

A NEW CITY MAP

VISUALIZING OUR CITY ROADWAYS

David Chen

Hongyang Yang

Madison Lore

Niels Semb

Land Acknowledgement

We are gathered on the traditional, ancestral and unceded territories of the Musqueam (x^wməθk^wəy̓əm) Nation

**Our roads shape
our neighborhood**

**Our neighborhoods
shape us**

We seek to understand how to capture
this relationship by using street maps
for efficient, tailored abstract art

Motivation

- Cartographical art on the market is often costly and quite impersonal
- Consumers often times have difficulty finding art tailored to precise geographical locations
- Maps are used more as decorative icons or to help navigate rather than mediums of non-spatial information

Objectives

- To bridge the gap between art and cartography by using a data driven approach
- To deliver art that is accessible to a broad spectrum of users while retaining its meaningfulness
- To present a visualization that can convey the **spirit** of a given area by encoding the factors which makes it special

The Project:

Visualize the unique features of our space through artistic representation

Enjoyment

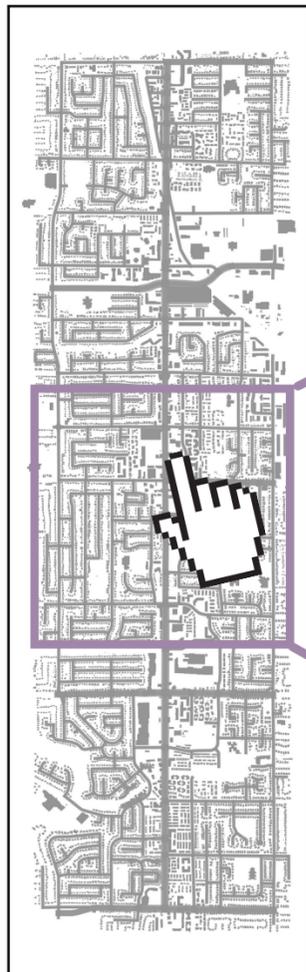

See the city through a new lens
Find neighborhoods similar to yours

Discovery

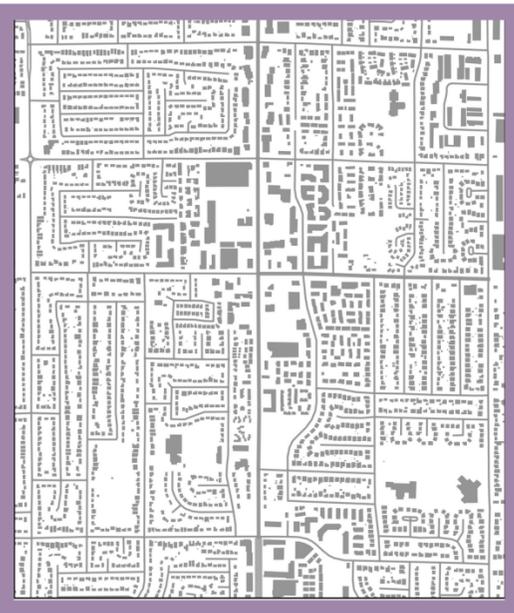

Compare neighborhoods and cities
Highlight neighborhood phenomenon

The backend

User selects a location

Roads and Amenities for the surrounding area are gathered

Information about area is encoded

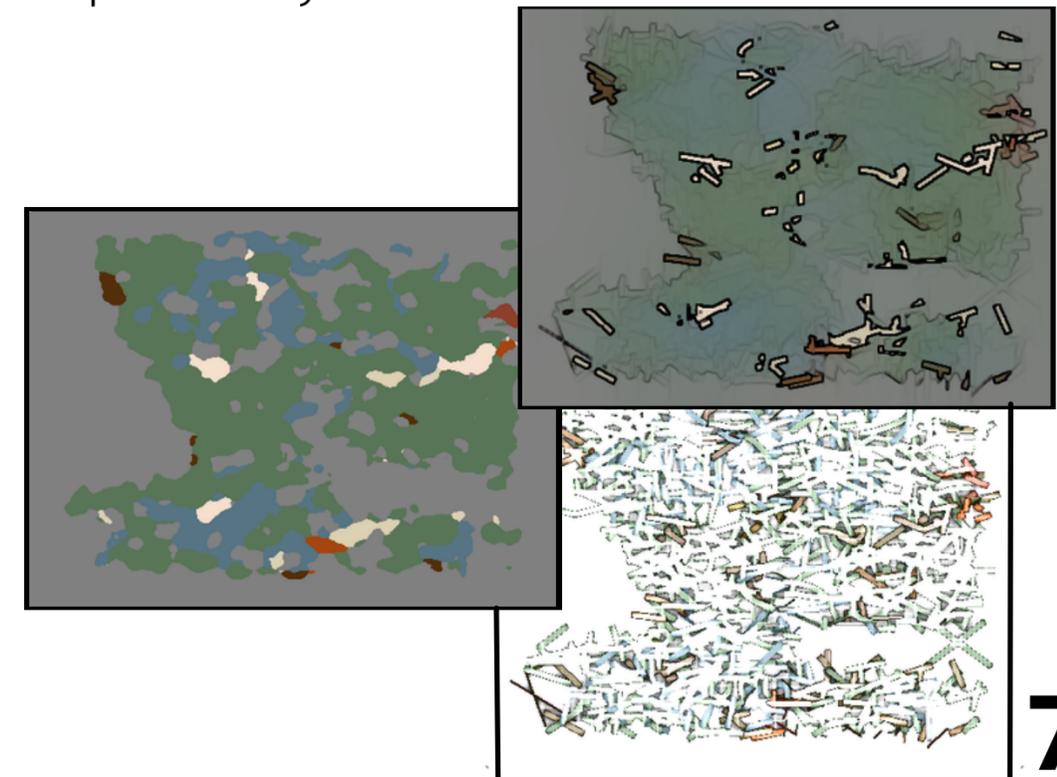

Amenities and road classifications are paired with road edges

	Grass
	Industrial
	Water
	Residential
	Commercial
	Retail
	School
	Brownfield
	Flowerbed

	Primary
	Motorway
	Residential
	Secondary
	Tertiary

Art is returned to user!

Users can choose from oil, watercolor, or color pencil style art

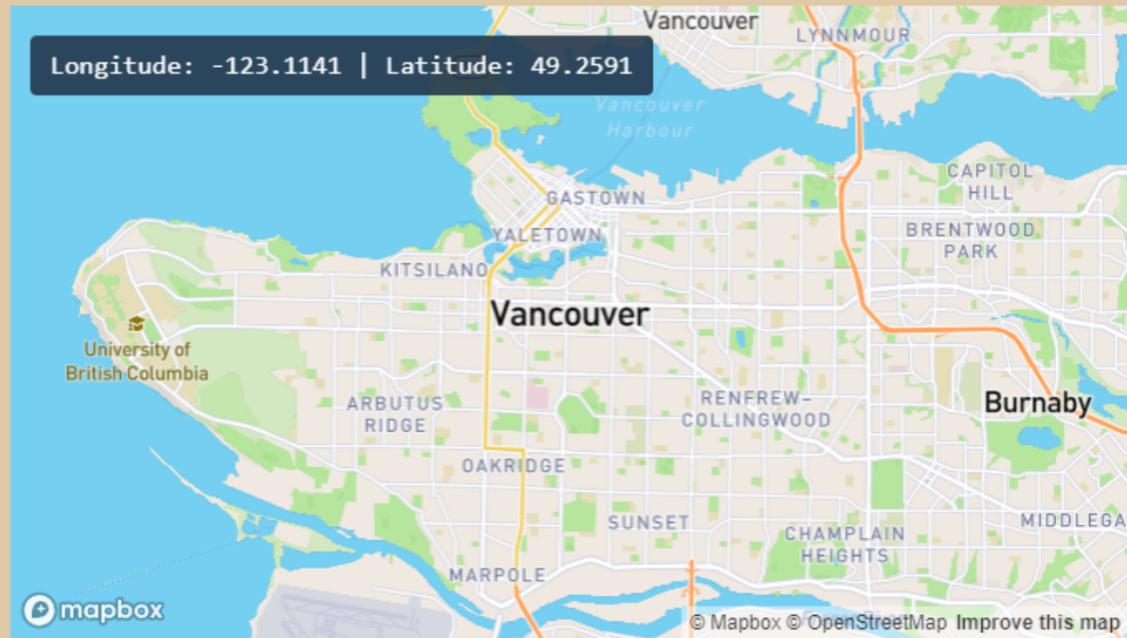

The interface

The interface

A New City Map

[Choose a City](#) [Pick a Point](#) [Boundry Cut](#)

