalls

### Review reading pitfalls

- Reviewers Were Idiots
  - rare: insufficient background to judge worth
  - if reviewer didn't get your point, many readers won't
  - your job: rewrite so clearly that nobody can misunderstand
- Reviewers Were Threatened By My Brilliance
  - seldom: unduly harsh since intimately familiar with area
- I Just Know Person X Wrote This Review
  - sometimes true, sometimes false
  - don't get fixated, try not to take it personally
- It's The Writing Not The Work
  - sometimes true: bad writing can doom good work (good writing may save borderline)
  - sometimes false: weak work common! reinvent the wheel worse than previous one

37

### Review writing pitfalls

- Uncalibrated Dismay
  - remember you've only read the best of the best!
  - most new reviewers are overly harsh
- It's Been Done, Full Stop
  - you must say who did it in which paper, full citation is best
- You Didn't Cite Me
  - stop and think whether it's appropriate
  - be calm, not petulant
- You Didn't Channel Me
  - don't compare against paper you would have written
    - review the paper they submitted

38

### Conference talk pitfalls

- Results As Dessert
  - don't save until the end as a reward for the stalwart!
  - showcase early to motivate
- A Thousand Words, No Pictures
  - aggressively replace words with illustrations
  - most slides should have a picture
- Full Coverage Or Bust
  - cannot fit all details from paper
  - communicate big picture
  - talk as advertising: convince them it's worth their time to read paper!

### Paper writing process suggestions

- pre-paper talk
  - write and give talk first, as if presenting at conference
  - iterate on talk slides to get structure, ordering, arguments right
  - then create paper outline from final draft of slides
    - encourages concise explanations of critical ideas, creation of key diagrams
    - avoids wordsmithing digressions and ratholes
    - easier to cut slides than prose you agonized over
- pre-paper/practice talk feedback session: at least 2-3x talk length
  - global comments, then slide by slide detailed discussion
  - nurture culture of internal critique (build your own critique group if necessary)
- have non-authors read paper before submitting
  - internal review can catch many problems
  - ideally group feedback session as above

39

## Reproducible and Replicable Research

### Reproducible research

- 5: 15 minutes with free tools
- 4: 15 minutes with proprietary tools
- 3: considerable effort
- 2: extreme effort
- 1: cannot seem to be reproduced
- 0: cannot be reproduced

[Vandewalle, Kavacevic and Vetterli. Reproducible Research in Signal Processing - What, why, and how. IEEE Signal Processing Magazine, 26(3):37-47, May 2009.]

42

### Why bother with reproducibility

- moral high ground
  - for Science!
- enlightened self-interest
  - make your own life easier
  - you'll be cited more often by academics
  - your work is more likely to be used by industry

### Reproducibility: Levels to consider

- paper
  - post it online
  - make sure it stays accessible when you move on to new place
  - external archives are better yet ([arxiv.org](http://arxiv.org))
- algorithm
  - well documented in paper itself
  - document further with supplemental materials
- code
  - make available as open source
  - pick right spot on continuum of effort involved, from minimal to massive
    - just put it up warts and all, minimal documentation
    - well documented and tested
    - (build a whole community - not the common case)

43

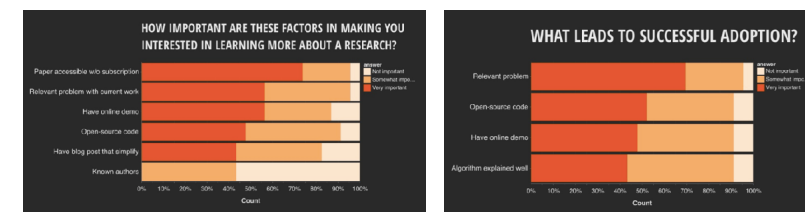

### Reproducibility: Levels to consider, cont.

- data
  - make available
    - technique/algorithm: data used by system
      - tricky issue in visualization: data might not be yours to release!
    - evaluation: user study results
      - ethics approval possible if PII (personally identifiable information) sanitized, needs advance planning
- parameters
  - how exactly to regenerate/produce figures, tables
  - example: <http://www.cs.utah.edu/~gk/papers/vis03/>

45

### View from industry

- Increasing the Impact of Visualization Research panel, VIS 2017
  - Krist Wongsuphasawat, Data Visualization Scientist, Twitter

<https://www.slideshare.net/kristw/increasing-the-impact-of-visualization-research>

46

### Replication: crisis in psychology, medicine, etc

- early rumblings left me with (ignorable) qualms
  - papers: Is most published research false?, Storks Deliver Babies ( $p = 0.008$ ), The Earth is spherical ( $p < 0.05$ ), False-Positive Psychology
- groundswell of change for what methods are considered legitimate
  - out: QRPs (questionable research practices)
    - p-hacking / p-value fishing / data dredging
    - Hypothesizing After Results are Known (HARKing)
  - in
    - replication
    - pre-registration
  - brouhaha with bimodal responses
    - some people doubling down and defending previous work
    - many willing to repudiate (their own) earlier styles of working

### Remarkable introspection on methods

- thoughtful willingness to change standards of field
  - Andrew Gelman's commentary on the Susan Fiske article
    - <http://andrewgelman.com/2016/09/21/what-has-happened-down-here-is-the-winds-have-changed/>
  - Simine Vazire's entire Sometimes I'm Wrong blog
    - <http://sometimesimwrong.typepad.com/>
    - especially posts on topic Scientific Integrity
  - Joe Simmons Data Colada blog post What I Want Our Field to Prioritize
    - <http://datacolada.org/53/>
  - Dana Carvey's brave statement on her previous power pose work
    - [http://faculty.haas.berkeley.edu/dana\\_carney/pdf\\_My%20position%20on%20power%20poses.pdf](http://faculty.haas.berkeley.edu/dana_carney/pdf_My%20position%20on%20power%20poses.pdf)

47

## When and how will this storm hit visualization?

- they're ahead of us
  - they have some paper retractions
    - we don't (yet) have any retractions for methodological considerations
  - they agonize about difficulty of getting failure-to-replicate papers accepted
    - we hardly ever even try to do such work
  - they are a much older field
    - we're younger: might our power hierarchies thus be less entrenched??...
  - they are higher profile
    - we don't have vis research results appear regularly in major newspapers/magazines
  - they have rich fabric of blogs as major drivers of discussion
    - crosscutting traditional power hierarchies
    - we have far fewer active bloggers
- replication crisis was focus of BELIV 2018 workshop at IEEE VIS
  - evaluation and BEyond - methodoLogical approaches for Visualization
