

# Visualization Analysis & Design, In More Depth

**Tamara Munzner**  
 Department of Computer Science  
 University of British Columbia  
 Department of Industry, Innovation and Science, Economic and Analytical Services  
 June 23 2017, Canberra Australia

[www.cs.ubc.ca/~tmm/talks.html#vad17can-aft](http://www.cs.ubc.ca/~tmm/talks.html#vad17can-aft)

@tamaramunzner

## Outline

- Session 1 10-11:30am  
 Data Visualization Pitfalls to Avoid
  - Introduction
  - Color
  - Space: 2D vs 3D
- Session 2 12:30-3pm  
 Visualization Analysis & Design, In More Depth
  - Marks and Channels, Perception
  - Arrange Tables
  - Arrange Spatial Data
  - Arrange Networks
  - Manipulate: Change, Select, Navigate
  - Facet: Juxtapose, Partition, Superimpose
  - Reduce: Filter, Aggregate

<http://www.cs.ubc.ca/~tmm/talks.html#vad17can-aft>

@tamaramunzner

### What? Why? How?

#### Data Types

- Items → Attributes → Links → Positions → Grids

#### Data and Dataset Types

- Tables: Items, Attributes
- Networks & Trees: Items (nodes), Links, Attributes
- Fields: Grids, Positions, Attributes
- Geometry: Items, Positions
- Clusters, Sets, Lists: Items

#### Dataset Types

- Tables: Attribute (columns), Call containing value
- Networks: Link, Node, Weight
- Fields (Continuous): Grid of positions, Call, Value
- Multidimensional Table: Value
- Trees: Node, Link, Weight
- Geometry (Spatial): Position

#### Attributes

- Attribute Types: Categorical, Ordered, Quantitative
- Ordering Direction: Sequential, Diverging, Cyclic
- Dataset Availability: Static, Dynamic

### Why? How?

#### Actions

- Analyze: Consume (Discover, Present, Enjoy), Produce (Annotate, Record, Derive), Search (Target known, Target unknown), Query (Identify, Compare, Summarize)

#### Targets

- All Data: Trends, Outliers, Features
- Attributes: One, Many, Distribution, Dependency, Correlation, Similarity, Extremes
- Network Data: Topology, Paths
- Spatial Data: Shape

• {action, target} pairs

- discover distribution
- compare trends
- locate outliers
- browse topology

### How?

#### Encode

- Arrange: Express, Separate, Order, Align, Use
- Map: from categorical and ordered attributes → Color (Hue, Saturation, Luminance) → Size, Angle, Curvature, ... → Shape → Motion (Direction, Rate, Frequency, ...)

#### Manipulate

- Change, Select, Navigate

#### Facet

- Juxtapose, Partition, Superimpose, Embed

#### Reduce

- Filter, Aggregate

### Channels: Rankings

#### Magnitude Channels: Ordered Attributes

- Position on common scale
- Position on unaligned scale
- Length (1D size)
- Tilt/angle
- Area (2D size)
- Depth (3D position)
- Color luminance
- Color saturation
- Curvature
- Volume (3D size)

#### Identity Channels: Categorical Attributes

- Spatial region
- Color hue
- Motion
- Shape

• expressiveness principle  
 - match channel and data characteristics

• effectiveness principle  
 - encode most important attributes with highest ranked channels

### Channels: Expressiveness types and effectiveness rankings

#### Magnitude Channels: Ordered Attributes

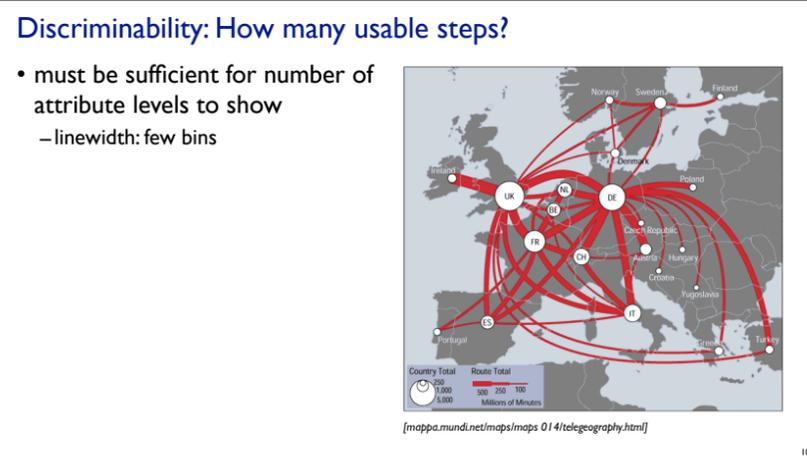

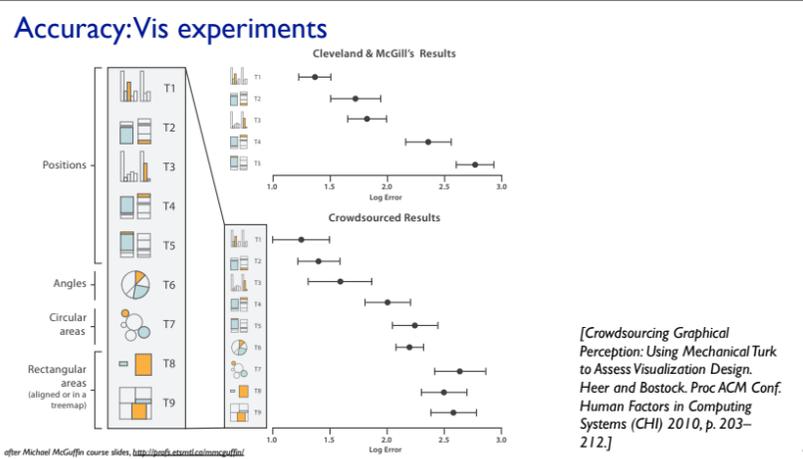

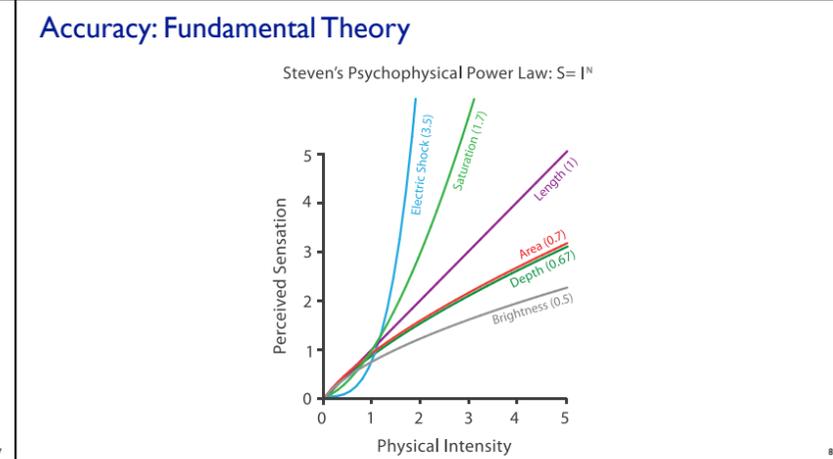

- Position on common scale
- Position on unaligned scale
- Length (1D size)
- Tilt/angle
- Area (2D size)
- Depth (3D position)
- Color luminance
- Color saturation
- Curvature
- Volume (3D size)

#### Identity Channels: Categorical Attributes

- Spatial region
- Color hue
- Motion
- Shape

• expressiveness principle  
 - match channel and data characteristics

• effectiveness principle  
 - encode most important attributes with highest ranked channels  
 - spatial position ranks high for both

### Separability vs. Integrality

Position + Hue (Color)

Fully separable

2 groups each

Size + Hue (Color)

Some interference

2 groups each

Width + Height

Some/significant interference

3 groups total: integral area

Red + Green

Major interference

4 groups total: integral hue

### Popout

• find the red dot  
 - how long does it take?

