

SoundMap:

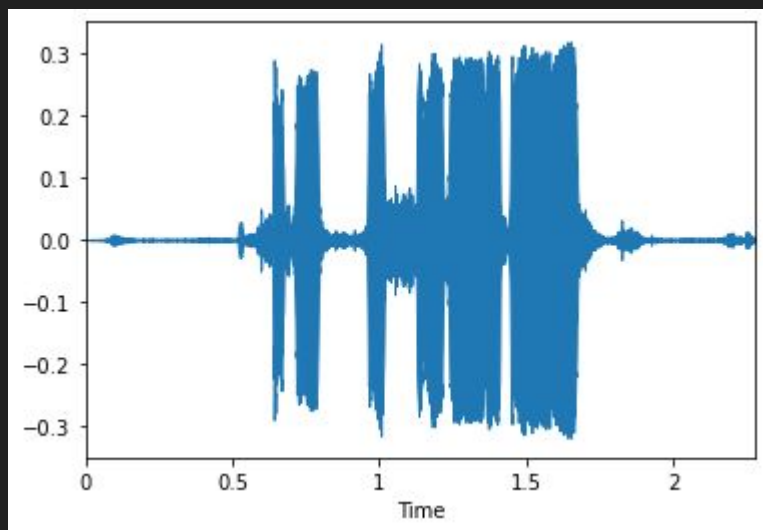

A visualization tool for large sound file datasets

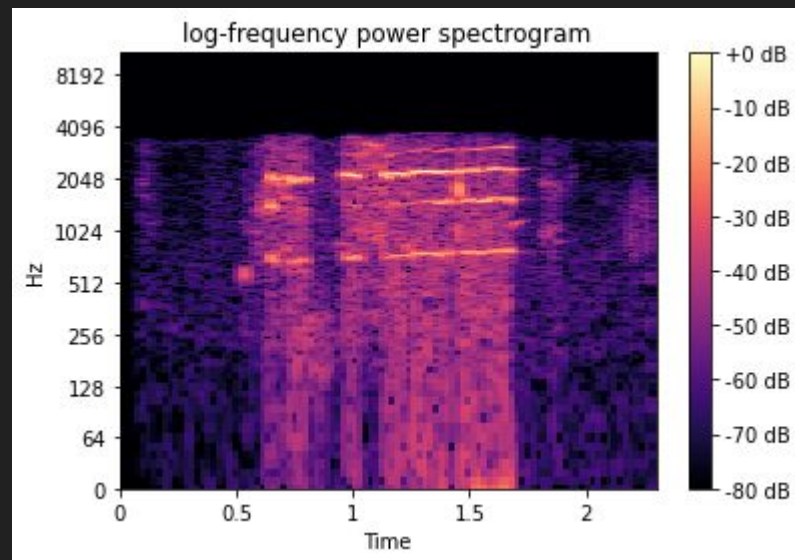

Elizabeth Reid
CPSC 547 Project Pitch
Sept. 29, 2021

Motivation

- Visualizing one sound file is easy

Waveforms

Spectrograms

Motivation

- Visualizing hundreds of sound files is hard
 - Extract and compare features
 - Generate new similarity relationships
 - Different views for levels of detail
- We also might want to visualize external information
 - Music genres
 - Soundscape elements
 - Recording devices

Proposed Solution

- Create a vis tool to help users evaluate similarities and differences among a large number of sound files
 - Scalable
 - Accessible for novice users
 - Display relevant sound features (e.g., frequency, chronemics)
 - Display relevant external features (e.g., music genre)
 - Interactions to switch between views with different levels of detail

Dataset

- CatMeows: A Publicly Available Dataset of Cat Vocalizations
 - 440 sound files
 - 21 cats, two breeds
 - Vocalizations recorded in three different scenarios
 - Three recording sessions
