

# Lecture 2: Design Studies

Information Visualization  
CPSC 533C, Fall 2006

Tamara Munzner

UBC Computer Science

14 September 2006

# Questions

- ▶ impressed by quality so far!
- ▶ want at least one question per reading
  - ▶ if <5 texts you can pick which to use for multiple Qs
- ▶ plain (ASCII) text not Word/PDF/etc

# Papers Covered

Cluster and Calendar based Visualization of Time Series Data.

Jarke J. van Wijk and Edward R. van Selow

Proc. InfoVis 99, pp 4-9

<http://www.win.tue.nl/~vanwijk/clv.pdf>

Using Multilevel Call Matrices in Large Software Projects.

Frank van Ham

Proc. InfoVis 2003, pp 227-232

<http://www.win.tue.nl/~fvham/DL/callmatrix.pdf>

Constellation: Linguistic Semantic Networks

Tamara Munzner

Interactive Visualization of Large Graphs and Networks (PhD thesis) Chapter 5, Stanford University, 2000, pp 87-122

[http://graphics.stanford.edu/papers/munzner\\_thesis](http://graphics.stanford.edu/papers/munzner_thesis)

# Design Study

- ▶ describe task
- ▶ justify solution
- ▶ refine until satisfied

# Design Study Definition

Design study papers explore the choices made when applying infovis techniques in an application area, for example relating the visual encodings and interaction techniques to the requirements of the target task. Although a limited amount of application domain background information can be useful to provide a framing context in which to discuss the specifics of the target task, the primary focus of the case study must be the infovis content. Describing new techniques and algorithms developed to solve the target problem will strengthen a design study paper, but the requirements for novelty are less stringent than in a Technique paper.

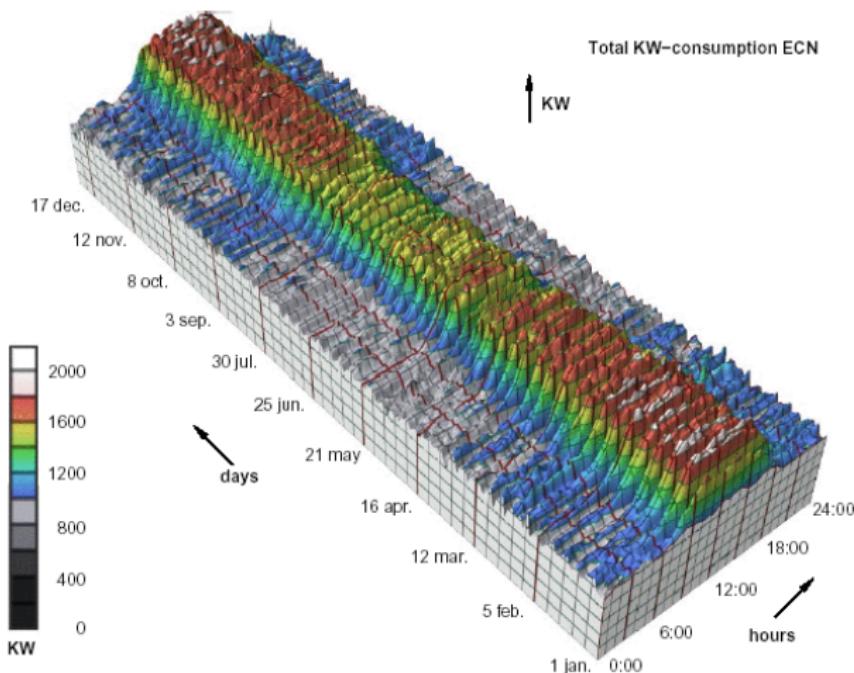

[InfoVis03 CFP, [infovis.org/infovis2003/CFP](http://infovis.org/infovis2003/CFP)]

# Cluster-Calendar, van Wijk

- ▶ data: N pairs of (value, time)
  - ▶ N large: 50K
- ▶ tasks
  - ▶ find standard day patterns
  - ▶ find how patterns distributed over year, week, season
  - ▶ find outliers from standard daily patterns
  - ▶ want overview first, then detail on demand
- ▶ possibilities
  - ▶ predictive mathematical models
    - ▶ details lost, multiscale not addressed
  - ▶ scale-space approaches (wavelet, fourier, fractal)
    - ▶ hard to interpret, known scales lost
  - ▶ 3D mountain: x hours, y value, z days
- ▶ excellent example, emulate for project writeups!