• parallel processing on many individual channels  
 - speed independent of distractor count  
 - speed depends on channel and amount of difference from distractors

• serial search for (almost all) combinations  
 - speed depends on number of distractors

### Popout

• many channels: tilt, size, shape, proximity, shadow direction, ...  
 • but not all! parallel line pairs do not pop out from tilted pairs

### Grouping

• containment  
 • connection

• proximity  
 - same spatial region

• similarity  
 - same values as other categorical channels

Marks as Links

- Containment
- Connection

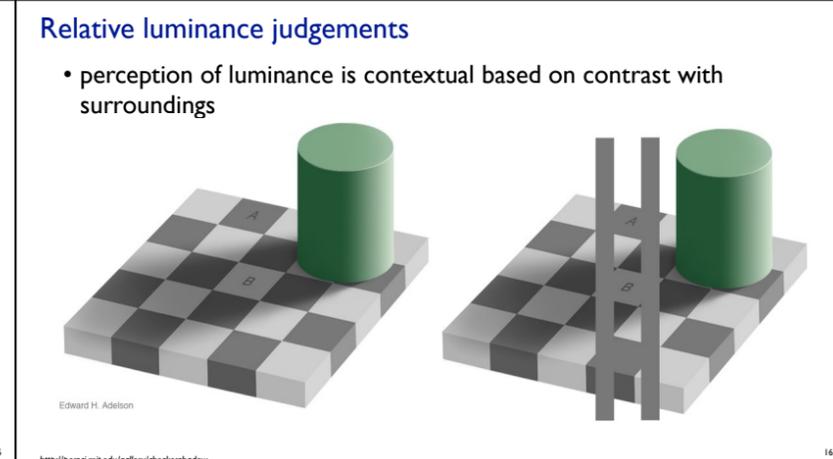

Identity Channels: Categorical Attributes

- Spatial region
- Color hue
- Motion
- Shape

### Relative vs. absolute judgements

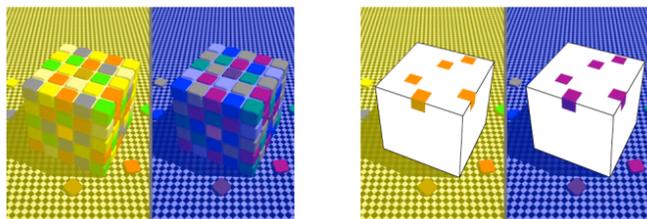

• perceptual system mostly operates with relative judgements, not absolute  
 - that's why accuracy increases with common frame/scale and alignment  
 - Weber's Law: ratio of increment to background is constant

- filled rectangles differ in length by 1:9, difficult judgement
- white rectangles differ in length by 1:2, easy judgement

## Relative color judgements

- color constancy across broad range of illumination conditions

<http://www.purveslab.net/see4yourself/>

@tamaramunzner

20

## Encode tables: Arrange space

Encode

- Arrange
  - Express
  - Order
- Separate
- Align

21

## Keys and values

- key
  - independent attribute
  - used as unique index to look up items
  - simple tables: 1 key
  - multidimensional tables: multiple keys
- value
  - dependent attribute, value of cell
- classify arrangements by key count
  - 0, 1, 2, many...

→ Tables

Attributes (columns)

Items (rows)

Cell containing value

→ Multidimensional Table

Key 1

Key 2

Value in cell

Attributes

Express Values → 1 Key List → 2 Keys Matrix → 3 Keys Volume → Many Keys Recursive Subdivision

22

## 0 Keys

Express Values → 1 Key List → 2 Keys Matrix → 3 Keys Volume → Many Keys Recursive Subdivision

## Idiom: scatterplot

- express values
  - quantitative attributes
- no keys, only values
  - data
    - 2 quant attribs
  - mark: points
    - horiz + vert position
  - tasks
    - find trends, outliers, distribution, correlation, clusters
  - scalability
    - hundreds of items

Express Values

price

carat

price

carat

[A layered grammar of graphics. Wickham. Journ. Computational and Graphical Statistics 19:1 (2010), 3–28.]

24

## Some keys

Express Values → 1 Key List → 2 Keys Matrix → 3 Keys Volume → Many Keys Recursive Subdivision

25

## Some keys: Categorical regions

Separate → Order → Align

- regions: contiguous bounded areas distinct from each other
  - using space to separate (proximity)
  - following expressiveness principle for categorical attributes
- use ordered attribute to order and align regions

Express Values → 1 Key List → 2 Keys Matrix → 3 Keys Volume → Many Keys Recursive Subdivision

26

## Idiom: bar chart

- one key, one value
  - data
    - 1 categ attrib, 1 quant attrib
  - mark: lines
  - channels
    - length to express quant value
    - spatial regions: one per mark
      - separated horizontally, aligned vertically
      - ordered by quant attrib
        - » by label (alphabetical), by length attrib (data-driven)
  - task
    - compare, lookup values
  - scalability
    - dozens to hundreds of levels for key attrib

Avg Weight (lbs)

Animal Type

Avg Weight (lbs)

Animal Type

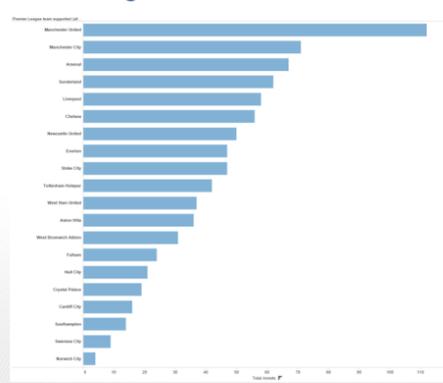

27

## Separated and Aligned but not Ordered

LIMITATION: Hard to know rank. What's the 4th most? The 7th?

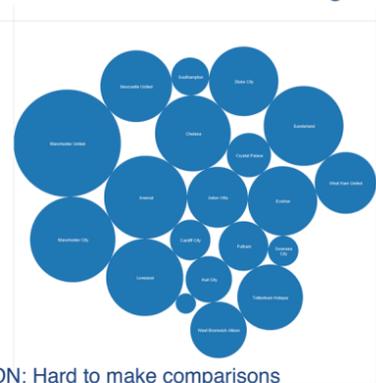

[Slide courtesy of Ben Jones]

## Separated, Aligned and Ordered

[Slide courtesy of Ben Jones]

## Separated but not Ordered or Aligned

[Slide courtesy of Ben Jones]

## Idiom: line chart

- one key, one value
  - data
    - 2 quant attribs
  - mark: points
    - line connection marks between them
  - channels
    - aligned lengths to express quant value
    - separated and ordered by key attrib into horizontal regions
  - task
    - find trend
      - connection marks emphasize ordering of items along key axis by explicitly showing relationship between one item and the next

Avg Weight (lbs)

Year

## Idiom: line chart / dot plot

- one key, one value
  - data
    - 2 quant attribs
  - mark: points
    - line connection marks between them
  - channels
    - aligned lengths to express quant value
    - separated and ordered by key attrib into horizontal regions
  - task
    - find trend
      - connection marks emphasize ordering of items along key axis by explicitly showing relationship between one item and the next
  - scalability
    - hundreds of key levels, hundreds of value levels

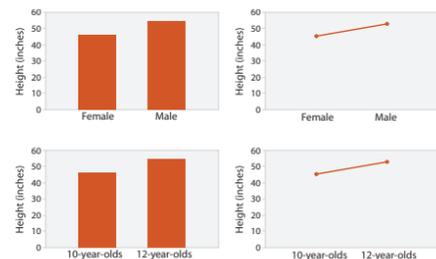

Avg Weight (lbs)

Year

31

## Choosing bar vs line charts

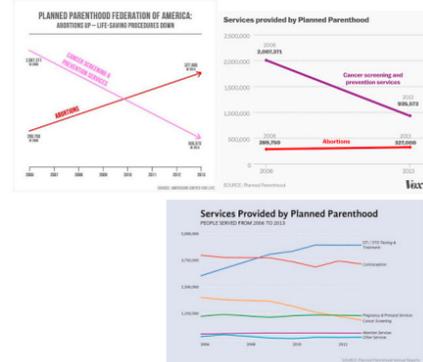

- depends on type of key attrib
  - bar charts if categorical
  - line charts if ordered
- do not use line charts for categorical key attribs
  - violates expressiveness principle
    - implication of trend so strong that it overrides semantics!
      - “The more male a person is, the taller he/she is”

after [Bars and Lines: A Study of Graphic Communication. Zacks and Tversky. Memory and Cognition 27:6 (1999), 1073–1079.]

## Chart axes

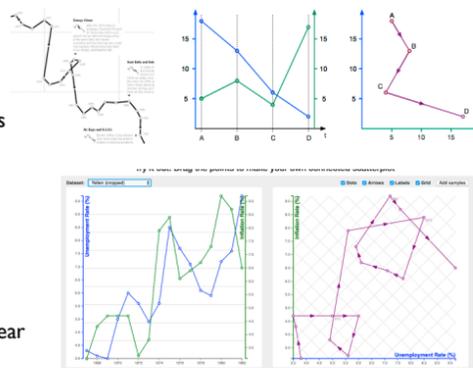

- labelled axis is critical
- avoid cropping y-axis
  - include 0 at bottom left
  - or slope misleads
- dual axes controversial
  - acceptable if commensurate
  - beware, very easy to mislead!

