@tamaramunzner

How to decode a visualization? How to encode data visually?

www.cs.ubc.ca/~tmm/talks.html#visualise19

2

Decoding and encoding visual representations

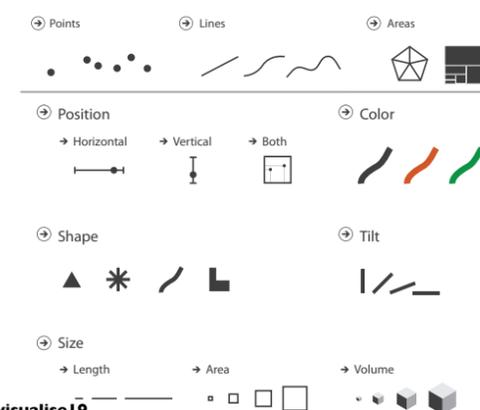

- systematic way to analyze structure

www.cs.ubc.ca/~tmm/talks.html#visualise19

Decoding and encoding: Marks and channels

- marks
 - geometric primitives
- channels
 - control appearance of marks

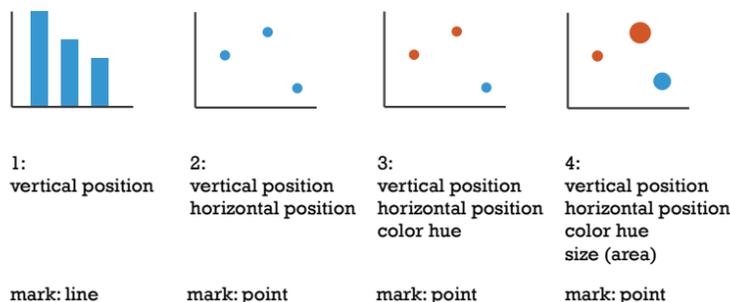

www.cs.ubc.ca/~tmm/talks.html#visualise19

4

Decoding and encoding visual representations

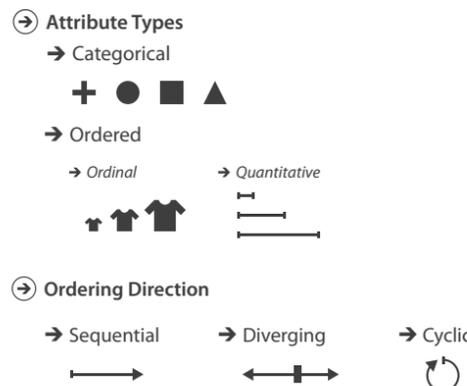

- systematic way to analyze structure
 - as combination of marks and channels

www.cs.ubc.ca/~tmm/talks.html#visualise19

How to choose?