# 3D Time-series Data

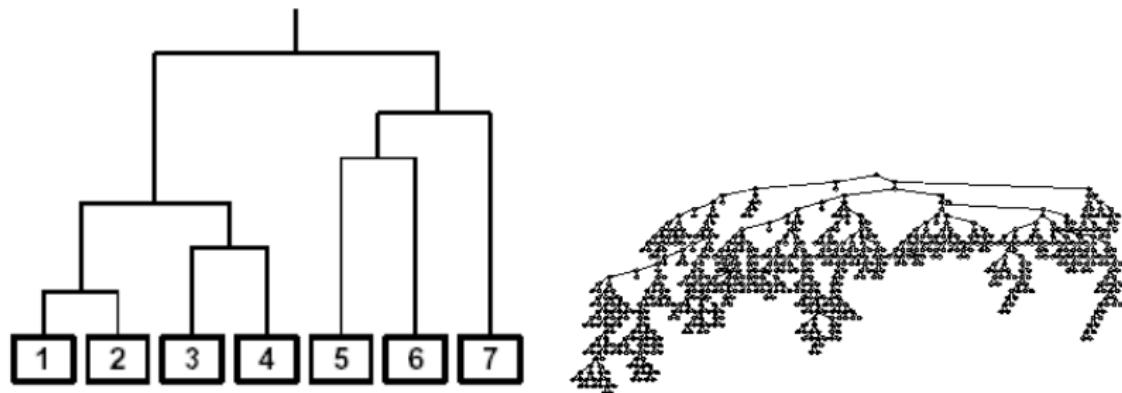

- ▶ 3D extrusion pretty but not useful
  - ▶ daily, weekly patterns hard to see

[van Wijk and van Selow, Cluster and Calender based Visualization of Time Series Data, InfoVis99, <http://www.win.tue.nl/~vanwijk/clv.pdf>]

# Hierarchical Clustering

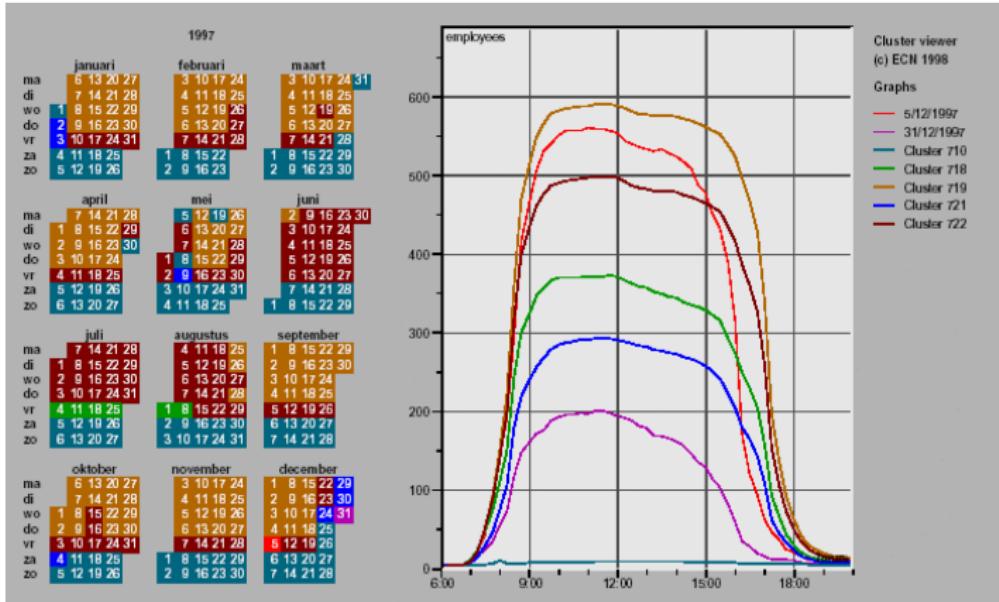

- ▶ start with all  $M$  day patterns
  - ▶ compute mutual differences, merge most similar:  $M-1$
  - ▶ continue up to 1 root cluster
- ▶ result: binary hierarchy of clusters
- ▶ choice of distance metrics
- ▶ dendrogram display common
  - ▶ but shows structure of hierarchy, not time distribution

[van Wijk and van Selow, Cluster and Calender based Visualization of Time Series Data, InfoVis99, <http://www.win.tue.nl/~vanwijk/clv.pdf>]