User can select 3 modes of operation

Longitude: -123.1141 | Latitude: 49.2591

[Choose a City](#) [Pick a Point](#) [Boundry Cut](#)

City: Vancouver

Longitude: -123.1207 | Latitude: 49.2827

City interface allows user to select city to artistically render

[Choose a City](#) [Pick a Point](#) [Boundry Cut](#)

Here will the map be made as a 1 km box with the pinpoint as the center

Longitude: -123.0990 | Latitude: 49.2656

Point interface allows users to drop pin on the map to artistically render around its radius

[Choose a City](#) [Pick a Point](#) [Boundry Cut](#)

Here will the map be made out of the mapbox-boundry

JBC Robson Square, 800

Boundary interface allows users to input address or take the current map view to artistically render around its radius

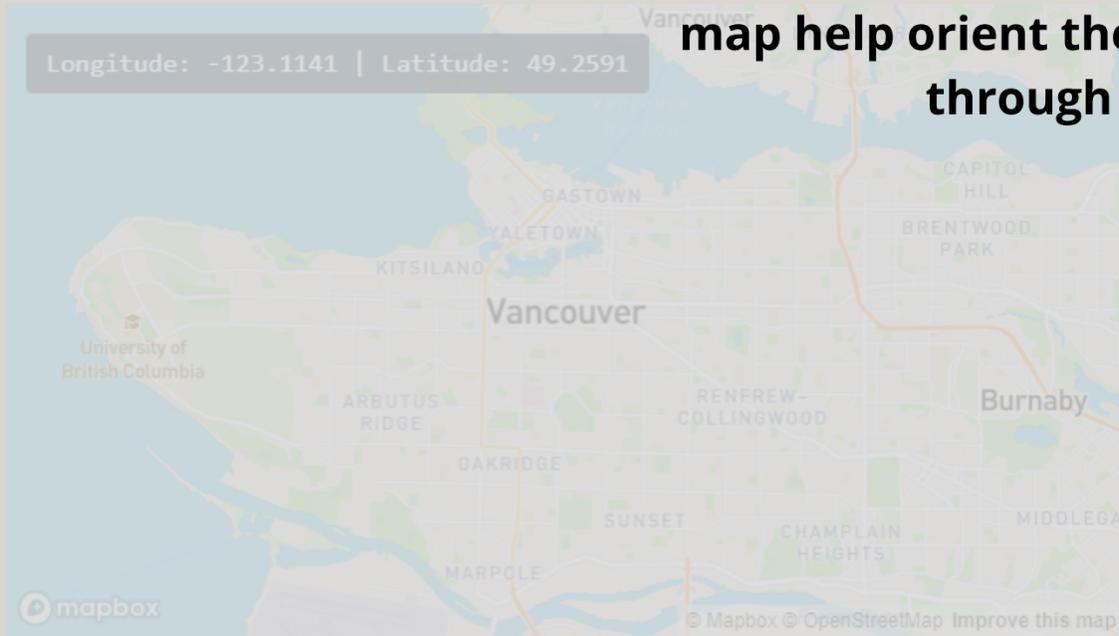

The interface

Strengths and Research Contributions

- Easily digestible representation of neighborhood culture
- Standardized visualizations for quick comparison between views
- Unique artistic rendering of city streetscapes
- Alternative method of delivering information about a place

Weaknesses and Limitations

- Trade-off between amount of information available to share and cognitive overload
- Currently only one color palette based on background research
- Longer computation time with large areas (e.g. full cities)

Future Work

- Greater granularity of amenity types (regional awareness)
- Improved computation time / dynamic rendering
- Responsive art for moving cursor around base map

A New City Map

Thank you!