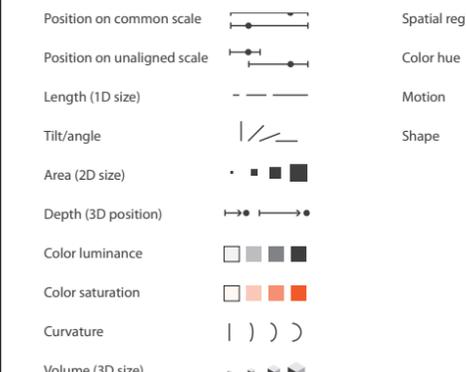

- characteristics of...
 - data
 - task
 - human perceptual system

www.cs.ubc.ca/~tmm/talks.html#visualise19

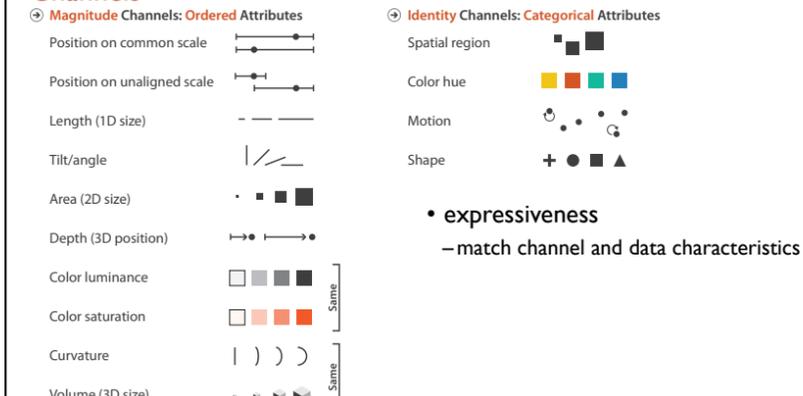

6

Channels

www.cs.ubc.ca/~tmm/talks.html#visualise19

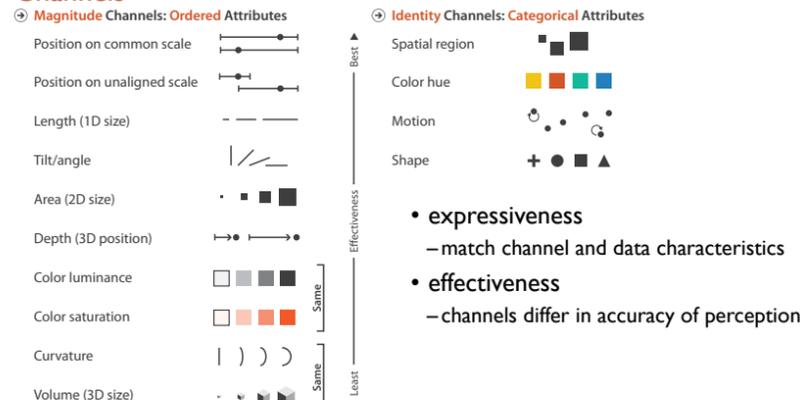

Channels

www.cs.ubc.ca/~tmm/talks.html#visualise19

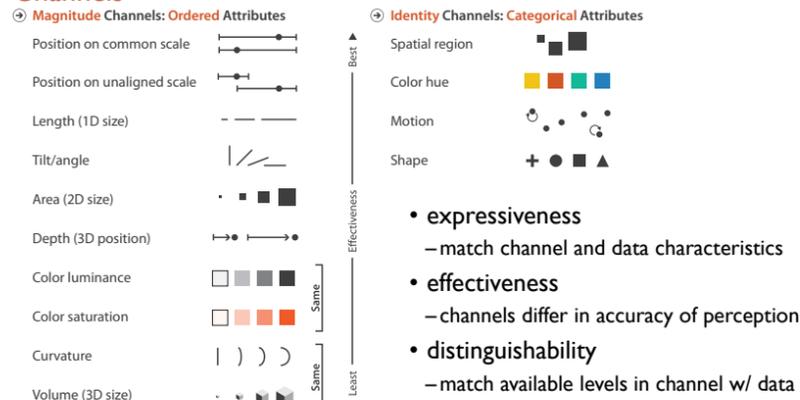

8

Channels

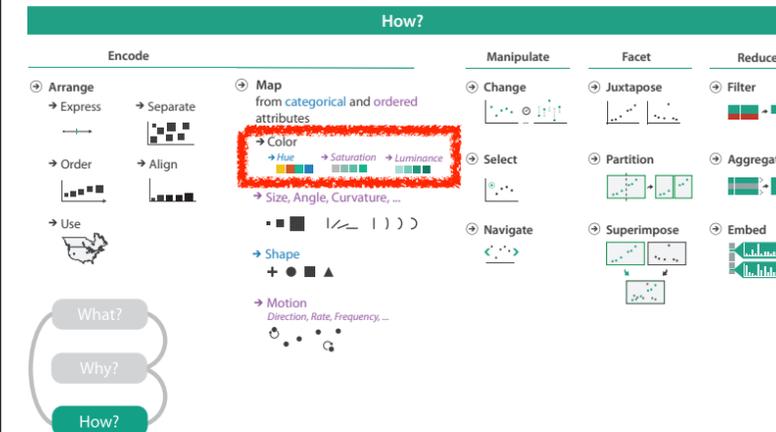

www.cs.ubc.ca/~tmm/talks.html#visualise19

Channels

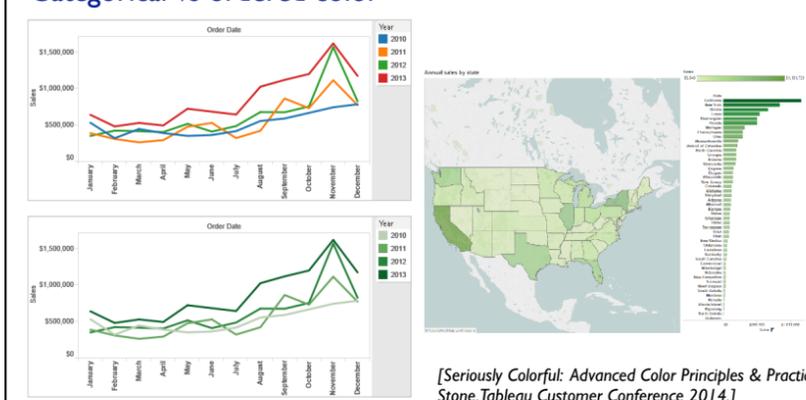

www.cs.ubc.ca/~tmm/talks.html#visualise19

10

www.cs.ubc.ca/~tmm/talks.html#visualise19

Categorical vs ordered color

www.cs.ubc.ca/~tmm/talks.html#visualise19

12

Decomposing color

- first rule of color: do not talk about color!
 - color is confusing if treated as monolithic
- decompose into three channels
 - ordered can show magnitude
 - luminance: how bright
 - saturation: how colorful
 - categorical can show identity
 - hue: what color
 - caveat: not well supported by current tools
- channels have different properties
 - what they convey directly to perceptual system