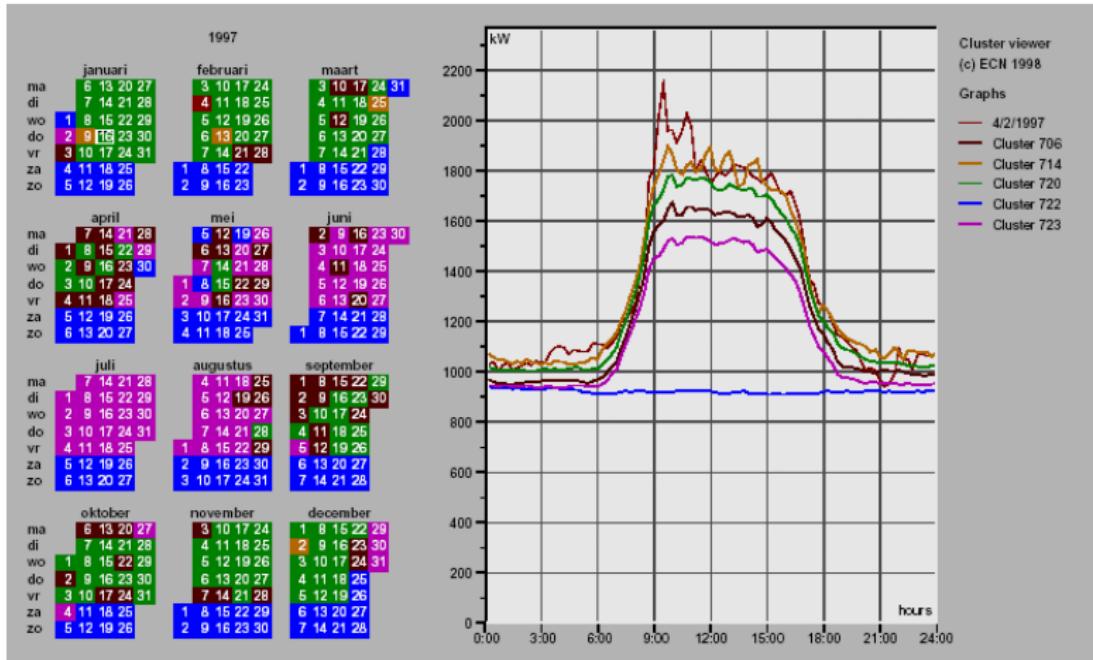

# Link Clusters and Calendar

- ▶ 2D linked clusters-calendars shows patterns
  - ▶ number of employees:
  - ▶ office hours, fridays in/and summer, school break
  - ▶ weekend/holidays, post-holiday, santa claus

[van Wijk and van Selow, Cluster and Calender based Visualization of Time Series Data, InfoVis99, <http://www.win.tue.nl/~vanwijk/clv.pdf>]

# Power Consumption

[van Wijk and van Selow, Cluster and Calender based Visualization of Time Series Data, InfoVis99, <http://www.win.tue.nl/~vanwijk/clv.pdf>]

# Lessons

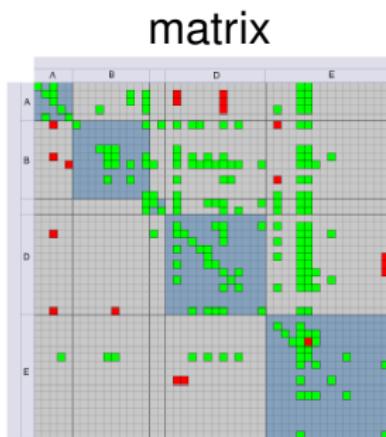

- ▶ derived space: clusters
- ▶ visual representation of time: calendar
  - ▶ linked display
  - ▶ interactive exploration
- ▶ clear task analysis guided choices
  - ▶ reject standard 3D extrusion
  - ▶ reject standard dendrogram
- ▶ critique

# Lessons

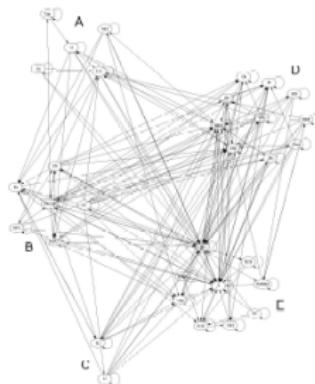

- ▶ derived space: clusters
- ▶ visual representation of time: calendar
  - ▶ linked display
  - ▶ interactive exploration
- ▶ clear task analysis guided choices
  - ▶ reject standard 3D extrusion
  - ▶ reject standard dendrogram
- ▶ critique
  - ▶ color choice not so discriminable
  - ▶ especially legend