<http://www.thefunctionalart.com/2015/11/01/if-you-see-bullshit-say-bullshit.html>

## Idiom: connected scatterplots

- scatterplot with line connection marks
  - popular in journalism
  - horiz + vert axes: value attribs
  - line connection marks: temporal order
    - horiz: time
    - vert: two value attribs
- empirical study
  - engaging, but correlation unclear

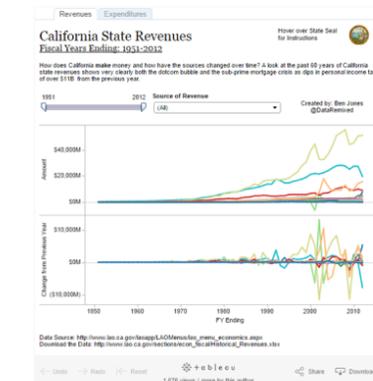

[The Connected Scatterplot for Presenting Paired Time Series. Haraz, Kosara and Franconi. IEEE TVCG 22(9):2174-86, 2016.]

[http://steveharoz.com/research/connected\\_scatterplot/](http://steveharoz.com/research/connected_scatterplot/)

## Idiom: Indexed line charts

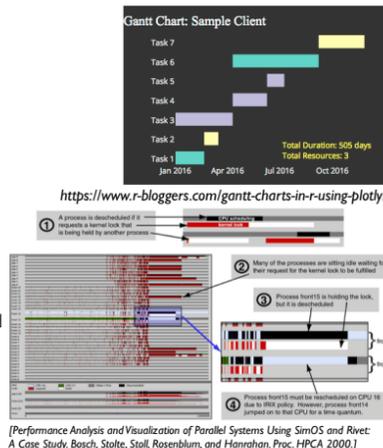

- data: 2 quant attires
  - 1 key + 1 value
- derived data: new quant value attrib
  - index
  - plot instead of original value
- task: show change over time
  - principle: normalized, not absolute
- scalability
  - same as standard line chart

<https://public.tableau.com/profile/ben.jones#vizhome/CAStateRevenues/Revenues>

## Idiom: Gantt charts

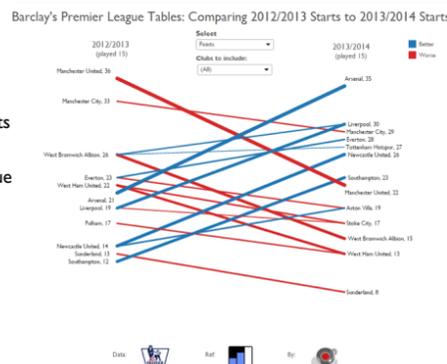

- one key, two (related) values
  - data
    - 1 categ attrib, 2 quant attribs
  - mark: line
    - length: duration
  - channels
    - horiz position: start time (+end from duration)
  - task
    - emphasize temporal overlaps, start/end dependencies between items
  - scalability
    - dozens of key levels
    - hundreds of value levels

[Performance Analysis and Visualization of Parallel Systems Using SimOS and Rivet. A Case Study. Bosch, Stolte, Stall, Rosenblum, and Hamrahan. Proc. HPCA 2000.]

## Idiom: Slopegraphs

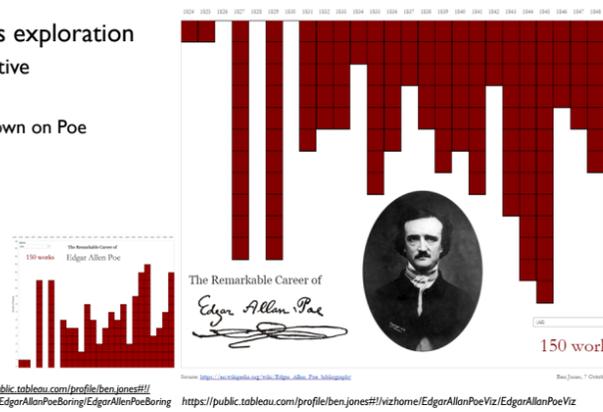

- two values
  - data
    - 2 quant value attribs
  - mark: point + line
    - line connecting mark between pts
  - channels
    - 2 vertical pos: express attrib value
  - task
    - emphasize changes in rank/value
  - scalability
    - hundreds of value levels

<https://public.tableau.com/profile/ben.jones#vizhome/Slopegraphs/Slopegraphs>

## Breaking conventions

- presentation vs exploration
  - engaging/evocative
  - inverted y axis
    - blood drips down on Poe

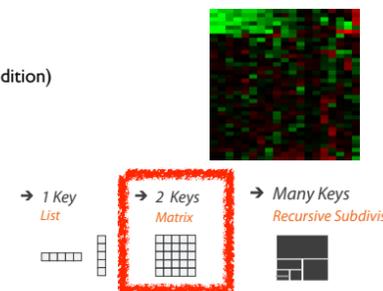

<https://public.tableau.com/profile/ben.jones#vizhome/EdgarAllanPoeBoring/EdgarAllanPoeBoring>

## 2 Keys

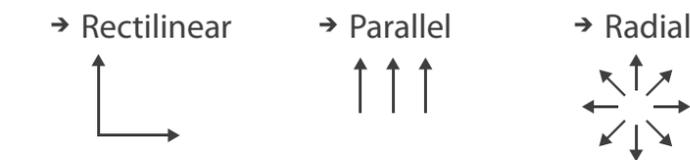

## Idiom: heatmap

- two keys, one value
  - data
    - 2 categ attribs (gene, experimental condition)
    - 1 quant attrib (expression levels)
  - marks: area
    - separate and align in 2D matrix
    - indexed by 2 categorical attributes
  - channels
    - color by quant attrib
    - (ordered diverging colormap)
  - task
    - find clusters, outliers
  - scalability
    - 1M items, 100s of categ levels, ~10 quant attrib levels

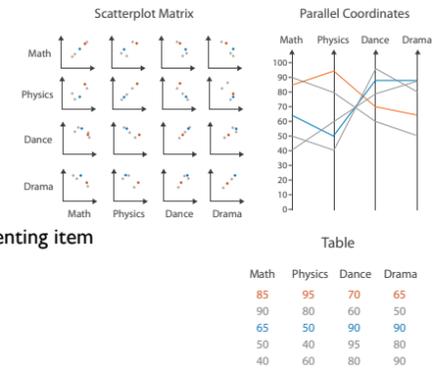

→ 1 Key List → 2 Keys Matrix → Many Keys Recursive Subdivision

## Axis Orientation

## Idioms: scatterplot matrix, parallel coordinates

- scatterplot matrix (SPLOM)
  - rectilinear axes, point mark
  - all possible pairs of axes
  - scalability
    - one dozen attribs
    - dozens to hundreds of items
- parallel coordinates
  - parallel axes, jagged line representing item
  - rectilinear axes, item as point
    - axis ordering is major challenge
  - scalability
    - dozens of attribs
    - hundreds of items

after [Visualization Course Figures. McGuffin, 2014. <http://www.michaelmcguffin.com/courses/viz/>]

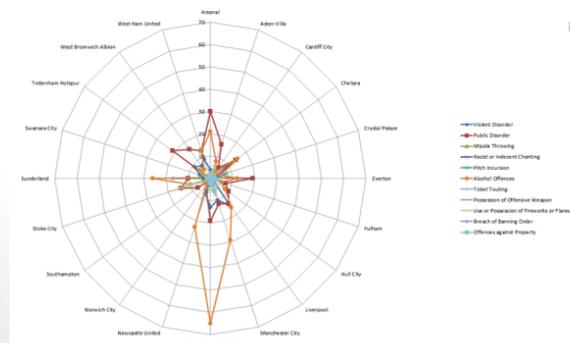

## Idioms: radial bar chart, star plot

- radial bar chart
  - radial axes meet at central ring, line mark
- star plot
  - radial axes, meet at central point, line mark
- bar chart
  - rectilinear axes, aligned vertically
- accuracy
  - length unaligned with radial
    - less accurate than aligned with rectilinear

[Vizmon: Facilitating Risk Assessment and Decision Making In Fisheries Management. Booshehrian, Möller, Peterman, and Munzner. Technical Report TR 2011-04, Simon Fraser University, School of Computing Science, 2011.]

