Visualization (vis) defined & motivated

Computer-based visualization systems provide visual representations of datasets designed to help people carry out tasks more effectively.
 Visualization is suitable when there is a need to augment human capabilities rather than replace people with computational decision-making methods.

Nested model: Four levels of visualization design

- domain situation
 - who are the target users?
- abstraction
 - translate from specifics of domain to vocabulary of vis
 - what is shown? **data** abstraction
 - why is the user looking at it? **task** abstraction
- idiom
 - how is it shown?
 - **visual encoding** idiom: how to draw
 - **interaction** idiom: how to manipulate
- algorithm
 - efficient computation

[A Nested Model of Visualization Design and Validation. Review. IEEE TVCG 15(6):921-928, 2009. (Proc. InfoVis 2009).]
 [A Nested Model of Visualization Design and Validation. Review. IEEE TVCG 15(6):921-928, 2009. (Proc. InfoVis 2009).]
 [A Nested Model of Visualization Design and Validation. Review. IEEE TVCG 15(6):921-928, 2009. (Proc. InfoVis 2009).]

Why is validation difficult?

- different ways to get it wrong at each level

The diagram shows four levels of the nested model with associated errors:

- Domain situation:** You misunderstood their needs
- Data/task abstraction:** You're showing them the wrong thing
- Visual encoding/interaction idiom:** The way you show it doesn't work
- Algorithm:** Your code is too slow

[A Nested Model of Visualization Design and Validation. Munzner. IEEE TVCG 15(6):921-928, 2009. (Proc. InfoVis 2009).]

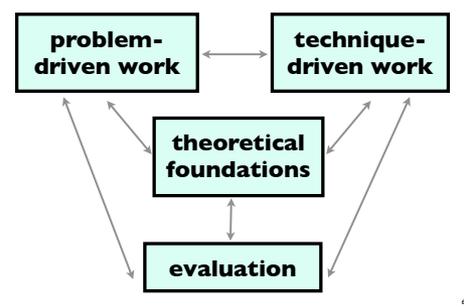

Evaluation: broadly interpreted

- methods from many fields, qualitative & quantitative
 - controlled experiments in lab, field studies of deployed systems

The diagram shows a central box for 'evaluation' with arrows pointing to it from various fields: anthropology/ethnography, design, computer science, HCI/psychology, and anthropology/ethnography. Each field has associated activities like 'Observe target users using existing tools', 'Data/task abstraction', 'Visual encoding/interaction idiom', 'Algorithm', and 'Measure adoption'.

Tamara Munzner, UBC CS, InfoVis Research

Problem-driven work

- design studies
 - in collaboration with target users
 - real data, real tasks
 - intensive requirements analysis
 - iterative refinement
 - deploy tools/systems
 - typical evaluation: field studies
- my strategy: opportunistic collaboration
 - many domains
 - both industrial and academic partners

Design studies

- log analysis
 - Google: web users
 - AT&T: web hosting server farms
 - Mobify: e-commerce clickstreams
 - EnerNOC: building energy management
 - Sensible Building Science: building usage patterns
- genomics
 - Harvard Med School: comparative functional genomics
 - Harvard/MIT: synteny relationships between species
 - BC Cancer: sequence variants in gene context
 - UBC Biodiversity: comparing gene/species phylogenetic trees
 - UBC/Agilent: protein-protein interaction networks
 - UBC/BCDC: genomic epidemiology

Design studies

- many other domains
 - SFU/DFO: fisheries
 - BMW: in-car networks
 - Associated Press: large document collections for journalists

Technique-driven work

- scalable algorithms & systems
 - typical evaluation: computational benchmarks
- new visual encoding & interaction techniques
 - typical evaluation: controlled experiments on human subjects
 - typical evaluation: qualitative assessment
- areas
 - graph drawing, dimensionality reduction
 - human-in-the-loop curation of machine learning results
 - Tableau: VizCommitter recommendation systems
 - TimeLineCurator

Evaluation

- quantitative & qualitative & mixed methods
- field studies
 - pre-design & post-deployment
- lab studies
 - in person & crowdsourced
- data studies
 - few people (experts), many datasets

Evaluation experiments: Dim. reduction

The block features portraits of Melanie Tory and Michael Sedlmair, along with several data visualizations. One visualization is titled 'Points vs landscapes for dimensionally reduced data' and another is 'Guidance on DR & scatterplot choices'. A 'Taxonomy of cluster separation factors' diagram is also present.

Evaluation in the field: Dim. reduction

The block includes a 'DR in the Wild' diagram showing various data visualizations and their associated evaluation methods. Below the diagram are portraits of Matt Brehmer, Michael Sedlmair, Melanie Tory, and Stephen Ingram.

Theoretical foundations

The block contains a 'Nested Model' diagram, a 'Papers Process & Pitfalls' diagram, and a 'Design Study Methodology' diagram. Below these are portraits of Michael Sedlmair, Miriah Meyer, and Matt Brehmer.

More info

- book (free through UBC library)
 - <http://www.cs.ubc.ca/~tmm/vadbook>
- papers, videos, software, talks, courses
 - <http://www.cs.ubc.ca/group/infovis>
 - <http://www.cs.ubc.ca/~tmm>

The block also features a 'Visualization Analysis & Design' diagram showing a complex network of nodes and edges.

Grad course: CPSC 547

- teaching now
- final presentations Thu Dec 10
 - 3-7pm
 - you're invited!
 - <https://www.cs.ubc.ca/~tmm/courses/547-20/projects.html>
 - <https://bit.ly/36ufd5T> (shortened) zoom URL

547 Projects

- Geographic-Financial.
- UCoD - Simplifying Supply Chain Structures in the Browser.
- Country vs. Country: Food & Allergy Edition.
- Visualizing Linguistic Diversity in Vancouver.
- Visualizing Compiler Passes with FirstPass.
- EnergyFlowVis: Visualizing Energy Use Flows for UBC Campus.
- Disease Outbreak Radar: A Tool for Epidemiologists.
- Bewilder: Handling Web Resource Complexity in Online Learning/Research.
- Visualizing Mobility and COVID-19.
- Android App Similarity Visualization.
- Fires: Visualizing the Current State and Impact of Wildfires Across Canada.
- Smart Intersection Vis.
- AMR-TV: Antimicrobial Resistance Transmission Visualizer.
- Visualizing Simulation of Evolutionary Trend of Language in Color Naming.
- Did We Save Our Tigers?
- README: A Literature Survey Assistant.

17

Ugrad course: CSPC 436V

- new, second offering is Jan 2022
 - first offering
<https://www.cs.ubc.ca/~tmm/courses/436V-20/>
 - substantial changes in the works for online version
- 4th year majors course
 - theory: visualization foundations
 - tooling: D3.js
 - prereq: CPSC 310