# Multilevel Call Matrices, van Ham

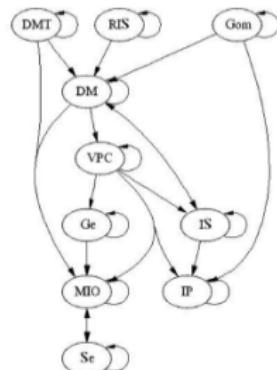

- ▶ large software project, implementation vs. spec
- ▶ link matrix vs. node network

force-directed

layered subset

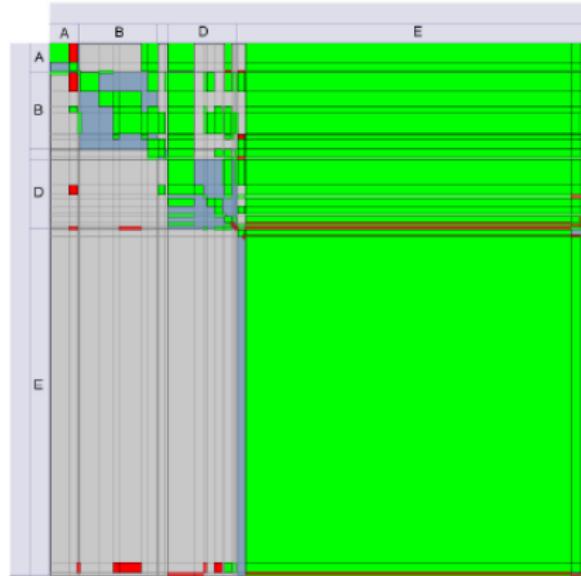

[van Ham, Using Multilevel Call Matrices in Large Software Projects. InfoVis03  
<http://www.win.tue.nl/~fvham/DL/callmatrix.pdf>]