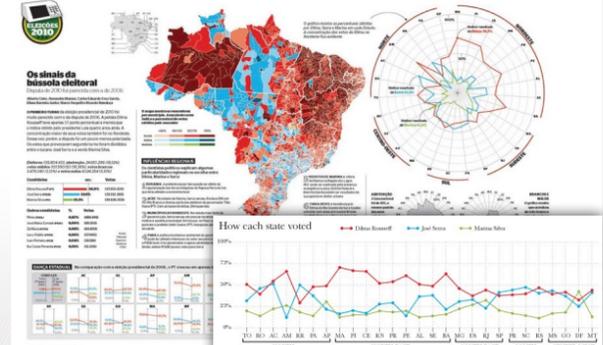

## Radial Orientation: Radar Plots

LIMITATION: Not good when categories aren't cyclic

[Slide courtesy of Ben Jones]

## “Radar graphs: Avoid them (99.9% of the time)”

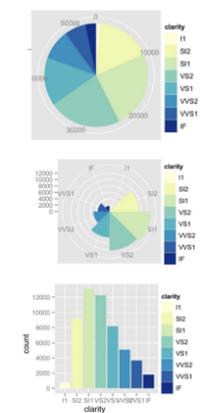

<http://www.thefunctionalart.com/2012/11/radar-graphs-avoid-them-999-of-time.html>

[Slide courtesy of Ben Jones]

## Idioms: pie chart, polar area chart

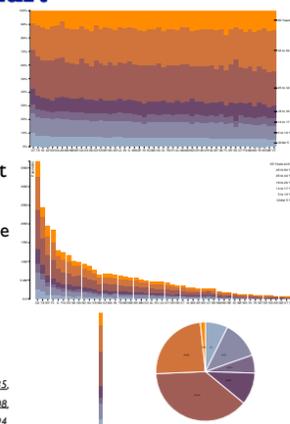

- pie chart
  - area marks with angle channel
  - accuracy: angle/area less accurate than line length
    - arclength also less accurate than line length
- polar area chart
  - area marks with length channel
  - more direct analog to bar charts
- data
  - 1 categ key attrib, 1 quant value attrib
- task
  - part-to-whole judgements

[A layered grammar of graphics. Wickham. Journ. Computational and Graphical Statistics 19:1 (2010), 3–28.]

## Idioms: normalized stacked bar chart

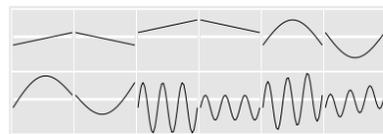

- task
  - part-to-whole judgements
- normalized stacked bar chart
  - stacked bar chart, normalized to full vert height
  - single stacked bar equivalent to full pie
    - high information density: requires narrow rectangle
- pie chart
  - information density: requires large circle

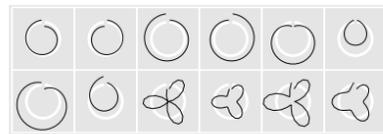

<http://bl.ocks.org/imbostock/3887235>  
<http://bl.ocks.org/imbostock/3886208>  
<http://bl.ocks.org/imbostock/3886394>

## Idiom: **glyphmaps**

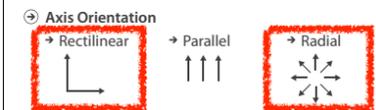

- rectilinear good for linear vs nonlinear trends

- radial good for cyclic patterns

[Glyph-maps for Visually Exploring Temporal Patterns in Climate Data and Models. Wickham, Hofmann, Wickham, and Cook. *Environmetrics* 23:5 (2012), 382-393.]

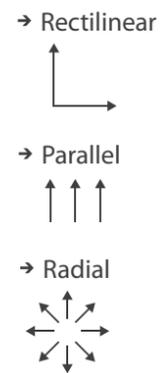

## Orientation limitations

- rectilinear: scalability wrt #axes
  - 2 axes best
  - 3 problematic
    - more in afternoon
  - 4+ impossible
- parallel: unfamiliarity, training time
- radial: perceptual limits
  - angles lower precision than lengths
  - asymmetry between angle and length
    - can be exploited!

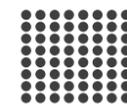

[Uncovering Strengths and Weaknesses of Radial Visualizations - an Empirical Approach. Diehl, Beck and Burch. *IEEE TVCG (Proc. InfoVis)* 16(6):935-942, 2010.]

### ➔ Axis Orientation

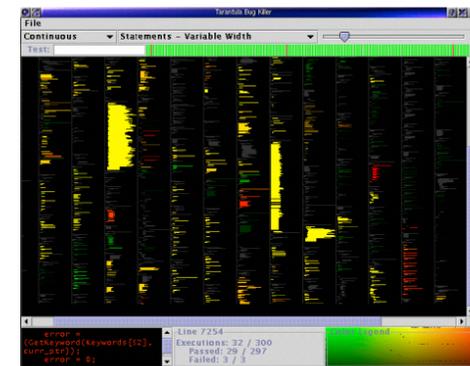

### ➔ Layout Density

#### ➔ Dense

## dense software overviews

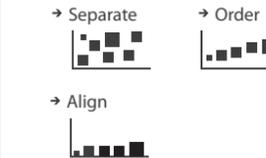

[Visualization of test information to assist fault localization. Jones, Harrold, Staska. *Proc. ICSE* 2002, p. 467-477.]

## Arrange tables

### ➔ Express Values

### ➔ Separate, Order, Align Regions

### ➔ Axis Orientation

### ➔ Layout Density

## Further reading

- Visualization Analysis and Design. Munzner. AK Peters Visualization Series, CRC Press, 2014.
  - Chap 7: Arrange Tables
- Visualizing Data. Cleveland. Hobart Press, 1993.
- A Brief History of Data Visualization. Friendly. 2008.
  - <http://www.datavis.ca/milestones>

## Outline

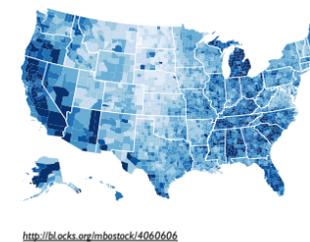

- **Session 1 10-11:30am**  
Data Visualization Pitfalls to Avoid
  - Introduction
  - Color
  - Space: 2D vs 3D
- **Session 2 12:30-3pm**  
Visualization Analysis & Design, In More Depth
  - Marks and Channels, Perception
  - Arrange Tables
  - Arrange Spatial Data
  - Arrange Networks
  - Manipulate: Change, Select, Navigate
  - Facet: Juxtapose, Partition, Superimpose
  - Reduce: Filter, Aggregate

<http://www.cs.ubc.ca/~tmm/talks.html#vad17can-aft>

@tamaramunzner

## Idiom: **choropleth map**

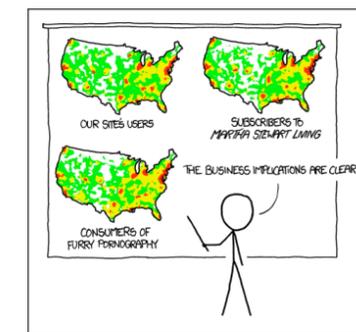

- use given spatial data
  - when central task is understanding spatial relationships
- data
  - geographic geometry
  - table with 1 quant attribute per region
- encoding
  - use given geometry for area mark boundaries
  - sequential segmented colormap [more later]

<http://bllocks.org/mbostock/4060606>

## Beware: Population maps trickiness!

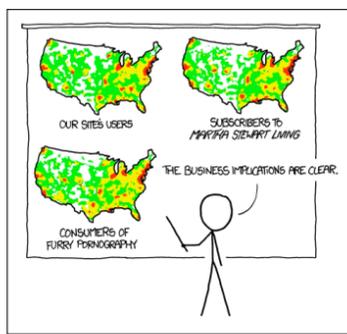

[ <https://xkcd.com/1138> ]

PET PEEVE #208: GEOGRAPHIC PROFILE MAPS WHICH ARE BASICALLY JUST POPULATION MAPS

## Population maps trickiness

- beware!
- absolute vs relative again
  - population density vs per capita
- investigate with Ben Jones Tableau Public demo
  - [http://public.tableau.com/profile/ben\\_jones#!/vizhome/PopVsFin/PopVsFin](http://public.tableau.com/profile/ben_jones#!/vizhome/PopVsFin/PopVsFin)  
Are Maps of Financial Variables just Population Maps?
  - yes, unless you look at per capita (relative) numbers

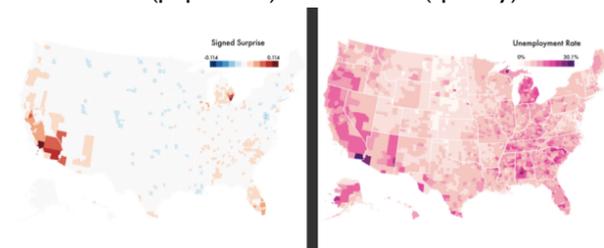

PET PEEVE #208: GEOGRAPHIC PROFILE MAPS WHICH ARE BASICALLY JUST POPULATION MAPS

[ <https://xkcd.com/1138> ]