 - how much they can convey: how many discriminable bins can we use?

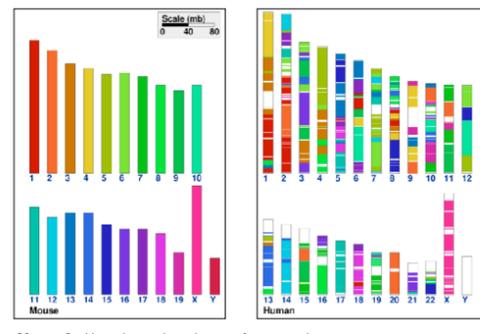

www.cs.ubc.ca/~tmm/talks.html#visualise19

13

Categorical color: limited number of discriminable bins

- human perception built on relative comparisons
 - great if color contiguous
 - surprisingly bad for absolute comparisons
- noncontiguous small regions of color
 - fewer bins than you want
 - rule of thumb: 6-12 bins, including background and highlights
- alternatives? other talks!

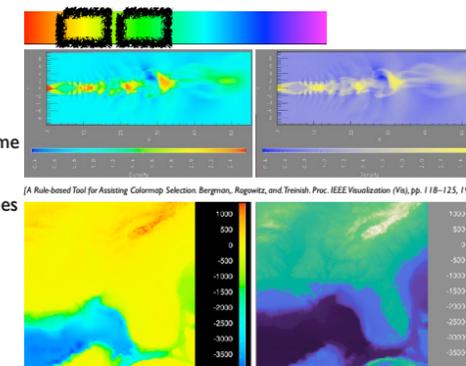

www.cs.ubc.ca/~tmm/talks.html#visualise19

14

Ordered color: Rainbow is poor default

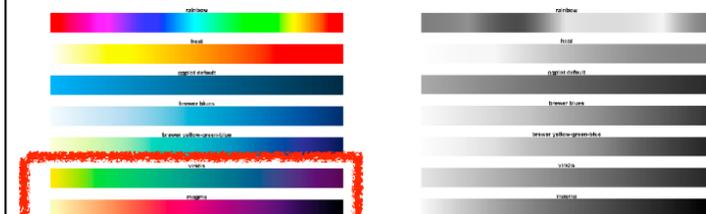

- problems
 - perceptually unordered
 - perceptually nonlinear
- benefits
 - small-scale structure: see & name
- alternatives
 - large-scale structure: fewer hues
 - known structure: segmented
 - have it both ways, small+large:
 - multiple hues
 - monotonically increasing luminance

www.cs.ubc.ca/~tmm/talks.html#visualise19

Viridis / Magma

- colorful, perceptually uniform, colorblind-safe, monotonically increasing luminance

<https://cran.r-project.org/web/packages/viridis/vignettes/intro-to-viridis.html>