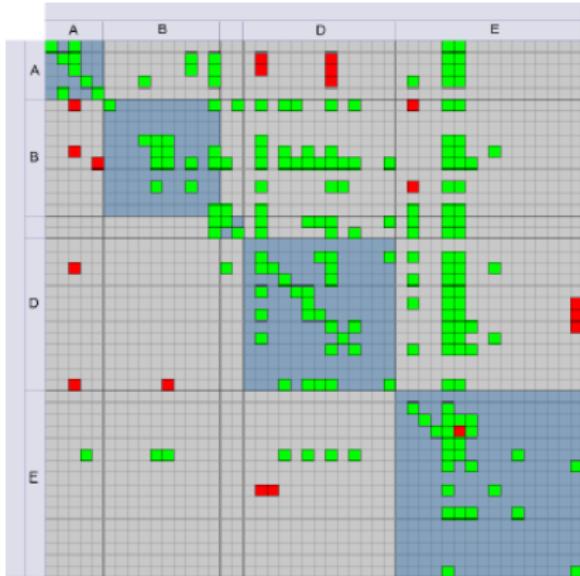

# Matrices

- ▶ uniform, recursive, stable
- ▶ subdivide by

total component count

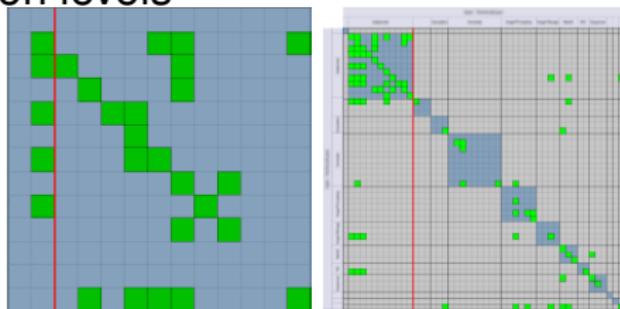

visible subcomponent count

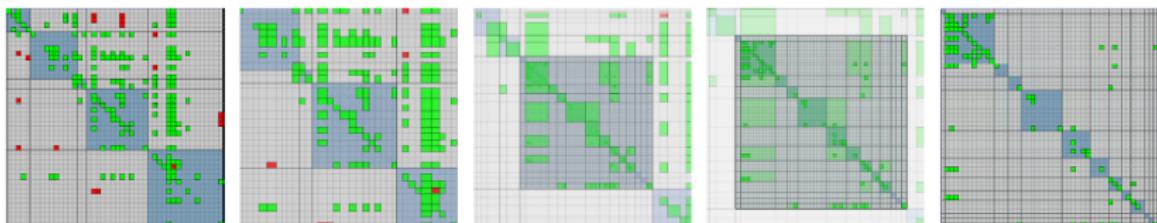

[van Ham, Using Multilevel Call Matrices in Large Software Projects. InfoVis03  
<http://www.win.tue.nl/~fvham/DL/callmatrix.pdf>]

# Zooming

- abstraction levels

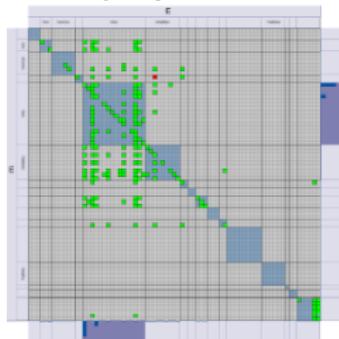

- linear interpolation plus crossfade
- trajectories: will read van Wijk 03 in week 6

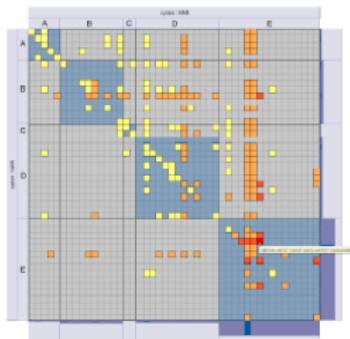

[van Ham, Using Multilevel Call Matrices in Large Software Projects. InfoVis03  
<http://www.win.tue.nl/~fvham/DL/callmatrix.pdf>]

# Additional Encoding

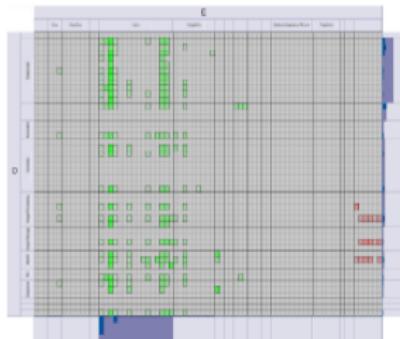

color:  
call allowed  
by spec

color:  
local region  
closest red

transparency:  
call density

- ▶ histograms: size distribution

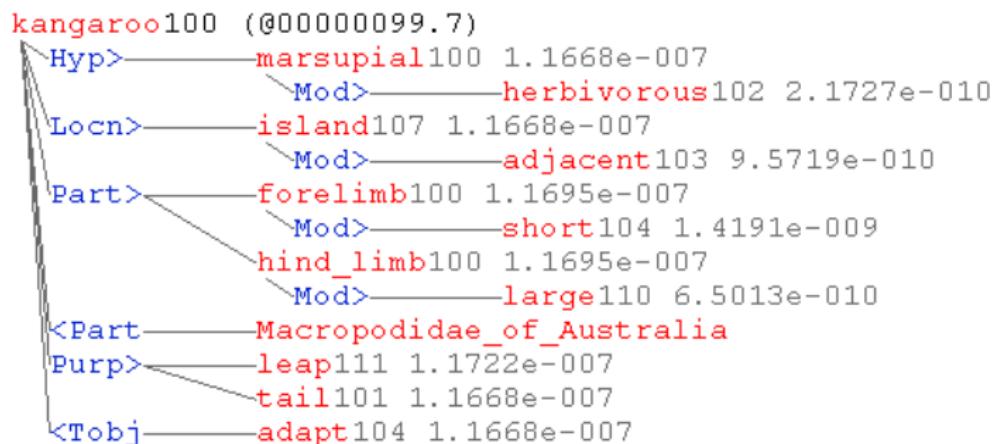

[van Ham, Using Multilevel Call Matrices in Large Software Projects. InfoVis03  
<http://www.win.tue.nl/~fvham/DL/callmatrix.pdf>]

# Tasks Successfully Supported

- ▶ visual categorization
  - ▶ i.e. libraries with mostly incoming calls
- ▶ previous summary shown to be incomplete
- ▶ spotting unwanted calls
- ▶ determining component dependencies