## Idiom: **Bayesian surprise maps**

- use models of expectations to highlight surprising values
- confounds (population) and variance (sparsity)

<https://medium.com/@uwdata/surprise-maps-showing-the-unexpected-e92b67398865>

## Outline

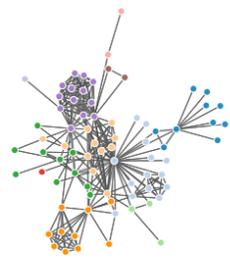

- **Session 1 10-11:30am**  
Data Visualization Pitfalls to Avoid
  - Introduction
  - Color
  - Space: 2D vs 3D
- **Session 2 12:30-3pm**  
Visualization Analysis & Design, In More Depth
  - Marks and Channels, Perception
  - Arrange Tables
  - Arrange Spatial Data
  - Arrange Networks
  - Manipulate: Change, Select, Navigate
  - Facet: Juxtapose, Partition, Superimpose
  - Reduce: Filter, Aggregate

<http://www.cs.ubc.ca/~tmm/talks.html#vad17can-aft>

@tamaramunzner

## Idiom: **force-directed placement**

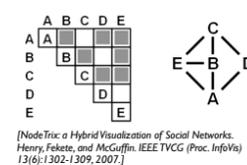

- visual encoding
  - link connection marks, node point marks
- considerations
  - spatial position: no meaning directly encoded
    - left free to minimize crossings
  - proximity semantics?
    - sometimes meaningful
    - sometimes arbitrary, artifact of layout algorithm
    - tension with length
      - long edges more visually salient than short
- tasks
  - explore topology; locate paths, clusters
- scalability
  - node/edge density  $E < 4N$

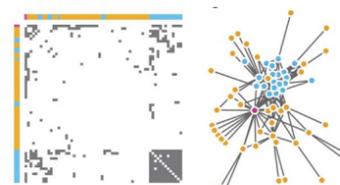

<http://mbostock.github.com/d3/ex/force.html>

## Idiom: **adjacency matrix view**

- data: network
  - transform into same data/encoding as heatmap
- derived data: table from network
  - 1 quant attrib
    - weighted edge between nodes
  - 2 categ attribs: node list x 2
- visual encoding
  - cell shows presence/absence of edge
- scalability
  - 1K nodes, 1M edges

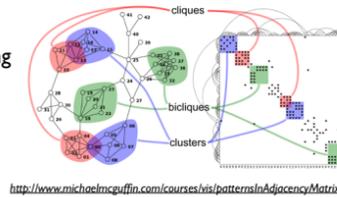

[NodeTrix: a Hybrid Visualization of Social Networks. Henry, Fekete, and McGuffin. *IEEE TVCG (Proc. InfoVis)* 13(6):1302-1309, 2007.]

[Points of view: Networks. Gehlenborg and Wang. *Nature Methods* 9:115.]

## Connection vs. adjacency comparison

- adjacency matrix strengths
  - predictability, scalability, supports reordering
  - some topology tasks trainable
- node-link diagram strengths
  - topology understanding, path tracing
  - intuitive, no training needed
- empirical study
  - node-link best for small networks
  - matrix best for large networks
    - if tasks don't involve topological structure!

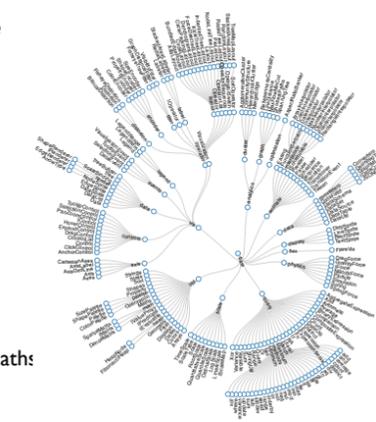

<http://www.michaelmcguffin.com/courses/vis/patternsInAdjacencyMatrix.png>

[On the readability of graphs using node-link and matrix-based representations: a controlled experiment and statistical analysis. Ghoniem, Fekete, and Castagliola. *Information Visualization* 4:2 (2005), 114-135.]

## Idiom: **radial node-link tree**

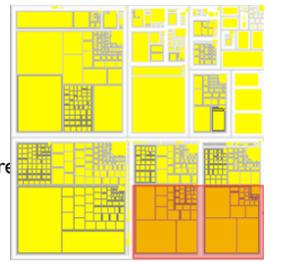

- data
  - tree
- encoding
  - link connection marks
  - point node marks
  - radial axis orientation
    - angular proximity: siblings
    - distance from center: depth in tree
- tasks
  - understanding topology, following paths
- scalability
  - 1K - 10K nodes

<http://mbostock.github.com/d3/ex/tree.html>

# Idiom: treemap

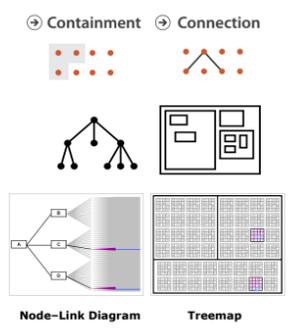

- data
  - tree
  - 1 quant attrib at leaf nodes
- encoding
  - area containment marks for hierarchical structure
  - rectilinear orientation
  - size encodes quant attrib
- tasks
  - query attribute at leaf nodes
- scalability
  - IM leaf nodes

[http://tulip.labri.fr/Documentation/3\\_7/userhandbook/html/ch06.html](http://tulip.labri.fr/Documentation/3_7/userhandbook/html/ch06.html)

# Link marks: Connection and containment

- marks as links (vs. nodes)
  - common case in network drawing
  - 1D case: connection
    - ex: all node-link diagrams
    - emphasizes topology, path tracing
    - networks and trees
  - 2D case: containment
    - ex: all treemap variants
    - emphasizes attribute values at leaves (size coding)
    - only trees

[Elastic Hierarchies: Combining Treemaps and Node-Link Diagrams. Dong, McGuffin, and Chignell. Proc. InfoVis 2005, p. 57-64.]

    - Facet: Juxtapose, Partition, Superimpose
    - Reduce: Filter, Aggregate

## How?

Encode	Manipulate	Facet	Reduce
<ul style="list-style-type: none"> <li>Arrange                             <ul style="list-style-type: none"> <li>Express</li> <li>Separate</li> <li>Order</li> <li>Align</li> <li>Use</li> </ul> </li> <li>Map from categorical and ordered attributes                             <ul style="list-style-type: none"> <li>Color                                     <ul style="list-style-type: none"> <li>Hue</li> <li>Saturation</li> <li>Luminance</li> </ul> </li> <li>Size, Angle, Curvature, ...</li> <li>Shape                                     <ul style="list-style-type: none"> <li>+</li> <li>•</li> <li>■</li> <li>▲</li> </ul> </li> <li>Motion                                     <ul style="list-style-type: none"> <li>Direction, Rate, Frequency, ...</li> </ul> </li> </ul> </li> </ul>	<ul style="list-style-type: none"> <li>Change</li> <li>Select</li> <li>Navigate</li> </ul>	<ul style="list-style-type: none"> <li>Juxtapose</li> <li>Partition</li> <li>Superimpose</li> </ul>	<ul style="list-style-type: none"> <li>Filter</li> <li>Aggregate</li> <li>Embed</li> </ul>

What? Why? How?

# How to handle complexity: 1 previous strategy + 3 more

→ Derive

Manipulate	Facet	Reduce
<ul style="list-style-type: none"> <li>Change</li> <li>Select</li> <li>Navigate</li> </ul>	<ul style="list-style-type: none"> <li>Juxtapose</li> <li>Partition</li> <li>Superimpose</li> </ul>	<ul style="list-style-type: none"> <li>Filter</li> <li>Aggregate</li> <li>Embed</li> </ul>

- derive new data to show within view
- change view over time
- facet across multiple views
- reduce items/attributes within single view

# Manipulate

Change over Time	Navigate
<ul style="list-style-type: none"> <li>Item Reduction</li> <li>Zoom                             <ul style="list-style-type: none"> <li>Geometric or Semantic</li> </ul> </li> <li>Pan/Translate</li> <li>Constrained</li> </ul>	<ul style="list-style-type: none"> <li>Attribute Reduction                             <ul style="list-style-type: none"> <li>Slice</li> <li>Cut</li> <li>Project</li> </ul> </li> </ul>