# Linguistic Networks, Munzner

- ▶ data: MindNet query results
- ▶ definition graph
  - ▶ dictionary entry sentence
  - ▶ nodes: word senses
  - ▶ links: relation types

[Munzner, Interactive Visualization of Large Graphs and Networks (PhD thesis),  
Stanford University, 2000, [http://graphics.stanford.edu/papers/munzner\\_thesis](http://graphics.stanford.edu/papers/munzner_thesis)]

# Semantic Network

- ▶ definition graphs used as building blocks
- ▶ unify shared words
- ▶ large network
  - ▶ millions of nodes
  - ▶ grammar checking now, translation future
  - ▶ global structure known: dense
- ▶ probes return local info

# Path Query

- ▶ best N paths between two words
- ▶ words on path itself

kangaroo100—Part→forelimb100—Mod→short104—Join→short<Mod—tail100

- ▶ definition graphs used in computation

```
kangaroo100  (vole101 tapir100 s:  
sharp-tailed_grouse100 scut100 r:  
pitta100 partridge104 lynx100 lo:  
kingfisher100 horned_toad100 haw:  
bobtail101 bobtail100 bobcat100 :  
Scottish_terrier100)
```

# Task: Plausibility Checking

- ▶ paths ordered by computed plausibility
- ▶ researcher hand-checks results
  - ▶ high-ranking paths believable?
  - ▶ believable paths high-ranked?
  - ▶ are stop words all filtered out?

# Top 10 Paths Kangaroo→ Tail

Number of paths: 10

Similarity score: 0.00068368 (< 0.0015 - the words are not similar)

Rank	Path Score	Path Description
1	1.1668e-007	kangaroo100—Purp→tail101 kangaroo100
2	6.4417e-014	kangaroo100—Hyp→marsupial100<—Hyp—Tasmanian_devil100—Part→tail101 kangaroo100 Tasmanian_devil100
3	4.9545e-014	kangaroo103—Hyp→animal109—Part→tail101 kangaroo103 (taper103 tail127 tail111 tag114 switch115 dock111 chipmunk102)
4	4.2954e-014	kangaroo100—Hyp→marsupial100<—Hyp—cuscus100—Part→tail101 kangaroo100 cuscus100
5	1.2972e-014	kangaroo100—Part→forelimb100—Mod→short104—Join→short<Mod—tail100 kangaroo100 (vole101 tapir100 sharp-tailed_grouse100 scut100 ripitta100 partridge104 lynx100 kingfisher100 horned_toad100 hawk100 bobtail101 bobtail100 bobcat100 Scottish_terrier100)
6	5.6234e-015	kangaroo103<—Hyp—wallaroo100—Part→fur112—Join→fur113—Mod→tail113 wallaroo100 (phalanger100 ermine100)

# Goal

- ▶ create a unified view of relationships between paths and definition graphs
  - ▶ shared words are key
  - ▶ thousands of words (not millions)
- ▶ special purpose algorithm debugging tools
  - ▶ not understand structure of English

# Constellation Video

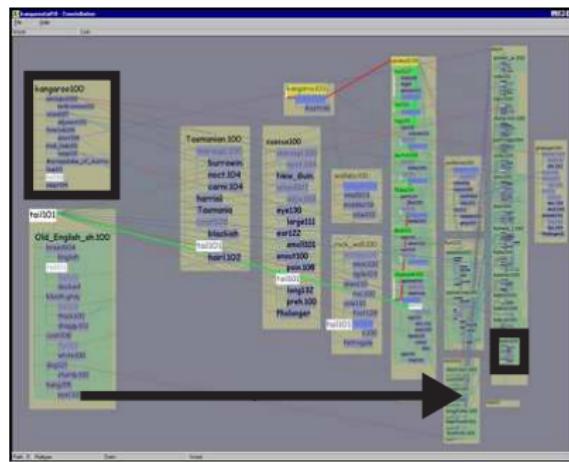

# Traditional Layout

- ▶ avoid crossings
- ▶ reason: avoid false attachments

# Information Visualization Approach

- ▶ spatial position is strongest perceptual cue
  - ▶ encode domain specific attribute
  - ▶ plausibility gradient