# Change over time

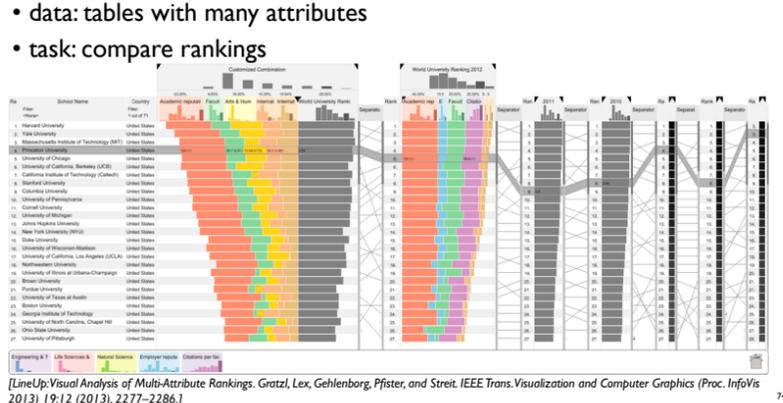

- change any of the other choices
  - encoding itself
  - parameters
  - arrange: rearrange, reorder
  - aggregation level, what is filtered...
- interaction entails change

# Idiom: Re-encode System: Tableau

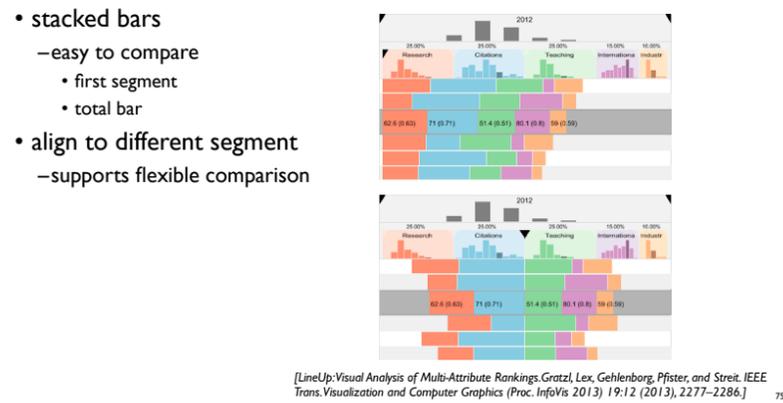

made using Tableau, <http://tableausoftware.com>

# Idiom: Reorder System: LineUp

[LineUp: Visual Analysis of Multi-Attribute Rankings. Gratzl, Lex, Gehlenborg, Pfister, and Streit. IEEE Trans. Visualization and Computer Graphics (Proc. InfoVis 2013) 19:12 (2013), 2277–2286.]

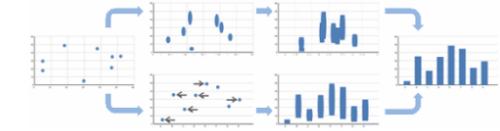

# Idiom: Realign System: LineUp

[LineUp: Visual Analysis of Multi-Attribute Rankings. Gratzl, Lex, Gehlenborg, Pfister, and Streit. IEEE Trans. Visualization and Computer Graphics (Proc. InfoVis 2013) 19:12 (2013), 2277–2286.]

# Idiom: Animated transitions

- smooth interpolation from one state to another
  - alternative to jump cuts, supports item tracking
  - best case for animation
  - staging to reduce cognitive load
- example: animated transitions in statistical data graphics

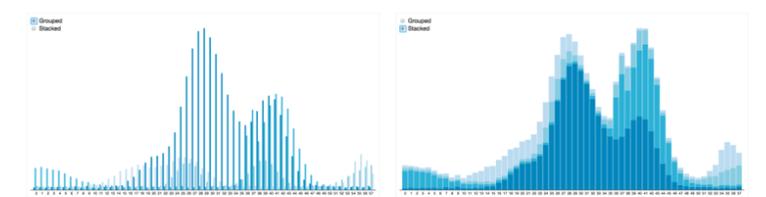

video: [vimeo.com/19278444](http://vimeo.com/19278444)

[Animated Transitions in Statistical Data Graphics. Heer and Robertson. IEEE TVCG (Proc. InfoVis 2007) 13(6):1240-1247, 2007]

# Idiom: Animated transitions - visual encoding change

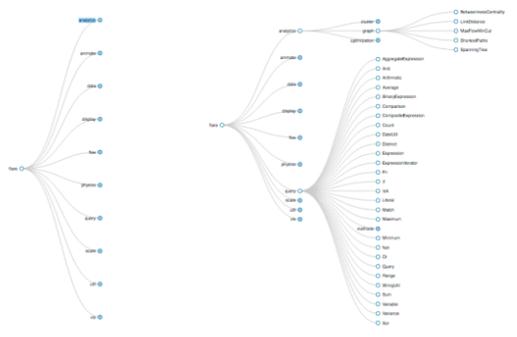

- smooth transition from one state to another
  - alternative to jump cuts, supports item tracking
  - best case for animation
  - staging to reduce cognitive load

[Stacked to Grouped Bars] (<http://bl.ocks.org/mbostock/3943967>)

# Idiom: Animated transition - tree detail

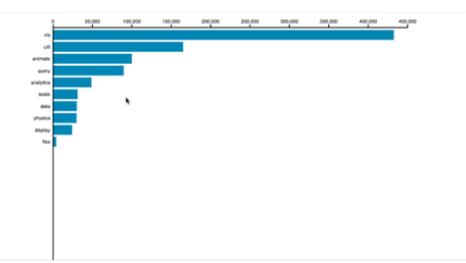

- animated transition
  - network drilldown/rollup

[Collapsible Tree] (<https://bl.ocks.org/mbostock/4339083>)

# Idiom: Animated transition - bar detail

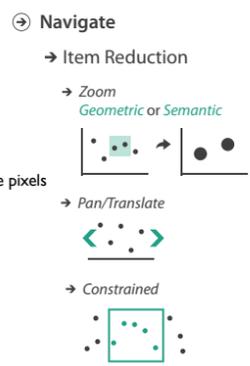

- example: hierarchical bar chart
  - add detail during transition to new level of detail

[Hierarchical Bar Chart] (<https://bl.ocks.org/mbostock/1283663>)

# Navigate: Changing item visibility

- change viewpoint
  - changes which items are visible within view
  - camera metaphor
    - zoom
      - geometric zoom: familiar semantics
      - semantic zoom: adapt object representation based on available pixels
        - » dramatic change, or more subtle one
    - pan/translate
    - rotate
      - especially in 3D
  - constrained navigation
    - often with animated transitions
    - often based on selection set

## Outline

- **Session 1 10-11:30am**
  - Data Visualization Pitfalls to Avoid
  - Introduction
  - Color
  - Space: 2D vs 3D
- **Session 2 12:30-3pm**
  - Visualization Analysis & Design, In More Depth
  - Marks and Channels, Perception
  - Arrange Tables
  - Arrange Spatial Data
  - Arrange Networks
  - Manipulate: Change, Select, Navigate
  - Facet: Juxtapose, Partition, Superimpose
  - Reduce: Filter, Aggregate

<http://www.cs.ubc.ca/~tmm/talks.html#vad17can-aft>

@tamaramunzner

## Facet

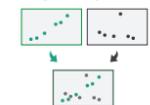

### Juxtapose

### Partition

### Superimpose

## Juxtapose and coordinate views

→ Share Encoding: Same/Different

→ Linked Highlighting

→ Share Data: All/Subset/None

→ Share Navigation

## Idiom: Linked highlighting

### System: EDV

- see how regions contiguous in one view are distributed within another
- powerful and pervasive interaction idiom

- encoding: different
- *multiform*
- data: all shared

[Visual Exploration of Large Structured Datasets. Wills. Proc. New Techniques and Trends in Statistics (NTTS), pp. 237–246. IOS Press, 1995.]

## Idiom: bird's-eye maps

### System: Google Maps

- encoding: same
- data: subset shared
- navigation: shared
- bidirectional linking

- differences
- viewpoint
- (size)

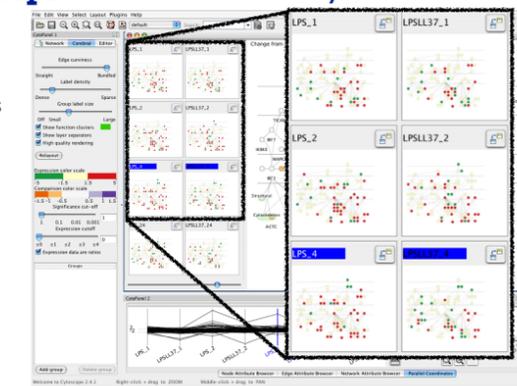

- **overview-detail**

[A Review of Overview+Detail, Zooming, and Focus+Context Interfaces. Cockburn, Karlson, and Bederson. ACM Computing Surveys 41:1 (2008), 1–31.]

## Idiom: Small multiples

### System: Cerebral

- encoding: same
- data: none shared
- different attributes for node colors
- (same network layout)
- navigation: shared

[Cerebral: Visualizing Multiple Experimental Conditions on a Graph with Biological Context. Barsky, Munzner, Gardy, and Kincaid. IEEE Trans. Visualization and Computer Graphics (Proc. InfoVis 2008) 14:6 (2008), 1253–1260.]

## Coordinate views: Design choice interaction

		Data		
		All	Subset	None
Encoding	Same	Redundant	Overview/Detail	Small Multiples
	Different	Multiform	Multiform, Overview/Detail	No Linkage

- why juxtapose views?

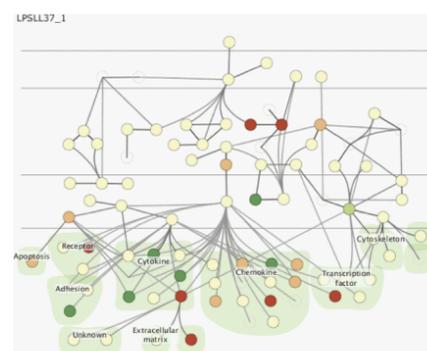

– benefits: eyes vs memory

- lower cognitive load to move eyes between 2 views than remembering previous state with single changing view

– costs: display area, 2 views side by side each have only half the area of one view

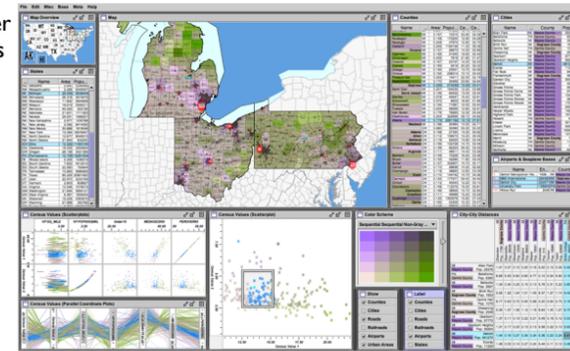

## Why not animation?

- disparate frames and regions: comparison difficult
- vs contiguous frames
- vs small region
- vs coherent motion of group
- safe special case
- animated transitions

## System: Improve

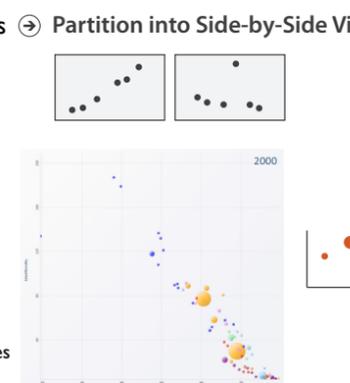

- investigate power of multiple views
- pushing limits on view count, interaction complexity
- how many is ok?
  - open research question
- reorderable lists
  - easy lookup
  - useful when linked to other encodings

[Building Highly-Coordinated Visualizations In Improve. Weaver. Proc. IEEE Symp. Information Visualization (InfoVis), pp. 159–166, 2004.]

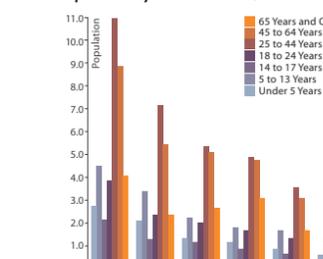

## Partition into views

- how to divide data between views
  - split into regions by attributes
  - encodes association between items using spatial proximity
  - order of splits has major implications for what patterns are visible
- no strict dividing line
  - view: *big/detailed*
    - contiguous region in which visually encoded data is shown on the display
  - glyph: *small/iconic*
    - object with internal structure that arises from multiple marks

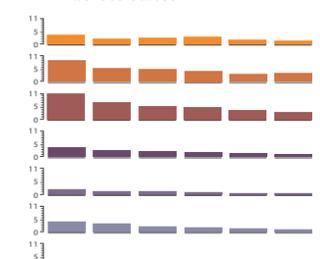

## Partitioning: List alignment

- single bar chart with grouped bars
- split by state into regions
  - complex glyph within each region showing all ages
- compare: easy within state, hard across ages

- small-multiple bar charts
- split by age into regions
  - one chart per region
- compare: easy within age, harder across states

## Partitioning: Recursive subdivision

### System: HIVE

- split by neighborhood
- then by type
- then time
  - years as rows
  - months as columns
- color by price
- neighborhood patterns
  - where it's expensive
  - where you pay much more for detached type

## Partitioning: Recursive subdivision

### System: HIVE

- switch order of splits
  - type then neighborhood
- switch color
  - by price variation
- type patterns
  - within specific type, which neighborhoods inconsistent

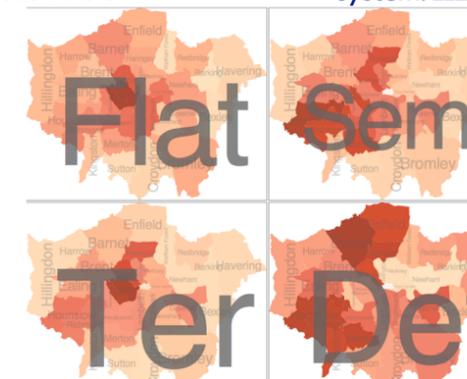

[Configuring Hierarchical Layouts to Address Research Questions. Slingsby, Dykes, and Wood. IEEE Transactions on Visualization and Computer Graphics (Proc. InfoVis 2009) 15:6 (2009), 977–984.]

## Partitioning: Recursive subdivision

### System: HIVE

- different encoding for second-level regions
  - choropleth maps

[Configuring Hierarchical Layouts to Address Research Questions. Slingsby, Dykes, and Wood. IEEE Transactions on Visualization and Computer Graphics (Proc. InfoVis 2009) 15:6 (2009), 977–984.]

## Partitioning: Recursive subdivision

### System: HIVE

- size regions by sale counts
  - not uniformly
- result: treemap

[Configuring Hierarchical Layouts to Address Research Questions. Slingsby, Dykes, and Wood. IEEE Transactions on Visualization and Computer Graphics (Proc. InfoVis 2009) 15:6 (2009), 977–984.]

## Superimpose layers

- **layer**: set of objects spread out over region
  - each set is visually distinguishable group
  - extent: whole view
- design choices
  - how many layers, how to distinguish?
    - encode with different, nonoverlapping channels
    - two layers achievable, three with careful design
  - small static set, or dynamic from many possible?

### Superimpose Layers

97

## Static visual layering

- foreground layer: roads
  - hue, size distinguishing main from minor
  - high luminance contrast from background
- background layer: regions
  - desaturated colors for water, parks, land areas
- user can selectively focus attention
- “get it right in black and white”
  - check luminance contrast with greyscale view

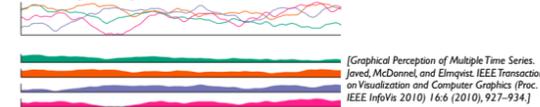

[Get it right in black and white. Stone. 2010. <http://www.stones.com/wordpress/2010/03/get-it-right-in-black-and-white>]

98

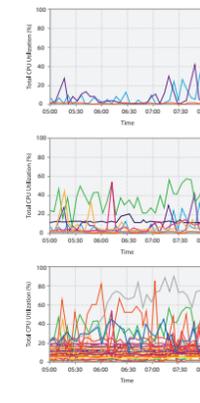

## Superimposing limits

- few layers, but many lines
  - up to a few dozen
  - but not hundreds
- superimpose vs juxtapose: empirical study
  - superimposed for local, multiple for global
  - tasks
    - local: maximum, global: slope, discrimination
  - same screen space for all multiples vs single superimposed

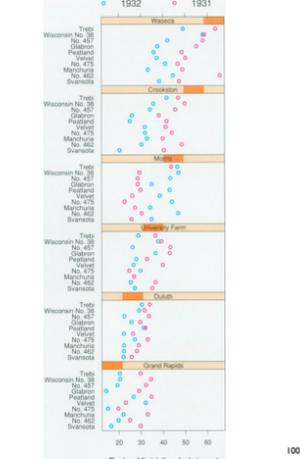

## Idiom: Trellis plots

- superimpose within same frame
  - color code by year

99

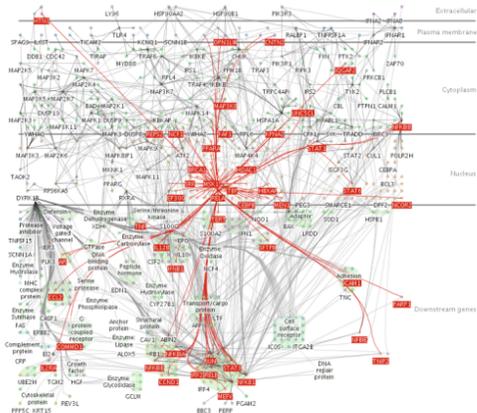

100

## Dynamic visual layering

- interactive, from selection
  - lightweight: click
  - very lightweight: hover
- ex: 1-hop neighbors