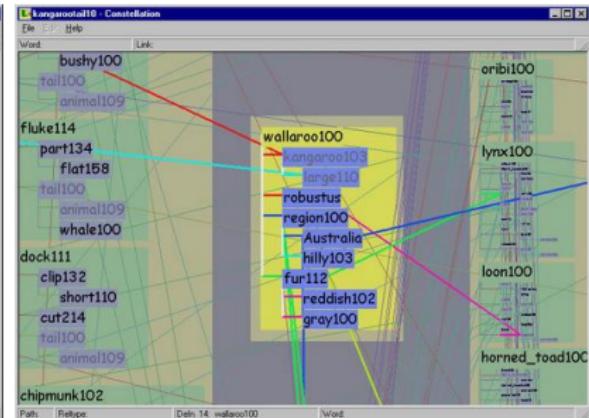

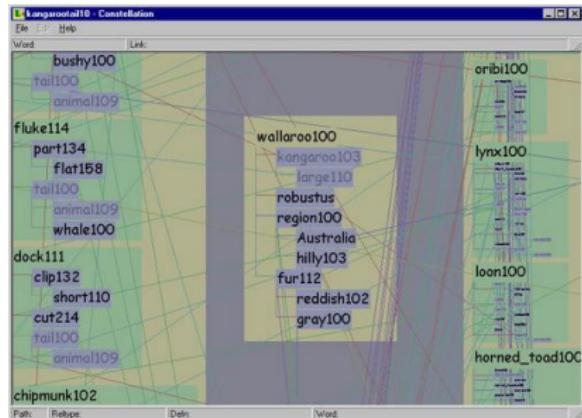

# Constellation Semantic Layout

- ▶ novel layout algorithm
  - ▶ paths as backbone, definition graphs attached
  - ▶ curvilinear grid
  - ▶ iterative design for maximum semantics with reasonable information density
- ▶ allow crossings for long-distance proxy links

# Selective Emphasis

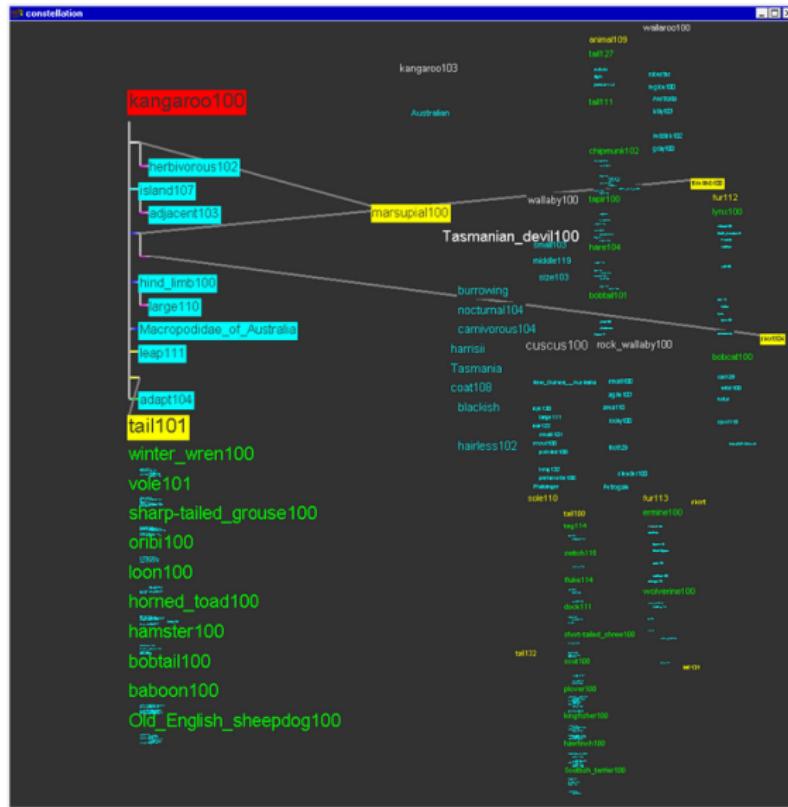

- ▶ highlight sets of boxes and edges
  - ▶ interaction
  - ▶ additional perceptual channels
- ▶ avoid **perception** of false attachments

# Hidden State

- ▶ avoid hidden state
  - ▶ change salience instead of toggle drawing
- ▶ why? closed world assumption
  - ▶ implicit assumption: if not visible, doesn't exist
  - ▶ easy to forget previous actions
    - ▶ draw false negative conclusions

# Single vs. Multiple Word Instances

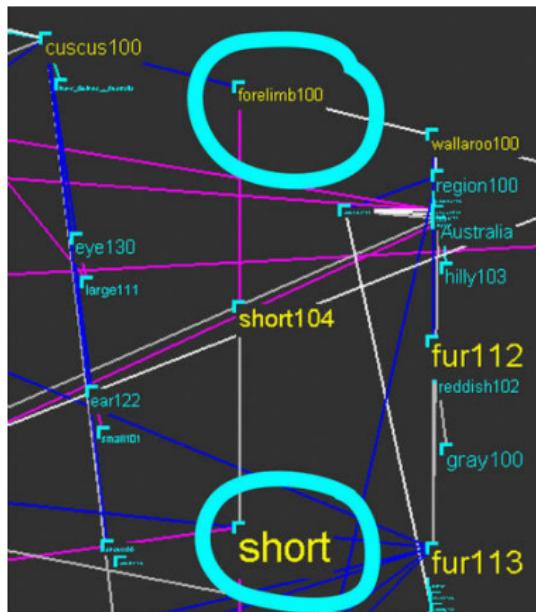

# Information Density

- ▶ early prototype: poor

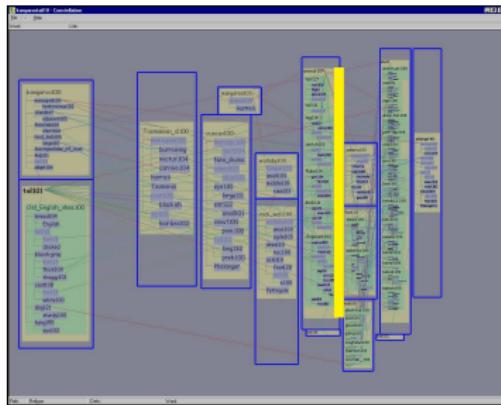

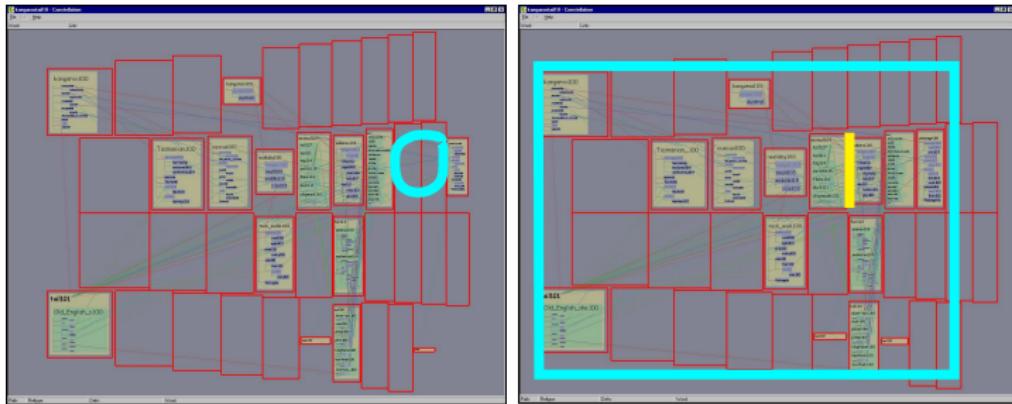

# Information Density

- ▶ design tradeoff with visual salience

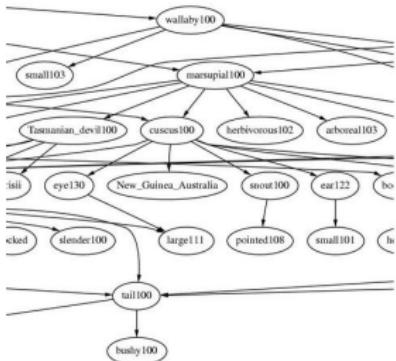

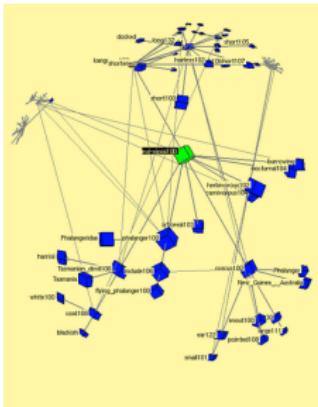

# Information Density

- ▶ grid adjustment

# Task-oriented design

► task-specific methods