### System: Cerebral

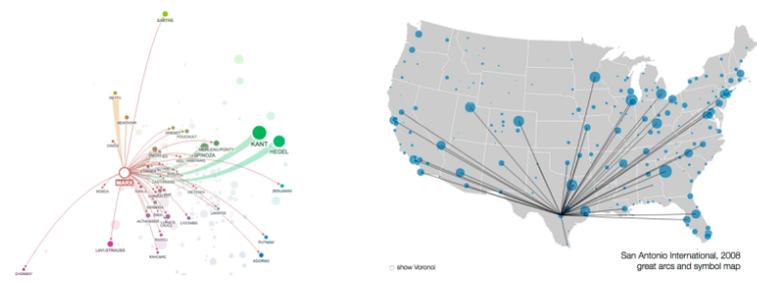

[Cerebral: a Cytoscape plugin for layout of and interaction with biological networks using subcellular localization annotation. Barsky, Gady, Hancock, and Munzner. *Bioinformatics* 23:8 (2007), 1040–1042.]

101

## Dynamic visual layering

- one-hop neighbour highlighting demos: click vs hover

<http://marianoerke.de/edgemaps/demo/> <http://mbostock.github.io/d3/talk/2011116/airports.html>

102

    - Manipulate: Change, Select, Navigate
    - Facet: Juxtapose, Partition, Superimpose
    - Reduce: Filter, Aggregate

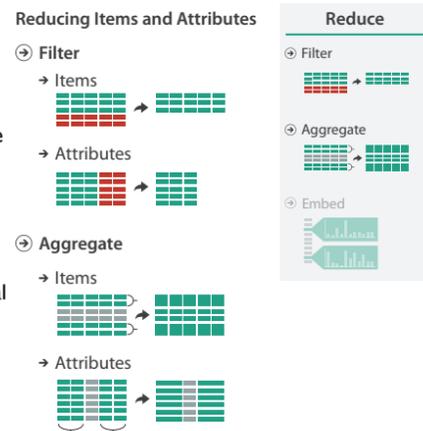

<http://www.cs.ubc.ca/~tmm/talks.html#vad17can-aft>

@tamaramunzner

104

## Reduce items and attributes

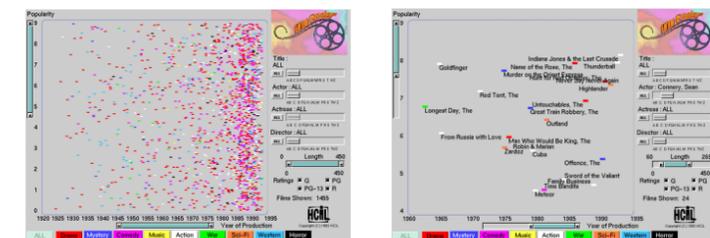

- reduce/increase: inverses
- filter
  - pro: straightforward and intuitive
    - to understand and compute
  - con: out of sight, out of mind
- aggregation
  - pro: inform about whole set
  - con: difficult to avoid losing signal
- not mutually exclusive
  - combine filter, aggregate
  - combine reduce, change, facet

105

## Idiom: dynamic filtering

- item filtering
- browse through tightly coupled interaction
  - alternative to queries that might return far too many or too few

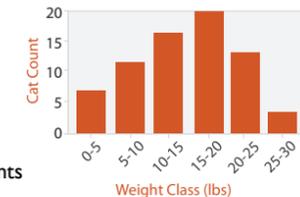

[Visual information seeking: Tight coupling of dynamic query filters with starfield displays. Ahlberg and Shneiderman. *Proc. ACM Conf. on Human Factors in Computing Systems (CHI)*, pp. 313–317, 1994.]

106

## System: FilmFinder

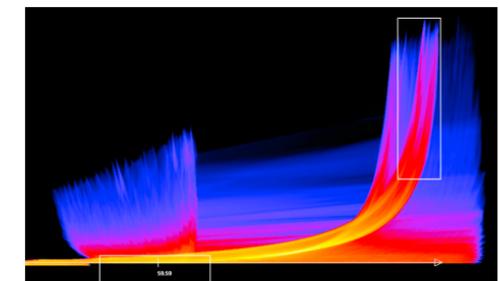

## Idiom: histogram

- static item aggregation
- task: find distribution
- data: table
  - new table: keys are bins, values are counts
- derived data
  - pattern can change dramatically depending on discretization
  - opportunity for interaction: control bin size on the fly

## Continuous scatterplot

- static item aggregation
- data: table
  - key attribs x,y for pixels
  - quant attrib: overplot density
- dense space-filling 2D matrix
- color: sequential categorical hue + ordered luminance colormap

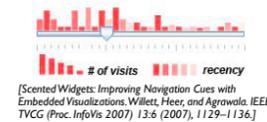

[Continuous scatterplots. Bachthaler and Weiskopf. *IEEE TVCG (Proc. Vis 08)* 14:6 (2008), 1428–1435. 2008.]

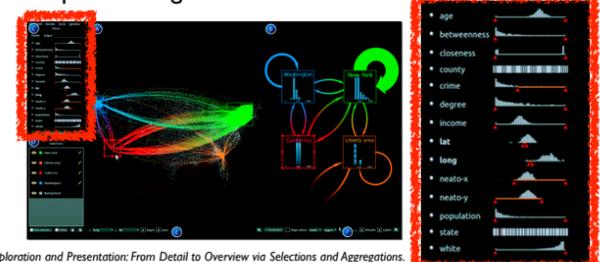

108

## Idiom: scented widgets

- augmented widgets show information scent
  - cues to show whether value in drilling down further vs looking elsewhere
- concise use of space: histogram on slider

[Scented Widgets: Improving Navigation Cues with Embedded Visualizations. Willett, Heer, and Agrawala. *IEEE TVCG (Proc. InfoVis 2007)* 13:6 (2007), 1129–1136.]

[Multivariate Network Exploration and Presentation: From Detail to Overview via Selections and Aggregations. van den Elzen, van Wijk, *IEEE TVCG* 20(12):2014 (Proc. InfoVis 2014).]

109

## Scented histogram bisiders: detailed

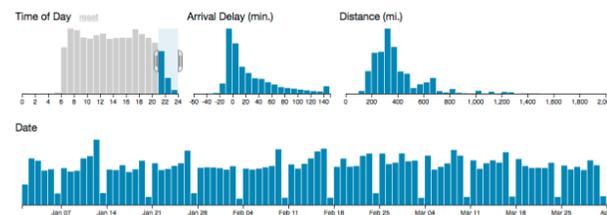

[ICLIC: Interactive categorization of large image collections. van der Corput and van Wijk. *Proc. PacificVis 2016*.]

110

## Idiom: cross filtering

- item filtering
- coordinated views/controls combined
  - all scented histogram bisiders update when any ranges change

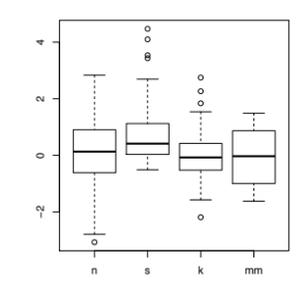

[<http://square.github.io/crossfilter/>]

## System: Crossfilter

## Idiom: boxplot

- static item aggregation
- task: find distribution
- data: table
  - 5 quant attribs
    - median: central line
    - lower and upper quartile: boxes
    - lower upper fences: whiskers
      - values beyond which items are outliers
  - outliers beyond fence cutoffs explicitly shown

[40 years of boxplots. Wickham and Stryjewski. 2012. [had.co.nz](http://had.co.nz)]

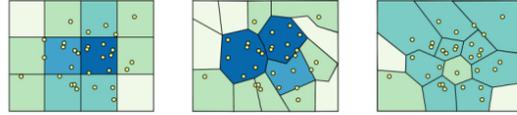

111

## Spatial aggregation

- MAUP: Modifiable Areal Unit Problem

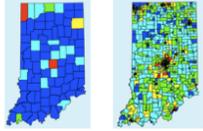

- gerrymandering (manipulating voting district boundaries) is only one example!

- zone effects

[[http://www.e-education.psu.edu/geog486/14\\_p7.html](http://www.e-education.psu.edu/geog486/14_p7.html), Fig 4.cg.6]

- scale effects

<https://blog.cartographica.com/blog/2011/11/19/the-modifiable-areal-unit-problem-in-gis.html>
